terraphase engineering

EXECUTIVE SUMMARY

At the request of the Los Angeles Unified School District (LAUSD), Terraphase Engineering Inc. (Terraphase) completed a Preliminary Environmental Assessment - Equivalent (PEA-E) study for the Alexander Hamilton High School located at 2955 South Robertson Boulevard in Los Angeles, California (the Site; Figure 1). The sampling plan for the PEA-E study was based on the findings of an August 2017 Phase I Environmental Site Assessment (Phase I ESA; Roux Associates, Inc. 2017), as modified by input from the Office of Environmental Health and Safety (OEHS 2018). This PEA-E summarizes historical land use, and outlines the approach and results from recent assessment during 2018 and 2019. This report was prepared in general conformance with the Preliminary Endangerment Assessment Guidance Manual published by the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC 2015a).

Roux's Phase I ESA indicates that the Site has been occupied by the school campus since 1931. Limited residential use on the Southwest portion of the Site was noted to have occurred until 1977 when Kincardine Avenue was noted as being rerouted to south of the Site (Roux 2017). The Site is owned and operated by the LAUSD. The current configuration of the school includes classroom buildings (main building, laboratory classroom building, humanities classroom building and technology classroom building), portable classroom units, a photography studio, an arts building, storage structures, two gymnasiums with locker rooms, a cafeteria, an assembly hall, an outdoor gravel track and football field with bleacher seating, a parking structure with elevated tennis courts, a baseball field, paved parking area, paved outdoor areas, and landscaping. The Site is bounded by residential areas to the north, west and south, and mixed use residential/commercial to the east.

LAUSD intends to remove four buildings (the Laboratory Classrooms, Humanities Classrooms, Photo Studio, and Music Building) and several ancillary structures from the Site (Figure 2), construct new classroom buildings, a central plant, and new landscaped areas in their place, and modernize the athletic fields.

The primary objectives of this PEA-E were to screen shallow soil at the Site for chemicals of potential concern (COPCs), including arsenic, lead, polychlorinated biphenyls (PCBs), organochlorine pesticides (OCPs), total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), and dioxins/furans in accordance with typical DTSC guidance for school sites; to evaluate the health risk based on soil results for COPCs; and to screen soil vapor at the Site for VOCs in the vicinity near potential off-Site and on-Site sources of VOCs.

Field sampling activities for the PEA-E study were conducted between August 2018 and November 2019. Field activities included sampling of shallow and deep soil samples for chemicals of potential concern (COPCs) throughout the property in support of the Alexander Hamilton High School Modernization Project. Additionally, soil vapor probes were installed to assess volatile constituents in soil vapor that may be present due to historical uses and potential off-Site sources. Figure 2 present a Site layout showing soil sample and soil vapor probe locations. Large scale maps showing the locations of step-out samples are presented as Figure 3a through 3i. Boring logs are included as Appendix A. A photograph log of representative activities completed during the PEA-E study is included as Appendix B.

Shallow soil and soil vapor sample results from the PEA-E survey indicate that select COPCs, including arsenic and lead in soil and benzene, ethylbenzene, and tetrachloroethene in soil vapor, are present at concentrations above the Site-specific action levels (SSALs) typical of school sites in California. The PEA-E survey results in the vicinity of the Humanities Classrooms, the Photo Studio, the west side of the Laboratory Classrooms, the north side of the Girls' Gym, the west side of portable building (B1, B2), and the north central portion of the Site indicate that elevated levels of arsenic and lead were reported in shallow soil samples analyzed. Conservative estimates of cumulative cancer risk estimates due to vapor intrusion exposure at eight locations were greater than DTSC's recommended risk management goals, and additional assessment and/or remedial action at these locations is warranted.

Based on these results, Terraphase recommends that a Removal Action Workplan (RAW) be prepared for the target COPCs in shallow soil and soil vapor in the above locations related to environmental concerns prior to or during the upcoming construction effort. Large scale figures showing the soil sample locations and suggested excavation boundaries are includes as Figures 6a to 6i. Assuming removal of the arsenic and lead concentrations in soil above SSALs, conservative estimates of cumulative cancer risk and noncancer hazard index (HI) due to direct contact exposure to remaining COPCs in soil were equal to or below DTSC's risk management goals. As such, additional risk management action to address potential direct contact exposures to soil at the Site would not be warranted. Potential removal or mitigation measures to address cancer risks related to vapor intrusion in Site buildings should also be presented and evaluated in the RAW.

CERTIFICATION

This Preliminary Environmental Assessment Equivalent report (PEA-E) has been prepared by, or under the direct supervision of a California Professional Geologist.

1.0 INTRODUCTION

At the request of the Los Angeles Unified School District (LAUSD) Terraphase Engineering Inc. (Terraphase) has completed a Preliminary Environmental Assessment - Equivalent (PEA-E) for the Alexander Hamilton High School located at 2955 South Robertson Boulevard in Los Angeles, California (the Site; Figure 1). The assessment followed a modified sampling plan prepared by Roux Associates, Inc. (Roux) in April 2018, Updated Preliminary Environmental Assessment Equivalent (PEA-E) Proposed Sampling Summary (Roux 2018), as modified by input from the LAUSD Office of Environmental Health and Safety (OEHS; 2018). The sampling plan was based on the findings of an August 2017 Phase I Environmental Site Assessment (Phase I ESA; Roux 2017) in support of the Alexander Hamilton High School Comprehensive Modernization Project.

LAUSD intends to remove four buildings (the Laboratory Classrooms, Humanities Classrooms, Photo Studio, and Music Building) and several ancillary structures from the Site (Figure 2), construct new classroom buildings, a central plant, and new landscaped areas in their place, and modernize the athletic fields. This PEA-E summarizes Site description and background information, the results of Site historical land use and research, presents the field and laboratory methods and results from Site assessment activities conducted in the project area in 2018 and 2019, and presents the results of a human health risk assessment screening evaluation. This report was prepared in general conformance with the Preliminary Endangerment Assessment Guidance Manual published by the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC; 2015a).

1.1 Site Description

The Site is located at 2955 South Robertson Boulevard in Los Angeles, California (Figures 1 and 2). The Site is developed with the Alexander Hamilton High School campus and comprises approximately 20.75 acres of land, identified as Los Angeles County Assessor's Parcel Number (APN) 4311-031-901.

The Site is owned and operated by the LAUSD. Buildings at the Site include four classroom buildings, portable classrooms, photography building, arts building, storage structures, two gymnasiums, cafeteria, and assembly hall. Other developments on the Site include an outdoor track and football field, parking structure with elevated tennis courts, baseball field and paved parking areas. The northwest portion of the Site is developed with Cheviot Hills Continuing School. The Site is bounded by residential areas to the north, west and south, and mixed use residential/commercial to the east.

1.2 Background

The Site has been used as the Alexander Hamilton High School campus since approximately 1931. Roux completed a Phase I ESA for the Site in August 2017, which included a review of historical records, including aerial imagery and topographic maps.

1.3 Regional Geology

The Site lies within the Peninsular Ranges Province. Review of the geologic map indicates that the Site is underlain by Quaternary aged alluvial gravel, sand and silt-clay, derived mostly from the Santa Monica Mountains (United States Geological Survey [USGS] 2005).

1.4 Regional Hydrogeology

The Site is located within the Santa Monica Subbasin, located within the Coastal Plain of Los Angeles Groundwater Basin. This basin has beneficial uses for municipal and irrigation supply (Los Angeles Regional Water Quality Control Board 2014). Review of Roux's Phase I ESA for the Site indicates that the depth to groundwater below the Site is unknown, but groundwater was measured at a depth of 35 ft below ground surface (bgs) at a facility located immediately adjacent to the Site (Roux, 2017).

1.5 Environmental Setting

The purpose of the PEA-E is to identify if environmental issues will need to be mitigated either prior to or during upcoming construction efforts at the Site. Information for historic land use and environmental setting, as presented in the Phase I ESA, is summarized below.

1.5.1 School Property

The Site has been occupied by the school campus since 1931. Limited residential use on the Southwest portion of the Site was noted to have occurred until 1977 when Kincardine Avenue was noted as being rerouted to south of the Site (Roux 2017).

The current configuration of the school includes four classroom buildings (main building, laboratory classroom building, humanities classroom building and technology classroom building), portable classroom units, a photography studio, an arts building, storage structures, two gymnasiums with locker rooms, a cafeteria, an assembly hall, an outdoor gravel track and football field with bleacher seating, a parking structure with elevated tennis courts, a baseball field, paved parking area, paved outdoor areas, and landscaping.

Findings from the Phase I ESA are discussed in Section 1.6, below.

1.6 Discussion of Phase I ESA Items

The following recognized environmental conditions (RECs) in connection with the Site were identified in the Phase I ESA (Roux 2017):

- Based on Site observations and historical records, two boilers are located onsite; one in the basement of the main building constructed in 1931, and one in the ground floor of the girl's gymnasium building constructed in 1936. Floor drains were observed in both boiler rooms. Based on potential historical use of fuel to operate the boilers, it is possible that subsurface is impacted in these areas.

- A photography studio building has been located at the south-central portion of the Site since approximately 1964. During Site reconnaissance, the studio was observed to contain dark rooms with photo-processing chemicals. Plugged floor drains were also observed within the studio. Based on the nature of the operations in the studio, it is possible that photo-processing chemicals may potentially impact the subsurface in this area.

- Based on Site observations and historical Site plans from 1966, a clarifier is located in the parking area north of the arts building and was associated with the former auto shop area. Based on the age of the clarifier and nature of its operation, it is likely that it may have leaked over time.

- Elevators were observed in the humanities and laboratory classroom buildings, constructed approximately in the 1960s. Personnel at the school were not aware of the maintenance schedule of if hydraulic fluids may contain polychlorinated biphenyls (PCBs). Based on the age of the elevators, it is possible that they may have leaked and impacted the surrounding subsurface.

- The current maintenance materials shed was historically used as a hazardous materials storage shed until the early 2000s, containing small quantities of vehicle maintenance fluids. It is possible that maintenance fluids or chemicals stored in the shed may have been released, potentially impact the surrounding subsurface.

- Site structures planned for demolition have been located at the Site since the 1960s. Due to their age, lead-based paint (LBP) may have been used in construction and maintenance activities and therefore may impact shallow soils in the immediate vicinity of the buildings planned for demolition. Also, organochlorine pesticides (OCPs) may have been historically applied to soil around the vicinity of the buildings.

