Notes and Definitions

R-07	Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

SAMPLE RECEIVING REVIEW SHEET

Batch/Work Order #: T18321

Client Name: TERRAPHASE

Project: HAMILTON AS

Delivered by: ☐ Client ☒ SunStar Courier ☐ GSO ☐ FedEx ☐ Other

If Courier, Received by: DAN

Date/Time Courier Received: 10.22.18 / 11:11

Lab Received by: SUNNY

Date/Time Lab Received: 10.22.18 / 14:25

Total number of coolers received: 3

Temperature:	Cooler #1 2.3	°C +/- the CF (1.2°C)	= 3.5	°C corrected temperature
Temperature:	Cooler #2 3.1	°C +/- the CF (1.2°C)	= 4.3	°C corrected temperature
Temperature:	Cooler #3 2.0	°C +/- the CF (1.2°C)	= 3.2	°C corrected temperature

Temperature criteria = ≤ 6°C (no frozen containers) Within criteria? ☒ **Yes** ☐ **No**

If NO:

Samples received on ice? ☐ Yes ☐ **No → Complete Non-Conformance Sheet**

If on ice, samples received same day collected? ☐ Yes → Acceptable ☐ **No → Complete Non-Conformance Sheet**

Custody seals intact on cooler/sample ☐ Yes ☐ No* ☒ N/A

Sample containers intact ☒ Yes ☐ No*

Sample labels match Chain of Custody IDs ☒ Yes ☐ No*

Total number of containers received match COC ☒ Yes ☐ No*

Proper containers received for analyses requested on COC ☒ Yes ☐ No*

Proper preservative indicated on COC/containers for analyses requested ☒ Yes ☐ No* ☐ N/A

Complete shipment received in good condition with correct temperatures, containers, labels, volumes preservatives and within method specified holding times ☒ **Yes** ☐ **No***

* Complete Non-Conformance Receiving Sheet if checked

Cooler/Sample Review - Initials and date: BL 10.22.18

Clare,

Please find attached revised work orders reflecting the additional STLC testing. Details are documented in the comments section (right hand side). We will have the additional STLC results for you before end of day Wednesday 11/28 as a standard 5-day TAT.

Let us know if you need anything else!

Happy Thanksgiving ☺

Rose Fasheh
Project Manager

SunStar Laboratories

Shipping Alert:
Please note that SunStar Laboratories will be observing the Thanksgiving Holidays on Thursday and Friday, November 22nd and 23rd. In addition, GSO will not have scheduled service on Thursday, November 22nd. If you have any short hold samples arriving near or during these days, please contact your Project Manager in advance to ensure all holding times are met for your samples. SunStar will be available on Saturday, November 24th if needed to receive samples. Please let your Project Manager know if you will ship or deliver samples on this day.

We appreciate your business and hope that you have a wonderful and safe holiday!

Good morning Clare,

Kris no longer works with SunStar, but I will go ahead and get those going for you. Is a standard 5-day TAT okay, or did you need the results expedited?

Thank you,

Rose Fasheh

Notes and Definitions

R-07	Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Good Morning,

Attached is the work order confirmation and chain of custody we received at: 10/22/2018 at 14:25

Project: Hamilton High School
Project Number: 5030.008.003

Per Chain of Custody, the requested TAT is: 5-DAY STD
Results will be sent by COB: 10/29/2018

Please note the non-conformance. Sample B46-0.5, the 5035 kit has no methanol preservative. As of right now, it isn't a problem. If we need to run a dilution on the sample, we wil have to re-preserve the soil using a methanol VOA, and the final report would have a qualifier stating the 5035 kit was made in-house.

Please carefully review the attachments and feel free to contact me if you have any questions or concerns.

Thank you for choosing SunStar Labs!

Kris Kubota
Project Manager/Regional Account Manager

Client: **Terraphase Engineering - Irvine**
Project: **Hamilton Highschool**
Project Manager: **Kris Kubota**
Project Number: **5030.008.003**

Report To:
Terraphase Engineering - Irvine
Clare Steedman
18401 Von Karman Ave., Suite 410
Irvine, CA 92612

Date Due:	10/29/18 17:00 (5 day TAT)		
Received By:	Sunny Lounethone	Date Received:	10/22/18 14:25
Logged In By:	Brian Charon	Date Logged In:	10/22/18 15:25

Samples Received at:	**3.5°C**		
Custody Seals	No	Received On Ice	No
Containers Intact	No		
COC/Labels Agree	No		
Preservation Confirm	No

Good Morning,

Attached is the work order confirmation and chain of custody we received at: 10/22/2018 at 14:25

Project: Hamilton High School
Project Number: 5030.008.003

Per Chain of Custody, the requested TAT is: 5-DAY STD
Results will be sent by COB: 10/29/2018

Please note the non-conformance. Sample B46-0.5, the 5035 kit has no methanol preservative. As of right now, it isn't a problem. If we need to run a dilution on the sample, we wil have to re-preserve the soil using a methanol VOA, and the final report would have a qualifier stating the 5035 kit was made in-house.