- Based on historical records, a former rifle range was located at the northwest corner of the Site, in the areas of the current Cheviot Hills Continuing School. Due to its historical usage, shallow soils may contain lead and/or other metals. This area was not included in the Site redevelopment plans and therefore was not investigated during this PEA-E.

- Historical Site plans from 1944 indicated that a former cesspool was located at the southeast of the corner of the Site, south of the humanities classroom building. Due to historical laboratory classrooms, it is possible chemicals may have been released into the cesspool impacting the subsurface in the area.

- Based on historical records, a spray booth and incinerator were located in the southern side of the former shop building. Due to the nature of the operations; paints automotive chemicals and/or fuels may have impacted the surrounding subsurface.

- Below-grade hydraulic lifts, parts washier, oil drain and moist pits were formerly located in the auto area, and finish rooms were located in the metal shop area and wood shop area of the industrial arts building based on historical Site plans from 1966. According to facility personnel,

these features were removed from the Site in April 2017, however no documentation was available regarding their removal. It is possible that PCB-containing hydraulic fluid from the lifts and chemicals associated with automotive repair may have affected the subsurface in these areas.

- Based on historical records, numerous historical Site structures were located throughout the Site prior to the 1960s, including three larger former buildings and thirty-six former smaller structures. Based on the age of the former buildings, LBP may have been used and may be present in surrounding shallow soils. Also, based on historical practices OCPs may have been applied to soils at or in the vicinity of historical structures.

- Former street extensions were historically located on the southern to central portions of the Site, including Durango Avenue, Livonia Avenue, Ivy Street and Kincardine Avenue. Historical Site plans dated 1944 noted “rock and oil paving” on Kincardine Avenue. The former on-Site presence of streets creates the potential of automotive related chemicals and/or metal compounds due to the use of former leaded gasoline and wear of tires. It is possible that soil in the vicinity of the former streets may be impacted.

- Distribution Station 20 operated by the Los Angeles Department of Water and Power, is located immediately adjacent to the western portion of the Site and has operated since at least 1933. Due to the nature of historical operation, it is likely that electrical equipment containing PCBs may have impacted the subsurface.

- A dry cleaner facility, Fancy Cleaners is located immediately adjacent to the northeast of the Site and has operated from at least 1951 to present. During previous investigations of the former Pierce Auto Station, PCE and TCE was detected in groundwater monitoring wells. According to hazardous waste disposal operations, Fancy Cleaners has document current and historical operations using chlorinated solvents through 2001. Due to the length and nature of its operation and likely impact to the subsurface, chlorinated solvents may have migrated to impact the Site and/or create a vapor intrusion concern.

- Multiple current or former service stations were located immediately adjacent to the east and northeast of the Site. No additional information, such as subsurface investigations or closure data, was available for review. A limited soil vapor investigation was conducted in 2001 over a small portion of the Site, following guidance and reporting limits applicable at the time of the investigation. Due to the nature and length of the historical operations, total petroluem hydrocarbons (TPH) as gasoline and benzene may have impacted the subsurface and migrated to potentially impact the Site.

PCBs were used widely in caulking and elastic sealant materials, particularly from 1950 through the 1970s until PCBs were banned in 1979 (United States Environmental Protection Agency [USEPA] 2015). PCBs may exist in soil near exterior caulking present in buildings meeting the age criteria and adjacent to unpaved areas (DTSC 2006b). PCBs in shallow soil are commonly evaluated at the PEA-E stage of assessment at school sites that meet the age criteria. Although not identified as a REC by Roux,

screening for PCBs was conservatively included in the PEA-E for select samples, as specified in the PEA-E Proposed Sampling Summary (Roux 2018).

The PEA-E study followed a modified sampling plan prepared by Roux in April 2018, as modified by input from the OEHS (OEHS 2018). The PEA-E study was limited to sampling of soil at the Site for contaminants of potential concern, including Title 22 metals (primarily arsenic and lead), volatile organic compounds (VOCs), TPH as gasoline, diesel, and oil (TPH-g/d/o), semivolatile organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), PCBs, and OCPs in general accordance with typical DTSC guidance for school sites; and to sampling of soil vapor at the Site for VOCs.

2.0 SAMPLING ACTIVITIES

Field sampling activities for the PEA-E study were conducted between August 2018 and November 2019. Field activities included sampling of shallow and deep soil samples for chemicals of potential concern (COPCs) throughout the property in support of the Alexander Hamilton High School Modernization Project. Additionally, soil vapor probes were installed to assess volatile constituents in soil vapor that may be present due to historical uses and potential off-Site sources. Figure 2 present a Site layout showing soil sample and soil vapor probe locations. Large scale maps showing the locations of step-out samples are presented as Figure 3a through 3i. Boring logs are included as Appendix A. A photograph log of representative activities completed during the PEA-E study is included as Appendix B.

Field activities were performed on the following dates: August 30 and 31, September 10, 12 and 19, and October 20 of 2018, and February 18, June 10 to 14, August 12, 14 and 16, and November 23, 25, and 26 of 2019. A total of 116 primary borings and 64 step-out borings were advanced. Boring SV54, originally proposed to be advanced to the west of the Photo Lab, was moved approximately 40 feet to the northwest to avoid a utility corridor (Figure 2). Borings were advanced using hand auger and direct push drilling methods. Soil vapor probes were constructed in 37 of the borings. Soil samples were collected from depths ranging from 0.5 feet bgs to 30 feet bgs and analyzed for lead, arsenic, remaining Title 22 metals, OCPs, VOCs, TPH-g/d/o, PCBs, PAHs, SVOCs, and/or dioxin/furans as listed in the sample matrix included as Table 1. Soil vapor samples were collected from depths ranging between 5 and 25 feet bgs and analyzed for VOCs and/or oxygenates. Soil analytical results are tabulated in Tables 2 through 6. Soil vapor analytical results are shown in Table 7. Laboratory analytical results for soil and soil vapor samples are included in Appendix C.

On February 28, 2019, a total of nine soil borings were advanced to collect soil samples throughout the Site for use in calculating a Site-specific background arsenic concentration. Soil samples were typically collected every five feet until approximately 30 feet bgs. The background arsenic concentration calculation is discussed in Section 4.1.

Additional soil borings were advanced in June, August, and November 2019 for the purposes of further assessing the extent of soil or soil vapor above screening levels. Borings were stepped out from the original sample location in three or four directions, as access and utility corridors allowed, and samples were labeled using the primary boring number plus a letter designation ("A" to the north and continuing in a clockwise direction). Locations requiring additional stepouts beyond the first step-out location were labeled by adding a second "A" (or appropriate letter) to the sample name. Step-out sampling was completed if a result was below the chemical-specific screening level or if a utility corridor or other access restriction such as a building was encountered. Large scale maps showing the step-out boring locations are included as Figures 3a to 3i.

Based on correspondence with OEHS, the following items identified in the Updated PEA-E Proposed Sampling Summary (Roux 2018) are outside the planned area of development or could not be assessed prior to building demolition. Samples were not collected in these areas.

- The Boys Gym will not be removed, therefore proposed borings B33 through B40 were not advanced.
- The former rifle range was located in the present location of the Cheviot Hills Continuing School. This area will not be redeveloped, therefore the proposed borings B75 through B78 were not advanced.
- Interior samples B87 in the Girls' Gym boiler room, B88 adjacent to the Humanities Classrooms elevator, and B89 adjacent to the Laboratory Classrooms elevator were not advanced. It was not feasible to advance the boring inside the boiler room, and the two borings adjacent to the elevators should be assessed after building demolition.

Sampling activities are described further below.

2.1 Objectives

Phase I ESA items identified required further evaluation to determine whether environmental issues need to be mitigated either prior to or during upcoming construction (Roux 2018; OEHS 2018). The primary objectives of this PEA-E were:

- To screen shallow soil at the Site for COPCs, including arsenic, lead, PCBs and OCPs in general accordance with typical DTSC guidance for school sites;
- To evaluate the Site health risk based on soil results for COPCs, including lead, arsenic, OCPs, PCBs, TPH, VOCs and SVOCs; and
- To screen soil vapor at the Site for VOCs in the vicinity near potential off-Site and on-Site sources of VOCs.

Specific objectives for each boring location are listed in Table 1 of the PEA-E Proposed Sampling Summary (Roux 2018).

2.2 Pre-Field Activities - Health and Safety Plan and Utility Clearance

This section describes work performed prior to commencement of the field investigation.

Terraphase prepared a project Health and Safety Plan (HASP) which established Site-specific health and safety protocols implemented by Terraphase staff during field activities. The HASP detailed the personal protective equipment (PPE) required for the work. Health and safety meetings were conducted in the field at the start of the project and each day before fieldwork began. A copy of the HASP was kept onsite during field activities.

Prior to Site work, Terraphase marked the Site boundaries with white marking paint and contacted Underground Service Alert (USA) for marking subsurface utilities in and around the Site at least two working days in advance of field sampling. For the field activities, USA issued ticket numbers A182401321-00A, A182921076-01A, A183191379-00A, A190421583-00A, B191560155-00B and

B192190354-00B, B192190360-00B, and B193240606 prior to Site work. Prior to Site work, private utility locators, either Pacific Coast Locators of La Crescenta, California or Spectrum Geophysics of Chatsworth, California, were contracted to identify underground utilities in the vicinity of each boring location. When necessary, select boring locations were adjusted to avoid conflicts with identified subsurface utilities.

Permits from the Los Angeles County Department of Public Health, Environmental Health were required for deeper soil borings performed on February 18, 2010. Permit SR0174608 was issued by the Department of Public Health for nine soil borings to a depth of approximately 30 ft. A copy of the permit is included in Appendix D.

2.3 Field Procedures – Soil Sampling and Soil Vapor Probe Installation

Following utility clearance, Terraphase subcontracted with Strongarm Environmental Field Services (Strongarm) to core asphalt or concrete and advance borings at locations shown on Figures 2 and 3a to 3i. Shallow soil borings were advanced using a hand auger. Soil borings were advanced deeper than 5 feet bgs using a DPT drill rig equipped with a dual tube continuous sampling system to depths ranging between 15 and 30 feet bgs. A continuous core of soil was collected at each boring location for lithologic logging and soil sample collection for laboratory analysis. Soil cores collected using the DPT rig were collected into acetate sleeves.

The lithology of the soil was described using the Unified Soil Classification System (USCS), for guidance, by Terraphase field staff working under the direction of a California Professional Geologist and recorded onto the soil boring logs. The soil was screened in the field for visual or olfactory indications of chemical impacts. Soil boring logs are presented in Appendix A.

Soil samples were collected at discrete depths at intervals outlined in Table 1. Soil sampling depths ranged from approximately 0.5 feet bgs to 30 feet bgs. Soil samples were collected in appropriate laboratory provided glassware. Soil samples were properly labeled, logged on chain-of-custody forms, placed in an ice chilled cooler, and relinquished to a courier or delivered by field staff under standard chain-of-custody protocol to either SunStar Laboratories (SunStar), located in Lake Forest, California, or Enthalpy Analytical, LLC (Enthalpy) located in Orange, California, both California-certified laboratories. Soil samples and equipment blanks collected in 2018 were analyzed by SunStar; soil samples and equipment blanks collected in 2019 were analyzed by Enthalpy. Borings advanced for the purpose of collecting shallow soil samples (up to 2.5 feet bgs) were backfilled with clean sand and patched to match surrounding surface conditions.

Following the advancement of soil borings, temporary soil vapor probes were installed at select borings at approximately 5 and 15 feet bgs to facilitate collection of soil vapor samples for laboratory analysis. Each soil-vapor sample location except for SV-04 consisted of one shallow and one deep sample. A one-inch long stainless steel soil-vapor sampling probe tip connected to ¼-inch Teflon tubing extending to the ground surface with a valve at the end. Deep sample probes were installed at approximately 15 feet bgs and shallow samples probes were installed at approximately 5 feet bgs. The boring was advanced at least 6 inches deeper than deep sample probe depth (or backfilled to this depth) and filled with sand up to the depth of the probe (i.e. from approximately 15.5 to 15 feet bgs). The deep soil vapor probe was

lowered into the boring and sand was added to a depth of 6 inches above the probe. The sand pack was topped with a transition seal of six inches of dry bentonite followed by hydrated bentonite. The boring was backfilled up to 5.5 feet bgs, then 6 inches of sand was placed up to the depth of the shallow probe. The shallow probe was lowered into the boring and sand added to a depth of 6 inches above the probe. The sand pack was topped with a transition seal of six inches of dry bentonite followed by hydrated bentonite. The boring was backfilled to the surface.

Following the appropriate equilibration period, soil vapor samples were collected in accordance with the Advisory Active Soil Gas Investigations (Soil Gas Advisory), prepared by California Environmental Protection Agency (Cal/EPA), DTSC, Los Angeles Regional Water Quality Control Board (RWQCB), and San Francisco RWQCB and last revised July 2015. Soil vapor samples were analyzed either using EPA Method 8260SV by a mobile lab or using EPA Method TO-15 by a fixed base lab. Soil vapor samples collected from 2018 to August 2019 were analyzed by Jones Environmental (Jones) of Santa Fe Springs, California; soil vapor samples collected in November 2019 were analyzed by H&P Mobile Geochemistry (H&P) of Carlsbad, California. After soil vapor sampling, probes were abandoned and patched to match surrounding surface conditions.

Reusable sampling equipment (e.g., hand auger bucket, drilling equipment) was decontaminated prior to sample collection and between boreholes. Decontamination procedures included removal of visible soil, followed by a rinse with non-phosphate detergent and tap water, rinse with tap water, and last rinse with deionized/distilled water.

2.4 Laboratory Analyses and Quality Control

The soil samples were analyzed as shown in Table 1. SunStar and Enthalpy analyzed select soil samples for arsenic and lead using USEPA Method 6020, OCPs using USEPA Method 8081A, PCBs using USEPA Method 8082, TPH-g/d/o using USEPA Method 8015M, Title 22 Metals using USEPA 6010B/7471A series, VOCs using USEPA Method 8260B, SVOCs using USEPA Method 8270C, and PAHs using USEPA Method 8270C SIM. In general, if a sample was analyzed for all Title 22 Metals using USEPA Method 6010B, arsenic and/or lead were not analyzed separately by USEPA Method 6020. Where the Total Threshold Limit Concentration (TTLC) lead or arsenic result was greater than 50 milligrams per kilogram (mg/kg), samples were further analyzed for lead or arsenic using the Waste Extraction Test (WET) preparation for Soluble Threshold Limit Concentration (STLC) and/or the toxicity characteristic leaching procedure (TCLP).

Field quality control samples included field duplicates (10%) and equipment blanks. The equipment blank was collected by pouring distilled water over the decontaminated hand auger bucket or direct-push drilling shoe and collecting the poured water in laboratory supplied sample containers. Field duplicates were analyzed similar to the original sample to maintain the required ratio of approximately one duplicate sample for every 10 field samples analyzed. The equipment blank samples were analyzed for the COPCs that were sampled for that day. The laboratory data package also included standard quality control for method blanks, matrix spike/ duplicates, surrogate recoveries, and laboratory control

samples/duplicates, as specified by the individual methods. The laboratory also assigned laboratory data qualifiers to data, as appropriate and in accordance with the individual methods.

Soil vapor samples were analyzed for VOCs using USEPA Method 8260SV or using USEPA Method TO-15. Quality control samples included field duplicates (10%) and method replicates (10%), if primary soil vapor samples were analyzed using USEPA Method 8260SV. In this case, replicate samples were also analyzed using USEPA Method TO-15. The laboratory data package also included standard quality control for method blanks, matrix spike/ duplicates, surrogate recoveries, and laboratory control samples/duplicates, as specified by the individual methods. The laboratory also assigned laboratory data qualifiers to data, as appropriate and in accordance with the individual methods.

Data validation was performed in accordance with the National Functional Guidelines for Superfund Organic Methods Data Review, (January 2017; USEPA-540-R-2017-002) and the National Functional Guidelines for Superfund Inorganic Methods Data Review, (January 2017; USEPA-540-R-2017-001), following the format used in the DTSC Data Validation Memorandum dated May 2, 2006, prepared for the Advanced Technology Laboratory Report ATV5976. The data validation memorandum (DVM) prepared for this investigation is included as Appendix E. As described in the DVM, field duplicate sample results were similar to original samples, as shown in Tables 2 through 7. All samples were analyzed as planned, with the exception of those noted in Section 2.0. Results for all equipment blanks were reported below the detection level for all compounds analyzed. Results for method blanks, surrogates and duplicate samples as required by the USEPA method appear acceptable. The data, as qualified, appears acceptable for the purposes of this PEA-E.

2.5 Abandonment of Soil Borings and Site Restoration

Following sample collection, shallow soil borings were backfilled with clean sand and tamped as specified by OEHS personnel. Soil vapor probes were destroyed by removing the probe tubing and patching with concrete. Borings completed under permit SR0174608 were abandoned by backfilling with bentonite cement grout using a tremie pipe. All borings were completed at the surface to match existing grade.

2.6 Investigative Derived Waste (IDW) Management

All personal protective equipment, surface cores, and miscellaneous materials used to complete the scope of work were properly disposed of according to applicable regulations in a municipal dumpster.

Six 55-gallon Department of Transportation approved drum containing soil cuttings and decontamination water were generated and temporarily stored onsite, pending characterization, profiling and lawful off-Site disposal. Two soil disposal profiles were generated for the Site, one from soil sampled November 2018 and one from soil sampled in January 2020.For waste characterization purposes, composite samples of drummed soil were collected and transported to Enthalpy for analysis of total petroleum hydrocarbons (gasoline, diesel, and motor oil ranges) using USEPA Method 8015M, Title 22 metals using USEPA Method 6010B/7471A, OCPs using USEPA Method 8081A, PCBs using USEPA Method 8082, and VOCs using USEPA Method 8260B. All soil was characterized as non-hazardous. Two

drums were removed from the Site on June 10, 2019, and transported to Soil Safe in Adelanto, California. Four additional drums were removed from the Site on February 19, 2020, and also transported to Soil Safe in Adelanto, California. Disposal Manifests are included as Appendix F.

3.0 RESULTS

The following sections summarize results for the soil and soil vapor sampling conducted at the Site between August 31, 2018 and November 26, 2019. Boring locations are shown on Figures 2 and 3a to 3i. Soil analytical results are presented in Tables 2 through 6, and laboratory analytical reports and chain-of-custody documentation are presented in Appendix C.

3.1 Lithology

To facilitate soil sampling during the PEA-E study, 128 shallow soil borings were advanced to a maximum depth of 2.5 feet bgs, and 52 soil borings were advanced to a maximum depth of 30 feet bgs (Appendix A). Groundwater was not encountered in the soil borings during the PEA-E study.

Shallow soil borings were typically advanced in paved areas with approximately 3 inches of asphalt or concrete at the surface. Where possible, borings were advanced in unpaved or athletic field areas. Soil type observed to 5 feet bgs (Appendix A) generally consisted of fine -grained soils of predominantly silt or clay. Between approximately 5 and 20 feet bgs, soil type generally consisted of sandy fine-grained soils or silty sand. A gravelly sand layer first encountered at depths between 18 and 22 feet bgs extended across most of the Site where borings were advanced to this depth.

3.2 Soil Analytical Results

Laboratory results for soil samples are summarized in Tables 2 through 5, and boring locations are shown on Figures 2 and 3a through 3i.

3.2.1 Soil Screening Levels

Soil analytical results are compared to the following Site-specific action levels (SSALs):

- Arsenic – A Site-specific background arsenic concentration was calculated for the Site using the Arsenic Strategies guidance (DTSC 2009). The SSAL for arsenic was calculated to be 28 mg/kg. The derivation of this background value is described in Section 4.1 and Appendix G.
- Lead - 95% upper confidence limit is at or below 80 mg/kg and analyses indicate that the TTLC results are below 1,000 mg/kg and the STLC (WET) results are below 5 mg/L.
- OCPs, VOC, SVOCs, PCBs, and Title 22 metals excluding lead and arsenic – DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3, DSTC-modified Screening Levels (DTSC 2019), or if the compound is not listed, USEPA Region 9 RSL for residential soil (EPA 2019) for each individual compound detected.
- TPH – LAUSD Environmental Import/Export Materials Testing screening level of 100 mg/kg for gasoline-range hydrobarbons and 1,000 mg/kg for diesel/oil-range hydrocarbons (LAUSD 01 4524 Specification).