Please carefully review the attachments and feel free to contact me if you have any questions or concerns.

Thank you for choosing SunStar Labs!

Kris Kubota
Project Manager/Regional Account Manager

Clare,

Please find attached revised work orders reflecting the additional STLC testing. Details are documented in the comments section (right hand side). We will have the additional STLC results for you before end of day Wednesday 11/28 as a standard 5-day TAT.

Let us know if you need anything else!

Happy Thanksgiving ☺

Rose Fasheh
Project Manager

SunStar Laboratories

Shipping Alert:
Please note that SunStar Laboratories will be observing the Thanksgiving Holidays on Thursday and Friday, November 22nd and 23rd. In addition, GSO will not have scheduled service on Thursday, November 22nd. If you have any short hold samples arriving near or during these days, please contact your Project Manager in advance to ensure all holding times are met for your samples. SunStar will be available on Saturday, November 24th if needed to receive samples. Please let your Project Manager know if you will ship or deliver samples on this day.

We appreciate your business and hope that you have a wonderful and safe holiday!

Good morning Clare,

Kris no longer works with SunStar, but I will go ahead and get those going for you. Is a standard 5-day TAT okay, or did you need the results expedited?

Thank you,

Rose Fasheh

Notes and Definitions

R-07	Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

SunStar Laboratories, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

SAMPLE NON-CONFORMANCE SHEET

Batch/Work Order # _____T183454_____

- **COOLERS**
  - ☐ Not Received (received COC only)
  - ☐ Leaking/Damaged
  - ☐ Other:
- **CUSTODY SEALS**
  - ☐ None
  - ☐ Not Intact
- **TEMPERATURE (Temp criteria = ≤ 6°C)**
  - ☐ Cooler/Sample Temp(s)
  - ☐ Temperature Blank(s)
- **CHAIN OF CUSTODY (COC)**
  - ☐ Not relinquished by client; No date/time relinquished
  - ☐ Incomplete information provided
  - ☐ COC not received – notify PM
- **CONTAINERS**
  - ☐ Leaking ☐ Broken
  - ☐ Extra ☐ Missing
- **LABELS**
  - ☒ Not the same sample ID / info as on the COC
  - ☐ Incomplete Information
  - ☐ Markings/Info illegible
- **SAMPLES**
  - ☐ Samples **NOT RECEIVED** but listed on COC
  - ☐ Samples received but **NOT LISTED** on COC
  - ☐ Logged based on Label Information and not COC
  - ☐ Logged according to Work Plan and not COC
  - ☐ Logged in, **ON HOLD** until further notice
  - ☐ Insufficient quantities for analysis
  - ☐ Improper container used
  - ☐ Mislabeled as to tests, preservatives, etc.
  - ☐ Holding time expired – list sample ID and test
  - ☐ Not preserved/Improper preservative used
  - ☐ Without Labels, no information on containers
  - ☐ Other

Comments:

5035 VOAs for sample 04 on COC (B60-5.0) are marked as SV60-5.0. Sample 19 on COC (B56-2.5) is marked as B56-5.0, received two jars marked as this and labeled by matching the times.

Sample fractioning only if broken container compromises other samples or if out of temp reading impacts more than one cooler

Fraction													Preser.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to possible sample matrix effect.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
QB-01	The method blank contains analyte at a concentration above the MRL; however, concentration is less than 10% of the sample result, which is negligible according to method criteria.
M-02	Multiple analysis yielded poor internal standard and/or surrogate recoveries due to matrix effect. Results reported are from the most complete recovery of internal standards, however, recoveries were not within the acceptable limits of the method.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

  - ☐ Markings/Info illegible
- **SAMPLES**
  - ☐ Samples **NOT RECEIVED** but listed on COC
  - ☐ Samples received but **NOT LISTED** on COC
  - ☐ Logged based on Label Information and not COC
  - ☐ Logged according to Work Plan and not COC
  - ☐ Logged in, **ON HOLD** until further notice
  - ☐ Insufficient quantities for analysis
  - ☐ Improper container used
  - ☐ Mislabeled as to tests, preservatives, etc.
  - ☐ Holding time expired – list sample ID and test
  - ☐ Not preserved/Improper preservative used
  - ☐ Without Labels, no information on containers
  - ☐ Other

Comments: No sampling times. There are two 5035 kits labeled as (SV64-10.0(22)) which means one of them must be sample (SV62-10.0).