3.2.2 Arsenic

Arsenic was reported above the method detection limit (MDL) in 421 samples of 430 samples analyzed at concentrations ranging between 1.297 mg/kg (B97 at 0.5 ft bgs) and 155 mg/kg (B57D at 15.0 feet bgs). The DTSC-adopted background arsenic concentration is 12/kg (DTSC, 2008). A Site-specific background arsenic concentration was calculated for the Site to be 28 mg/kg (Section 4.1 and Appendix G). A total of 22 samples exceeded the Site-specific background value of 28 mg/kg. A summary of soil sample analytical data for arsenic is summarized in Table 2.

3.2.3 Lead

Lead was reported above the MDL in 327 samples of 353 samples analyzed at concentrations ranging between 3.3 mg/kg (B67 sample at 2.5 feet bgs) and 1,030 mg/kg (B12-BBB at 0.5 feet bgs). The DTSC-modified screening level for lead is 80 mg/kg (screening level for use in human health risk assessments) (DTSC 2019). Twenty of the samples analyzed exceeded the DTSC-SL of 80 mg/kg (Table 2).

3.2.4 Other Metals

Cobalt was reported above the MDL in all 99 samples analyzed at concentrations ranging between 2.92 mg/kg (B70A at 0.5 feet bgs) and 31 mg/kg (B53 at 10 feet bgs). The USEPA RSL for cobalt is 23 mg/kg (USEPA 2019). Seven of the samples were equal to or exceeded the USEPA RSL of 23 mg/kg. The four samples with concentrations that exceeded the RSL also contained arsenic concentrations over the Site-specific background concentration. Soil metals results are presented in Table 2.

Thallium was reported above the MDL in 16 samples. All detections were reported as estimated concentrations, as they were detected between the MDL and and reporting limit. All estimated concentrations were above the USEPA RSL of 0.78 mg/kg for thallium.

3.2.5 PCBs

A total of 35 soil samples, approximately 10% of all soil samples, were selected for PCB analysis. No PCBs were detected above their respective MDLs in soil samples analyzed. Analytical results are shown in Table 3.

3.2.6 OCPs

OCPs were detected above their respective MDLs in thirty-five (35) of the samples analyzed for OCPs. OCPs detected include: 4,4'-Dichlorodiphenyldichloroethane (4,4'-DDD), 4,4-Dichlorodiphenyldichloroethylene (4,4'-DDE), 4,4'-Dichlorodiphenyltrichloroethane (4,4'-DDT), gamma-hexachlorocyclohexane (g-BHC or "Lindane"), chlordane, Dieldrin and Heptachlor epoxide. All concentrations were below the USEPA RSLs for the individual compounds. Analytical results are shown in Table 3.

3.2.7 TPH

Samples from select borings were analyzed for TPH quantified as gasoline, diesel, and oil as summarized in Table 4. TPH-gasoline was not detected in any of the samples analyzed. Low level detections of TPH-diesel and TPH-motor oil in samples included:

- TPH-diesel was only detected in boring B99 at 0.5 feet bgs at a concentration of 11 mg/kg. The detection was below the LAUSD Environmental Import/Export Materials Testing (LAUSD 01 4524 Specification) screening level of 1,000 mg/kg for diesel and is considered relatively low.
- TPH-motor oil was detected in four samples at concentrations ranging from 14 mg/kg (B53 at 5.0 feet bgs) to 64 mg/kg (B46 at 0.5 feet bgs). The detection was below the LAUSD Environmental Import/Export Materials Testing (LAUSD 01 4524 Specification) screening level of 1,000 mg/kg for oil and is considered relatively low.

3.2.8 VOCs

Samples from select borings across the Site and near the photography classroom were analyzed for VOCs in consultation with OEHS, as summarized in Table 4. Low levels of fourteen VOCs were detected in one or more of the samples analyzed; however, all detections of VOCs were below their respective SSALs, as summarized in Table 4. Low level detections of VOCs included:

- 1,2,4-trimethylbenzene was detected in three samples at concentrations ranging from 0.00025 mg/kg (B85 at 1.5 feet bgs) to 0.00054 mg/kg (B86 at 0.5 feet bgs).
- Acetone was detected in ten samples at concentrations ranging from 0.051 mg/kg (B85 at 2.5 feet bgs) to 0.28 mg/kg (B85 at 0.5 feet bgs). These detections are well below the USEPA RSL of 61,000 mg/kg.
- Benzene was detected in 31 samples at concentrations ranging from 0.00015 J mg/kg (SV117 at 25 feet bgs) to 0.0016 mg/kg (B85 at 0.5 feet bgs). These detections are below the DTSC SL of 0.33 mg/kg.
- n-propylbenzene was only detected in B62 at 10 feet bgs at a concentration of 0.0054 mg/kg. This result is below the USEPA RSL of 3,800 mg/kg.
- p-isopropyltoluene was only detected in B62 at 10 feet bgs at a concentration of 0.0045 mg/kg. No RSLs currently exist for this constituent.
- Toluene was detected in 29 samples at concentrations ranging from 0.00013 J mg/kg in SV117 at 15 ft bgs to 0.009 mg/kg (SV62 at 10 ft bgs. These results are below the DTSC SL of 1,100 mg/kg.
- Total xylenes were detected in 7 samples at concentrations ranging from 0.0084 mg/kg in B85 at 2.5 ft bgs to 0.00226 mg/kg in B85 at 0.5 ft bgs.
- Remaining VOCs analyzed were not detected at or above their respective MDLs.

3.2.9 SVOCs

SVOCs were not detected at or above their respective MDLs in any of the six samples analyzed. A summary of MDLs can be found in Table 5.

3.2.10 PAHs

PAHs were not detected at or above the MDL in the six samples analyzed from select borings (Table 5).

3.2.11 Dioxin/Furans

Dioxin/furans were analyzed in three soil samples. All detections were below the instrument calibration range.

3.2.12 Leaching Analyses

Select soil samples with metals concentrations over 50 mg/kg were extracted using the STLC (WET) test procedure or the TCLP, and the leachate was analyzed for lead or arsenic using USEPA Method 6010B. Analytical results, including both the primary soil results and the corresponding results from the STLC and TCLP prep methods, are listed in Table 6.

Arsenic: Two samples (B11-DDD-1.5 and B18-2.5) were extracted using the STLC (WET) test procedure and the leachate was analyzed for arsenic using USEPA Method 6010B. One of these samples (B11-DDD-1.5) was also extracted using the TCLP and the leachate was also analyzed for arsenic. All results were less than 5 mg/L, both the TCLP and STLC regulatory limit for arsenic.

Lead: Six samples were extracted using the STLC (WET) test procedure and the leachate was analyzed for lead using USEPA Method 6010B. Resulting STLC-lead results were between less than the reporting limit of 0.1 mg/L (B91 at 1.5 feet bgs) to 83 mg/L (B12-BBB at 0.5 feet bgs). Only samples B12-0.5 and B-12-BBB-0.5 exceeded the 5 mg/L threshold. As a result, B12-BBB at 0.5 feet bgs was extracted using the TCLP, and the leachate was analyzed for lead using USEPA Method 6010B. The concentration for TCLP-lead in sample B12-BBB-0.5 was 5.09 mg/L. This concentration is above the TCLP regulatory limit of 5 mg/L for lead and is therefore representative of hazardous material under federal waste disposal regulations.

3.3 Soil Vapor Analytical Results

A total of 91 soil vapor samples were analyzed for VOCs at the Site. Soil vapor results were compared to the DTSC-SL or USEPA RSL for resident air, modified by an attenuation factor of 0.002. Six of the VOCs exceeded their respective DTSC-SL or USEPA RSL including 1,2-dichloroethane, 1,3-butadiene, benzene, ethylbenzene, naphthalene, and tetrachloroethene. Soil vapor analytical results are presented in Table 7.

- 1,2-dichloroethane was only detected in sample SV62 at 15 feet bgs at a concentration of 76 micrograms per cubic meter ($\mu g/m^3$). The concentration exceeded the SSAL of 55 $\mu g/m^3$.

- 1,3-butadiene was only detected in sample SV60 at 15 feet bgs at a concentration of 16.9 µg/m^3. The concentration exceeded the SSAL of 8.5 µg/m^3.
- Benzene was detected in 42 samples at concentrations ranging from 1.8 µg/m^3 in SV-114 at 15 ft bgs to 1,080 µg/m^3 in SV55 at 15 ft bgs. Eleven of the detected concentrations exceeded the SSAL of 48.5 µg/m^3. Isoconcentrations of the benzene soil vapor concentrations are shown on Figure 4a (samples collected from 5 feet bgs) and 4b (samples collected deeper than 5 feet bgs).
- Ethylbenzene was detected in 35 samples at concentrations ranging from 2.3 µg/m^3 in B64 at 29 ft bgs to 1,300 µg/m^3 in SV115 at 15 and 25 ft bgs. Four detections exceeded the SSAL of 550 µg/m^3. Isoconcentrations of the ethylebenzene soil vapor concentrations are shown on Figure 5a (samples collected from 5 feet bgs) and 5b (samples collected deeper than 5 feet bgs).
- Naphthalene was detected 6 samples at concentrations ranging from 4.1 µg/m^3 in B64 at 29 ft bgs to 68 µg/m^3 in SV56 at 15 ft bgs. Only one concentration exceeded the SSAL of 41.5 µg/m^3.
- Tetrachloroethene was detected 39 samples at concentrations ranging from 2.4 µg/m^3 in SV116 at 15 ft bgs to 343 µg/m^3 in B4 at 5 ft bgs. Only one concentration exceeded the SSAL of 230 µg/m^3.

4.0 HUMAN HEALTH SCREENING EVALUATION

As part of this PEA-E study, select soil and soil vapor samples were analyzed for arsenic, lead, remaining Title 22 metals, PCBs, OCPs, TPH, VOCs, PAHs, and/or SVOCs, which were the COPCs identified in soil at the Site. Relevant SSALs applicable to the analyses in this PEA-E (OEHS 2018) include:

- Arsenic – a Site-specific background concentration of 28 mg/kg was developed for the Site, as discussed in Section 4.1.
- Lead - 95% upper confidence limit is at or below 80 mg/kg.
- OCPs, VOC, SVOCs, PCBs, and Title 22 metals other than arsenic and lead – DTSC HERO HHRA Note 3, DSTC-modified Screening Levels (DTSC 2019), or if the compound is not listed, USEPA Region 9 RSL for residential soil (USEPA 2019) for each individual compound detected.
- TPH – LAUSD Environmental Import/Export Materials Testing screening level of 100 mg/kg for gasoline and 1,000 mg/kg for diesel/oil (LAUSD 01 4524 Specification).

4.1 Arsenic Concentration Evaluation

Terraphase reviewed the arsenic soil sampling results with consideration for the methodologies presented in CalEPA DTSC's January 2009 Arsenic Strategies Determination of Arsenic Remediation, Development of Arsenic Cleanup Goals (DTSC 2009). Using the guidance, Terraphase calculated an arsenic concentration of 28 mg/kg to be used as a cleanup goal. The following is a brief overview of the analysis performed and the associated results which support this proposed cleanup goal for arsenic. This included performing both a simple graphical determination as well as a statistical determination. The graphical determination resulted in an estimated cleanup goal for arsenic of 25 mg/kg. The statistical determination resulted in an estimated cleanup goal for arsenic of 28 mg/kg. Since both methodologies are supported by the guidance, Terraphase recommended the use of the higher of these two results, 28 mg/kg. LAUSD verbally accepted using 28 mg/kg as the Site-specific background concentration in March 2019.

Further details on how the arsenic background concentration was calculated are included in Appendix G.

4.2 Health Risk Screening Evaluation

Concentrations of various metals above SSALs were reported in Site soils, and concentrations of various VOCs above SSALs were reported in Site soil vapor; therefore, a Human Health Screening Risk Evaluation (HHSRE) was performed and is included as Appendix H. The HHSRE was performed in accordance with the DTSC PEA Guidance Manual (DTSC 2015a).

4.2.1 Soil

Concentrations of arsenic, lead, and cobalt above SSALs were reported in Site soils. All Site soil data was considered in the HHSRE unless noted below. The following assumptions were made in the risk evaluation:

- Locations with arsenic or lead concentrations exceeding the SSALs would be subject to remedial action. In conducting the quantitative risk calculations, these locations were assumed to be remediated (e.g., soil excavated and replaced with clean soil).
- The USEPA RSL for thallium was not used since it is based upon a Provisional Peer-Reviewed Toxicity Value (PPRTV) Appendix (Screening Value) toxicity value. USEPA states that these toxicity values are "*not defensible as the primary drivers in making cleanup decisions because they are based on limited information*" (USEPA 2009, 2012).
- Total chromium concentrations were assumed to be trivalent chromium (Cr III) and not hexavalent chromium (Cr VI), given the lack of a suspected source that could have released Cr VI to the subsurface at the Site.

Upper-bound estimates of single-chemical cancer risk and noncancer hazard quotients (HQ) were calculated and then summed for each location to estimate the upper-bound cumulative cancer risk and noncancer hazard index (HI) at each location.

Assuming soil impacted with soil or arsenic above SSALs is removed, none of the remaining soil at the Site would exhibit concentrations that would result in cumulative risk or HI estimates greater than the risk management goals used by DTSC to determine when risk management action is warranted (DTSC 2015a).

4.2.2 Soil Vapor

Eight soil vapor locations exhibited cumulative cancer risk estimates above the risk management goal of $1x10^{-6}$. Noncancer HI estimates at all soil vapor sampling locations were less than or equal to the risk management goal of 1. The eight locations (B04, B55, B56, B62, B110, B115, B117, and B121) are highlighted on Figure 4 of Appendix H, and are generally located near the Photo Studio and the sewer line leading from the Photo Studio. Other locations are in parking lots, open areas, or adjacent to the Laboratory Classrooms building. Further consideration for vapor intrusion risk management action at these locations is warranted as Site redevelopment plans are finalized. These considerations may include (1) additional sampling and/or further assessment to refine the conservative quantitative risk estimates presented in this evaluation, or (2) remedial action to reduce COPC concentrations in these areas or to eliminate/mitigate vapor intrusion exposure to receptors.

5.0 COMMUNITY PROFILE

Community profile information for the 90034 zip code and participation are described briefly, below.

5.1 Community Demographics

According to the 2018 American Community Survey (data.census.gov), the Demographic Profile for 90034 is:

- Total population: 55,652
- Median Age: 33.7
- Population 18 years and over: 86.7%
- Male: 27,996 (50.3%)
- Female: 27,656 (49.7%)
- Population by race:
    - White: 31,319 (56.3%)
    - Black or African American: 5,565 (10.0%)
    - American Indian and Alaska Native: 161 (0.3%)
    - Asian: 10,929 (19.6%)
    - Native Hawaiian and Pacific Islander: 121 (0.2%)
    - Other: 142 (1.2%)
    - Two or More Races: 2,789 (5.0%)
- Total Households: 27,712
- Average Household Size: 2.00

5.2 Local Participation and Involvement

On August 24, 2018, Terraphase distributed assessment work notices to line of sight neighbors and to the School's administrative counter to provide the community members with information regarding the PEA-E activities. Terraphase also laminated and posted the assessment work notice on the fence at each of the four sides of the Site, and mailed the assessment work notices to the student mailing list provided by LAUSD. English and Spanish translations of the assessment work notice were provided. Field sampling activities for the PEA-E study were conducted during the school holidays or weekends to

minimize disturbance to school activities. Terraphase is not aware of media coverage, specific environmental concerns or issues identified by the community, or off-Site issues in relation to the Site.

This Draft PEA report will undergo a 30 day public review including a public meeting where LAUSD will be available for any questions. The Draft PEA-E Report can be reviewed at the following locations:

- Hamilton High School website: https://hamiltonhs-lausd-ca.schoolloop.com/
- LAUSD OEHS website: http://achieve.lausd.net/CEQA and http://achieve.lausd.net/SiteAssessment
- CEQAnet: https://ceqanet.opr.ca.gov/ (PEA-E as an appendix)

The 30 day public review will start October 15 and end 30 days later. The public meeting is scheduled for October 28, 2020. Any public comments and/or questions will be incorporated in the final PEA report.

6.0 CONCLUSIONS AND RECOMMENDATIONS

The Site is located at Alexander Hamilton High School located at 2959 South Robertson Boulevard in Los Angeles, California (Figures 1 and 2). The primary objectives of this PEA-E were to collect samples of soil at the Site for analysis of COPCs, including arsenic, lead, other Title 22 metals, PCBs, OCPs, TPH, VOCs, SVOCs, PAHs, and/or dioxin/furans in general accordance with typical DTSC guidance for school sites; to screen soil vapor at the Site for COPCs, including VOCs and oxygenates; and to evaluate the Site health risk based on soil and soil vapor results for COPCs.

Shallow soil and soil vapor sample results from the PEA-E survey indicate that select COPCs, including arsenic and lead in soil and benzene and ethylbenzene in soil vapor, are present at concentrations above the SSALs typical of school sites in California. The PEA-E survey results in the vicinity of the Humanities Classrooms, the Photo Studio, the west side of the Laboratory Classrooms, the north side of the Girls' Gym, the west side of portable building (B1, B2), and the north central portion of the Site indicate that elevated levels of arsenic and lead were reported in shallow soil samples analyzed. Conservative estimates of cumulative cancer risk estimates due to vapor intrusion exposure at eight locations were greater than DTSC's recommended risk management goals, and additional assessment and/or remedial action at these locations would is warranted.

Based on these results, Terraphase recommends that a Removal Action Workplan (RAW) be prepared for the target COPCs in shallow soil and soil vapor in the locations referenced above. Large scale figures showing the soil sample locations and recommended excavation boundaries are includes as Figures 6a to 6i. Assuming removal of the arsenic and lead concentrations in soil above SSALs, conservative estimates of cumulative cancer risk and noncancer HI due to direct contact exposure to remaining COPCs in soil would be equal to or below DTSC's risk management goals. As such, additional risk management action to address potential direct contact exposures to soil at the Site would not be warranted. Potential removal or mitigation measures to address cancer risks related to vapor intrusion in Site buildings should also be presented and evaluated in the RAW.

7.0 LIMITATIONS

The opinions and recommendations presented in this report are based upon the scope of services, information obtained through the performance of the services. This report was prepared in accordance with the generally accepted standards and level of skill and care under similar conditions and circumstances established by the environmental consulting industry as practiced in California. To the extent that Terraphase relied upon any information prepared by other parties not under contract to Terraphase, no representation as to the accuracy or completeness of such information is made.

The findings presented in this report apply solely to conditions existing at the time of the assessment. It must be recognized that results intended for the purpose of screening or evaluating the Site for potential contamination through limited research and investigative activities may not represent a conclusive or complete characterization.

Terraphase's interpretation of investigation results is related to the availability of the data and the extent of the investigation activities, and Terraphase does not provide any guarantees, certifications, or warranties (express or implied) of conditions in areas not evaluated. Furthermore, nothing contained in this document shall relieve any party of its responsibility to abide by contract documents and all applicable laws, codes, regulations, or standards.

Legend

- Step-Out Shallow Soil Boring
- Background Arsenic Soil Boring
- Shallow Boring (<2.5 Feet)
- Soil/Soil Vapor Boring
- Soil Vapor Only Boring
- Site Boundary
- Building Footprint
- Planting Area
- Isoconcentration Contour (Dashed Where Inferred)

Notes:
-All results presented in micrograms per cubic meter (µg/m³)
-ft-bgs = feet below ground surface
- < = Result is less than laboratory reporting limit, J = Estimated Value, D = RPD was not within control limits.
-Detected concentrations of benzene are shown in **BOLD**
-Ethylbenzene concentrations exceeding the soil vapor screening level of 550 µg/m³ calculated from the USEPA Residential RSL (May 2020) are shown in RED
-Ethylbenzene analysis was accomplished at a mobile laboratory and at a stationary laboratory via methods 8260B and TO-15, respectively, for samples SV01 (15 ft-bgs), SV04B (5 ft-bgs), SV62 (5 ft-bgs), SV63 (29 ft-bgs), SV65 (15 ft-bgs), SV110 (15.5 ft-bgs), SV116 (15 ft-bgs), SV118 (5 ft-bgs, 25 ft-bgs), and SV122 (5 ft-bgs). Results are displayed as 8260B / TO-15.
-Duplicate analysis was performed at the mobile laboratory for sample SV-59 (15 ft-bgs).
-Field duplicates were collected at SV04D (15 ft-bgs), SV53 (5 ft-bgs), SV60 (15 ft-bgs), SV63 (29 ft-bgs), and SV111 (5 ft-bgs).
-Results for SV63 (29 ft-bgs) are displayed as 8260B / TO-15 / Duplicate Result.
-RSL = Regional Screening Level

Notes
* Primary samples analyzed for all Title 22 Metals. Step-out samples only analyzed for chemicals above screening levels.
OCPs = organochlorine pesticides
PCBs = polychlorinated biphenyls
PAHs = polyaromatic hydrocarbons
SIM = selective ion monitoring
TPH = total petroluem hydrocarbons
SVOCs = semivolatile organic compounds
VOCs = volatile organic compounds
EPA = United States Environmental Protection Agency

Notes
mg/kg = milligrams per kilogram
- = not analyzed
< = not reported above analytical reporting limit shown
J - estimated value
B1 =Analyte was present in a sample and the associated method blank greater than MDL but less than the RDL
ft bgs = feet below ground surface
HHRA- Human Health Risk Assessment
DTSC - Department of Toxic Substance Control
USEPA- Usited State Environmental Protection Agency

Notes

µg/m3 = micrograms per meter cubed

< = less than analytical reporting limit shown

J = estimated value

Notes

µg/m3 = micrograms per meter cubed

< = less than analytical reporting limit shown

J = estimated value

Notes

µg/m3 = micrograms per meter cubed

< = less than analytical reporting limit shown

J = estimated value

Notes

µg/m3 = micrograms per meter cubed

< = less than analytical reporting limit shown

J = estimated value

Notes
µg/m3 = micrograms per meter cubed
< = less than analytical reporting limit shown
J = estimated value

APPENDIX A
BORING LOGS

Project: **Alexander Hamilton Senior High School**
Project Location: **2955 S. Robertson Blvd., Los Angeles, CA**
Project Number: **S030.008.004**

Key to Log of Boring

Sheet 1 of 1

Depth (feet)	Sample Number	USCS Symbol	Graphic Log	MATERIAL DESCRIPTION	REMARKS AND OTHER TESTS
1	2	3	4	5	6

COLUMN DESCRIPTIONS

1 Depth (feet): Depth in feet below the ground surface.
2 Sample Number: Sample identification number.
3 USCS Symbol: Type of material encountered.
4 Graphic Log: Graphic depiction of the subsurface material encountered.
5 MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
6 REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.

FIELD AND LABORATORY TEST ABBREVIATIONS

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent
PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

Asphaltic Concrete (AC)
Fat CLAY, CLAY w/SAND, SANDY CLAY (CH)
Lean CLAY, CLAY w/SAND, SANDY CLAY (CL)
Portland Cement Concrete
AF
Poorly graded GRAVEL (GP)
Poorly graded GRAVEL with Silt (GP-GM)
Limestone
SILT, SILT w/SAND, SANDY SILT (ML)
Clayey SAND (SC)
Silt
Silty SAND (SM)
Poorly graded SAND (SP)
Poorly graded SAND with Silt (SP-SM)

TYPICAL SAMPLER GRAPHIC SYMBOLS

Auger sampler
Bulk Sample
3-inch-OD California w/ brass rings
CME Sampler
Grab Sample
2.5-inch-OD Modified California w/ brass liners
Pitcher Sample
2-inch-OD unlined split spoon (SPT)
Shelby Tube (Thin-walled, fixed head)

OTHER GRAPHIC SYMBOLS

Water level (at time of drilling, ATD)
Water level (after waiting)
Minor change in material properties within a stratum
Inferred/gradational contact between strata
Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

Project: **Alexander Hamilton Senior High School** Project Location: **2955 S. Robertson Blvd., Los Angeles, CA** Project Number: **S030.008.004**	Log of Boring B62/SV62 **Sheet 1 of 2**

Date(s) Drilled	**11/19/2018**	Logged By	**Tanner Rickard**	Checked By	**Clare Steedman, PG**
Drilling Method	**Hand auger, direct push**	Drill Bit Size/Type	**2.25 inch hand auger, 2.25 inch direct push**	Total Depth of Borehole	**16.0 feet bgs**
Drill Rig Type	**Geoprobe 5400**	Drilling Contractor	**Strongarm Environmental Field Services**	Approximate Surface Elevation	**~125 feet amsl**
Groundwater Level and Date Measured	**Not Encountered**	Sampling Method(s)	**Hand auger, acetate liner**	Hammer Data	**Not Applicable**
Borehole Backfill	**Soil vapor probe, patched to match existing ground surface**	Location			

Depth (feet)	Sample Number	USCS Symbol	Graphic Log	MATERIAL DESCRIPTION	REMARKS AND OTHER TESTS
0		Asphalt		Approximately 2" of asphalt and 4" of base underneath	
		ML		CLAYEY SILT (ML), very dark greyish brown (10YR 3/2), damp, very stiff, no plasticity, approximately 30% clay, trace fine sand and small gravel, some roots, no odor	
				↓ Decreasing clay content and increasing gravel and sand	
5					
		SP-SM		SILTY GRAVELLY SAND (SP-SM), brown (10YR 4/3), dry to damp, fine sand and subangular gravel up to 3/8" in diameter, poorly graded, approximately 10 to 20% silt and 20% gravel, gravel composed of slate and granodiorite, no odor	
				↓ Decreasing gravel content	
10

Key to Log of Boring

Sheet 1 of 1

Depth (feet)	Recovered (in) / Total (in)	USCS Symbol	Graphic Log	MATERIAL DESCRIPTION	REMARKS AND OTHER TESTS	Soil Vapor Probes Construction Log
1	2	3	4	5	6	7

COLUMN DESCRIPTIONS

1. Depth (feet): Depth in feet below the ground surface.
2. Recovered (in) / Total (in): Inches of recovery / total inches of boring tubing.
3. USCS Symbol: Type of material encountered.
4. Graphic Log: Graphic depiction of the subsurface material encountered.
5. MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
6. REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.
7. Soil Vapor Probes Construction Log: Graphical representation of well installed upon completion of drilling and sampling.

FIELD AND LABORATORY TEST ABBREVIATIONS

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent
PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

- Asphaltic Concrete (AC)
- Bentonite chips
- Lean CLAY, CLAY w/SAND, SANDY CLAY (CL)
- Portland Cement Concrete
- AF
- Silty GRAVEL (GM)
- SILT, SILT w/SAND, SANDY SILT (ML)
- Clayey SAND (SC)
- Silty SAND (SM)
- Silty SAND to Sandy SILT (SM-ML)
- Poorly graded SAND (SP)
- Well graded SAND (SW)

TYPICAL SAMPLER GRAPHIC SYMBOLS

- Auger sampler
- Bulk Sample
- 3-inch-OD California w/ brass rings
- CME Sampler
- Grab Sample
- 2.5-inch-OD Modified California w/ brass liners
- Pitcher Sample
- 2-inch-OD unlined split spoon (SPT)
- Shelby Tube (Thin-walled, fixed head)

OTHER GRAPHIC SYMBOLS

- Water level (at time of drilling, ATD)
- Water level (after waiting)
- Minor change in material properties within a stratum
- Inferred/gradational contact between strata
- Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

Sheet 1 of 1

Elevation (feet)	Depth (feet)	Sample Type	Sample Number	Sampling Resistance, blows/ft	Material Type	Graphic Log	MATERIAL DESCRIPTION	REMARKS AND OTHER TESTS
1	2	3	4	5	6	7	8	9

COLUMN DESCRIPTIONS

1 Elevation (feet): Elevation (MSL, feet).
2 Depth (feet): Depth in feet below the ground surface.
3 Sample Type: Type of soil sample collected at the depth interval shown.
4 Sample Number: Sample identification number.
5 Sampling Resistance, blows/ft: Number of blows to advance driven sampler one foot (or distance shown) beyond seating interval using the hammer identified on the boring log.
6 Material Type: Type of material encountered.
7 Graphic Log: Graphic depiction of the subsurface material encountered.
8 MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
9 REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.

Key to Log of Boring

Sheet 1 of 1

Depth (feet)	Recovered (in) / Total (in)	Sample Number	USCS Symbol	Graphic Log	MATERIAL DESCRIPTION	REMARKS AND OTHER TESTS	Soil Vapor Probes Construction Log
1	2	3	4	5	6	7	8

COLUMN DESCRIPTIONS

1 Depth (feet): Depth in feet below the ground surface.
2 Recovered (in) / Total (in): Inches of recovery / total inches of boring tubing.
3 Sample Number: Sample identification number.
4 USCS Symbol: Type of material encountered.
5 Graphic Log: Graphic depiction of the subsurface material encountered.
6 MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
7 REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.
8 Soil Vapor Probes Construction Log: Graphical representation of well installed upon completion of drilling and sampling.

FIELD AND LABORATORY TEST ABBREVIATIONS

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent
PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

Asphaltic Concrete (AC)
Bentonite chips
SILT, SILT w/SAND, SANDY SILT (ML)
Silty SAND (SM)
Poorly graded SAND (SP)

TYPICAL SAMPLER GRAPHIC SYMBOLS

Auger sampler
Bulk Sample
3-inch-OD California w/ brass rings
CME Sampler
Grab Sample
2.5-inch-OD Modified California w/ brass liners
Pitcher Sample
2-inch-OD unlined split spoon (SPT)
Shelby Tube (Thin-walled, fixed head)

OTHER GRAPHIC SYMBOLS

Water level (at time of drilling, ATD)
Water level (after waiting)
Minor change in material properties within a stratum
Inferred/gradational contact between strata
Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

COLUMN DESCRIPTIONS

1 Depth (feet): Depth in feet below the ground surface.
2 Sample Type: Type of soil sample collected at the depth interval shown.
3 Sample Number: Sample identification number.
4 Recovered (in) / Total (in): Inches of recovery / total inches of boring tubing.
5 USCS Symbol: Type of material encountered.
6 Graphic Log: Graphic depiction of the subsurface material encountered.
7 MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
8 REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.

FIELD AND LABORATORY TEST ABBREVIATIONS

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent
PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

Lean CLAY, CLAY w/SAND, SANDY CLAY (CL)
Clayey SAND (SC)
Poorly graded SAND (SP)
Well graded SAND (SW)

TYPICAL SAMPLER GRAPHIC SYMBOLS

Auger sampler
CME Sampler
Pitcher Sample
Bulk Sample
Grab Sample
2-inch-OD unlined split spoon (SPT)
3-inch-OD California w/ brass rings
2.5-inch-OD Modified California w/ brass liners
Shelby Tube (Thin-walled, fixed head)

OTHER GRAPHIC SYMBOLS

Water level (at time of drilling, ATD)
Water level (after waiting)
Minor change in material properties within a stratum
Inferred/gradational contact between strata
Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

Asphaltic Concrete (AC)
Silty SAND (SM)
Poorly graded SAND (SP)
Poorly graded SAND with Silt (SP-SM)

TYPICAL SAMPLER GRAPHIC SYMBOLS

Auger sampler
CME Sampler
Pitcher Sample
Bulk Sample
Grab Sample
2-inch-OD unlined split spoon (SPT)
3-inch-OD California w/ brass rings
2.5-inch-OD Modified California w/ brass liners
Shelby Tube (Thin-walled, fixed head)

OTHER GRAPHIC SYMBOLS

Water level (at time of drilling, ATD)
Water level (after waiting)
Minor change in material properties within a stratum
Inferred/gradational contact between strata
Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

R:\Projects\S030 - Los Angeles Unified School District\008 - Alexander Hamilton Senior HS\Technical\Boring Logs\Hamilton AB.bg4[Hamilton HS.tpl]

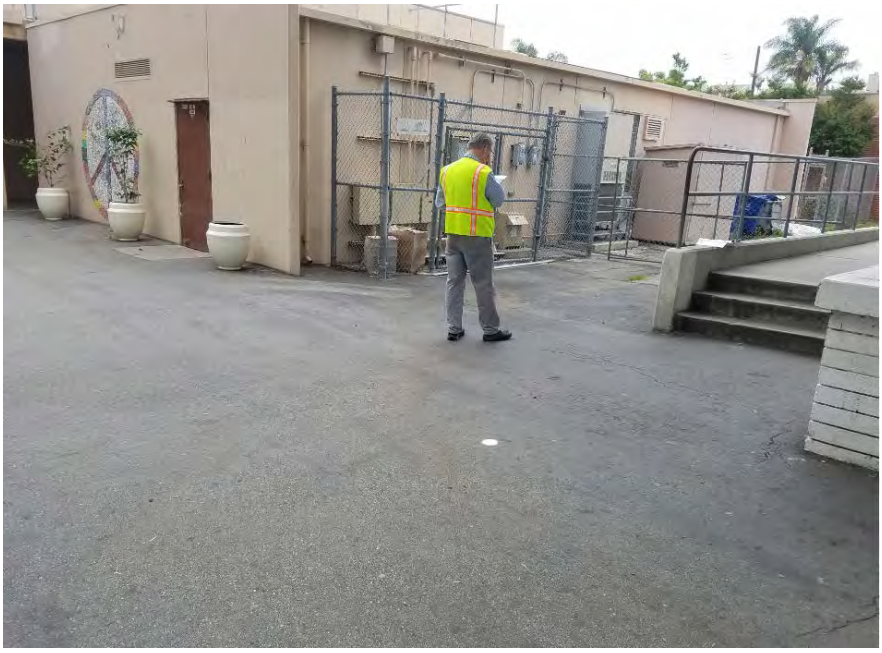
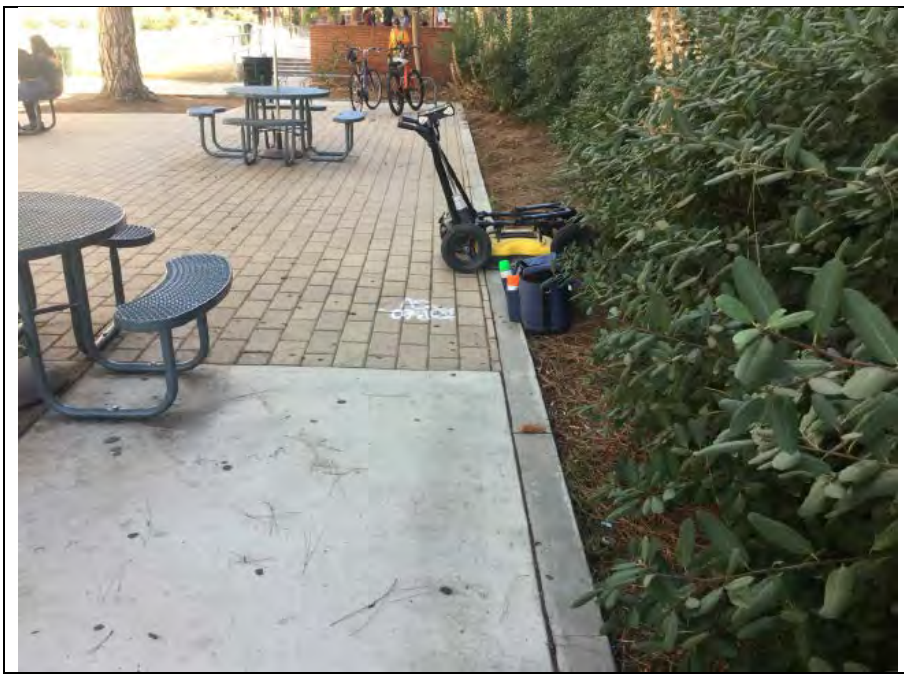
APPENDIX B
PHOTOGRAPH LOG



Photograph 1:

The photograph shows the marking of boring locations prior to drilling activities. View to the southeast.



Photograph 2:

The photographs shows geophysical utility clearance prior to drilling activities. View to the south.

SAFETY FIRST	CLIENT: Los Angeles Unified School District	**PHOTO LOG**
terraphase engineering	PROJECT: Alexander Hamilton High School 2955 S Robertson Blvd, Los Angeles, CA	
	PROJECT NUMBER: S030.008.004	**PAGE 1**

Photograph 3:

The photograph shows an example of coring activities prior to drilling. View to the north.

Photograph 4:

The photograph shows typical drilling activities to facilitate soil sampling and soil vapor probe installation via the direct push method. View to the south.

Photograph 5:

The photograph shows soil recovered in acetate liners from direct-push drilling. Sample then collected in laboratory provided jars for analysis.

Photograph 6:

The photograph shows the final surface completion of stepout borings around B57. View to the northeast.

SAFETY FIRST	CLIENT: Los Angeles Unified School District	**PHOTO LOG**
terraphase engineering	PROJECT: Alexander Hamilton High School 2955 S Robertson Blvd, Los Angeles, CA	
	PROJECT NUMBER: S030.008.004	**PAGE 3**

Photograph 7:

The photograph shows an example of temporary, dual-nested soil vapor probes.

Photograph 8:

The photograph shows the storage location of 55-gallon drums containing investigation-derived waste. View to the east.

	Photograph 8: The photograph shows the sampling of soil vapor using liquid leak check compound.

Notes and Definitions

QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QM-07	The spike recovery and or RPD was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

DETECTIONS SUMMARY

Sample ID: B57- 5.0 **Laboratory ID:** T182803-01

Analyte	Result	Reporting Limit	Units	Method	Notes
Arsenic	**25**	5.0	mg/kg	EPA 6010b	
Barium	**150**	1.0	mg/kg	EPA 6010b	
Chromium	**45**	2.0	mg/kg	EPA 6010b	
Cobalt	**23**	2.0	mg/kg	EPA 6010b	
Copper	**38**	1.0	mg/kg	EPA 6010b	
Lead	**15**	3.0	mg/kg	EPA 6010b	
Nickel	**35**	2.0	mg/kg	EPA 6010b	
Vanadium	**77**	5.0	mg/kg	EPA 6010b	
Zinc	**90**	1.0	mg/kg	EPA 6010b	

Sample ID: B57- 10.0 **Laboratory ID:** T182803-02

Analyte	Result	Reporting Limit	Units	Method	Notes
Arsenic	**37**	5.0	mg/kg	EPA 6010b	
Barium	**210**	1.0	mg/kg	EPA 6010b	
Chromium	**69**	2.0	mg/kg	EPA 6010b	
Cobalt	**30**	2.0	mg/kg	EPA 6010b	
Copper	**60**	1.0	mg/kg	EPA 6010b	
Lead	**21**	3.0	mg/kg	EPA 6010b	
Nickel	**55**	2.0	mg/kg	EPA 6010b	
Vanadium	**130**	5.0	mg/kg	EPA 6010b	
Zinc	**130**	1.0	mg/kg	EPA 6010b	

Sample ID: B57- 15.0 **Laboratory ID:** T182803-03

Analyte	Result	Reporting Limit	Units	Method	Notes
Arsenic	**29**	5.0	mg/kg	EPA 6010b	
Barium	**150**	1.0	mg/kg	EPA 6010b	
Chromium	**48**	2.0	mg/kg	EPA 6010b	
Cobalt	**24**	2.0	mg/kg	EPA 6010b	
Copper	**38**	1.0	mg/kg	EPA 6010b

Notes and Definitions

S-GC	Surrogate recovery outside of established control limits. The data was accepted based on valid recovery of the remaining surrogate(s).
S-03	The surrogate recovery was below acceptance criteria in the sample because of a possible matrix effect. The surrogate recovery was within acceptance criteria in the method blank and LCS.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
QM-07	The spike recovery and or RPD was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Subject: Additional Request: LAUSD Hamilton STLC Analyses; Lab Reports T182803, T183211, T183212, and T182898
Attachments: T182803_WKO_02.pdf; T182898_WKO_02.pdf; T183211_WKO_02.pdf; T183212_WKO_03.pdf

Clare,

Please find attached revised work orders reflecting the additional STLC testing. Details are documented in the comments section (right hand side). We will have the additional STLC results for you before end of day Wednesday 11/28 as a standard 5-day TAT.

Let us know if you need anything else!

Happy Thanksgiving ☺

Rose Fasheh
Project Manager

SunStar Laboratories

25712 Commercentre Dr., Lake Forest, CA 92630
Office: (949) 297-5020 | Fax: (949) 297-5027
CA ELAP Certification: 2250 | CA Small Business Certification: 31511

Confidentiality Notice: This email and any attachment(s) are for the sole use of the intended recipient(s) to whom it is addressed and may contain information that is privileged and/or confidential. Any authorized reproduction of this message or attachment(s) must be in its entirety. If you have received this message in error, please promptly notify the sender by email and delete this message from your system.

Shipping Alert:
Please note that SunStar Laboratories will be observing the Thanksgiving Holidays on Thursday and Friday, November 22nd and 23rd. In addition, GSO will not have scheduled service on Thursday, November 22nd. If you have any short hold samples arriving near or during these days, please contact your Project Manager in advance to ensure all holding times are met for your samples. SunStar will be available on Saturday, November 24th if needed to receive samples. Please let your Project Manager know if you will ship or deliver samples on this day.

We appreciate your business and hope that you have a wonderful and safe holiday!

Hi Rose,

Thanks for the heads up. Standard turn is fine.

Good morning Clare,

Kris no longer works with SunStar, but I will go ahead and get those going for you. Is a standard 5-day TAT okay, or did you need the results expedited?

Thank you,

Rose Fasheh

Notes and Definitions

QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

FAL Project ID: 11895

Mr. Kris Kubota
SunStar Laboratories, Inc.
25712 Commercentre Drive
Lake Forest, CA 92630

Dear Mr. Kubota,

The following results are associated with Frontier Analytical Laboratory project **11895**. This corresponds to your subcontract order **T182898**. Three soil samples and one aqueous sample were received at Frontier Analytical Laboratory on 9/21/2018. These samples were extracted and analyzed by EPA Method 8290 for tetra through octa chlorinated dibenzo dioxins and furans. The 2005 World Health Organizations (WHO) toxic equivalency factors (TEFs) were used to calculate the toxic equivalents (TEQs) on your report. SunStar Laboratories, Inc. requested a turnaround time of fifteen days for project **11895**.

The following report consists of an Analytical Data section and a Sample Receipt section. The Analytical Data section contains our sample tracking log and the analytical results. The Sample Receipt section contains your chain of custody, our sample login form and a sample photo. The attached results are specifically for the samples referenced in this report only. These results meet all National Environmental Laboratory Accreditation Program (NELAP) requirements and shall not be reproduced except in full. Frontier Analytical Laboratory's State of Oregon NELAP certificate number is **4041**. Our State of California ELAP certificate number is **2934**. This report has been emailed to you as a portable document format (PDF) file. A hardcopy will not be sent to you unless specifically requested.

If you have any questions regarding project **11895** please feel free to contact me at (916) 934-0900. Thank you for choosing Frontier Analytical Laboratory for your analytical testing needs.

Sincerely,

Bradley B. Silverbush
Director of Operations

Frontier Analytical Laboratory

SAMPLE RECEIVING REVIEW SHEET

Batch/Work Order #: T182898

Client Name: TERRAPHASE

Project: HAMILTON HIGHSCHOOL

Delivered by: ☐ Client ☐ SunStar Courier ☐ GSO ☐ FedEx ☐ Other

If Courier, Received by: DAN

Date/Time Courier Received: 9.19.18 1540

Lab Received by: SUNNY

Date/Time Lab Received: 9.19.18 1856

Total number of coolers received:

Temperature: Cooler #1	2.9	°C +/- the CF (1.2°C) =	4.1	°C corrected temperature
Temperature: Cooler #2		°C +/- the CF (1.2°C) =		°C corrected temperature
Temperature: Cooler #3		°C +/- the CF (1.2°C) =		°C corrected temperature
Temperature criteria = ≤ 6°C (no frozen containers)		Within criteria?	☒ **Yes**	☐ **No**
If NO:				
Samples received on ice?		☐ Yes	☐ **No → Complete Non-Conformance Sheet**	
If on ice, samples received same day collected?		☐ Yes → Acceptable	☐ **No → Complete Non-Conformance Sheet**	

Custody seals intact on cooler/sample	☐ Yes	☐ No*	☒ N/A
Sample containers intact	☐ Yes	☒ No*	
Sample labels match Chain of Custody IDs	☒ Yes	☐ No*	
Total number of containers received match COC	☒ Yes	☐ No*	
Proper containers received for analyses requested on COC	☒ Yes	☐ No*	
Proper preservative indicated on COC/containers for analyses requested ?	☒ Yes	☐ No*	☐ N/A
Complete shipment received in good condition with correct temperatures, containers, labels, volumes preservatives and within method specified holding times	☐ **Yes**	☒ **No***	

* Complete Non-Conformance Receiving Sheet if checked

Cooler/Sample Review - Initials and date: BC 9.20.18

SAMPLE NON-CONFORMANCE SHEET

Batch/Work Order # _____

- **COOLERS**
  - ☐ Not Received (received COC only)
  - ☐ Leaking/Damaged
  - ☐ Other:
- **CUSTODY SEALS**
  - ☐ None
  - ☐ Not Intact
- **TEMPERATURE (Temp criteria = ≤ 6°C)**
  - ☐ Cooler/Sample Temp(s)
  - ☐ Temperature Blank(s)
- **CHAIN OF CUSTODY (COC)**
  - ☐ Not relinquished by client; No date/time relinquished
  - ☐ Incomplete information provided
  - ☐ COC not received – notify PM
- **CONTAINERS**
  - ☐ Leaking ☐ Broken
  - ☐ Extra ☐ Missing
- **LABELS**
  - ☐ Not the same sample ID / info as on the COC
  - ☐ Incomplete Information
  - ☐ Markings/Info illegible
- **SAMPLES**
  - ☐ Samples **NOT RECEIVED** but listed on COC
  - ☐ Samples received but **NOT LISTED** on COC
  - ☐ Logged based on Label Information and not COC
  - ☐ Logged according to Work Plan and not COC
  - ☐ Logged in, **ON HOLD** until further notice
  - ☐ Insufficient quantities for analysis
  - ☐ Improper container used
  - ☐ Mislabeled as to tests, preservatives, etc.
  - ☐ Holding time expired – list sample ID and test
  - ☐ Not preserved/Improper preservative used
  - ☐ Without Labels, no information on containers
  - ☐ Other

Comments: B4-2.5DUP 4oz JAR RECEIVED BROKEN & IN A PLASTIC BAG. ALL 6-5035 KITS HAVE TERRAPHASE COVERING THE WEIGHTS ON EACH VOA. HCL WRITTEN ON EACH VOA OF THE 5035 KITS AS WELL

Sample fractioning only if broken container compromises other samples or if out of temp reading impacts more than one cooler

Fraction													Preser.

Clare,

Please find attached revised work orders reflecting the additional STLC testing. Details are documented in the comments section (right hand side). We will have the additional STLC results for you before end of day Wednesday 11/28 as a standard 5-day TAT.

Let us know if you need anything else!

Happy Thanksgiving ☺

Rose Fasheh
Project Manager

SunStar Laboratories

25712 Commercentre Dr., Lake Forest, CA 92630

Shipping Alert:
Please note that SunStar Laboratories will be observing the Thanksgiving Holidays on Thursday and Friday, November 22nd and 23rd. In addition, GSO will not have scheduled service on Thursday, November 22nd. If you have any short hold samples arriving near or during these days, please contact your Project Manager in advance to ensure all holding times are met for your samples. SunStar will be available on Saturday, November 24th if needed to receive samples. Please let your Project Manager know if you will ship or deliver samples on this day.

We appreciate your business and hope that you have a wonderful and safe holiday!

Good morning Clare,

Kris no longer works with SunStar, but I will go ahead and get those going for you. Is a standard 5-day TAT okay, or did you need the results expedited?

Thank you,

Rose Fasheh

Shipping Alert:
Please note that SunStar Laboratories will be observing the Thanksgiving Holidays on Thursday and Friday, November 22nd and 23rd. In addition, GSO will not have scheduled service on Thursday, November 22nd. If you have any short hold samples arriving near or during these days, please contact your Project Manager in advance to ensure all holding times are met for your samples. SunStar will be available on Saturday, November 24th if needed to receive samples. Please let your Project Manager know if you will ship or deliver samples on this day.

We appreciate your business and hope that you have a wonderful and safe holiday!

Subject: LAUSD Hamilton STLC Analyses; Lab Reports T182803, T183211, T183212, and T182898

Hi Kris,

Would you please analyze the following samples for **STLC** analysis?

B03-1.5 (T182803-28) for lead
B10-0.5 (T182803-42) for lead

B91-1.5 (T183211-05) for lead

B12-0.5 (T183212-17) for lead
B25-05 (T183212-14) for lead

B18-2.5 (T182898-28) for arsenic

Thank you,

Clare Steedman, P.G.

This report is revised to correct QC section for 6020 Arsenic and Lead. Original report has included LCS for metals not requested by client. This report has been revised to only report LCS metals relevant to the project. The RPD in the originally report is also reported in error and is revised in this version of the report. Actualy RPD acceptance value is 20. JL 7/22/19.

Notes and Definitions

QR-04	The percent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Good Morning Clare!

I have a few things I wanted to confirm with you.

- Samples B12-0.5, -1.5, -2.5 all should be labeled as B18-0.5, -1.5, -2.5. Yes.
- Also, Sample B4-5.0 is not marked on the COC as requiring 8260 analysis, but the other samples from B4 are marked as 8260. Please confirm you would like the 8260 analysis for B4-5.0. Yes, please analyze Sample B4-5.0 for 8260.
- We're subcontracting the dioxins and furans analysis on a 20-DAY TAT. Also confirm the TAT will work for you. If you would like them faster, we can arrange that but it would be an additional charge. 20-day TAT is ok.

Thank you so much Clare!

Kris Kubota
Project Manager/Regional Account Manager

Clare,

Please find attached revised work orders reflecting the additional STLC testing. Details are documented in the comments section (right hand side). We will have the additional STLC results for you before end of day Wednesday 11/28 as a standard 5-day TAT.

Let us know if you need anything else!

Happy Thanksgiving ☺

Rose Fasheh

Shipping Alert:
Please note that SunStar Laboratories will be observing the Thanksgiving Holidays on Thursday and Friday, November 22nd and 23rd. In addition, GSO will not have scheduled service on Thursday, November 22nd. If you have any short hold samples arriving near or during these days, please contact your Project Manager in advance to ensure all holding times are met for your samples. SunStar will be available on Saturday, November 24th if needed to receive samples. Please let your Project Manager know if you will ship or deliver samples on this day.

We appreciate your business and hope that you have a wonderful and safe holiday!

Good morning Clare,

Kris no longer works with SunStar, but I will go ahead and get those going for you. Is a standard 5-day TAT okay, or did you need the results expedited?

Thank you,

Rose Fasheh