Sample fractioning only if broken container compromises other samples or if out of temp reading impacts more than one cooler

Fraction													Preser.

Lab Request: 412613
Report Date: 02/26/2019
Date Received: 02/19/2019
Client ID: 15743

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Engineering Project: _____

Date Received: 02/19/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.4 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 0.4 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 2/19/19

Enthalpy Analytical Field Technician Request Form

Version # 2.7
Effective 9/10/15

Lab Request: 416244
Report Date: 06/20/2019
Date Received: 06/12/2019
Client ID: 15743

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID	Sample #	Client Sample ID
416244-001	B53C - 5.0	416244-025	B57A - 10.0
416244-002	B53B - 5.0	416244-026	B57A - 15.0
416244-003	B53A - 5.0	416244-027	B57B - 10.0
416244-004	B53D - 5.0	416244-028	B57B - 15.0

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Project: Hamilton HS

Date Received: 6/12/19 Sampler's Name Present: [X] Yes [ ] No

Section 2

Sample(s) received in a cooler? [✓] Yes, How many? 1 [ ] No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 7.5 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: [✓] Ice [ ] Ice Packs [ ] Bubble Wrap [ ] Styrofoam [ ] Paper [ ] None [ ] Other _____

Cooler Temp (°C): #1: 3.7 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? [ ] Verbal PM Initials: _____ Date/Time _____

[ ] Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: [signature] Date: 06/12/19

Lab Request: 416293
Report Date: 06/21/2019
Date Received: 06/13/2019
Client ID: 15743

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID	Sample #	Client Sample ID	Sample #	Client Sample ID

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Engineering

Project: Hamilton HS

Date Received: 6/13/19

Sampler's Name Present: ☒ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 2 ☐ No (skip section 2)

Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 10.7 #2: 11.2 #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 4.0 #2: 2.3 #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: [signature] Date: 06/13/19

Supplemental Report

Lab Request: 416329
Report Date: 06/28/2019
Date Received: 06/14/2019
Client ID: 15743

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Engineering Project: Hamilton HS

Date Received: 6/14/19 Sampler's Name Present: [X] Yes [ ] No

Section 2

Sample(s) received in a cooler? [✓] Yes, How many? ~~1~~ 2 (ff 6/14) [ ] No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 23.6 #2: 10.6 #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: [✓] Ice [ ] Ice Packs [ ] Bubble Wrap [ ] Styrofoam [ ] Paper [ ] None [ ] Other _____

Cooler Temp (°C): #1: 12.5 #2: 5.2 #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.		✓	
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Missing: -034, -039 (1 jar), -043 (3 VOA vials), -046 (3 VOA vials).
Sample -008: 3 vials received, but no 5035 tests requested.
1 ~~3 jars~~ jar and 3 vials received w/ no label from client.

Section 6

For discrepancies, how was the Project Manager notified? [ ] Verbal PM Initials: _____ Date/Time _____
[X] Email (email sent to/on): DG / 6/14/19

Project Manager's response:
Client confirmed unlabeled jar was for sample -046. (ff 6/17)

Lab Request:	418214
Report Date:	08/20/2019
Date Received:	08/12/2019
Client ID:	15743

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
418214-001	B20BB-0.5
418214-002	B11BB-2.5
418214-004	B11DD-1.5

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Project: Hamilton HS

Date Received: 8/12/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 1.8 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 0.2 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: [signature] Date: 8/12/19

MONTROSE ENVIRONMENTAL

Client:	Terraphase Engineering	Lab Request:	418425
Address:	18401 Von Karman Ave, Suite #410 Irvine, CA 92612	Report Date:	08/28/2019
		Date Received:	08/16/2019
		Client ID:	15743
Attn:	Clare Steedman		
Comments:	Hamilton HS S030.008 Revised Report		

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
418425-001	B25-BB-0.5
418425-002	B25-DD-0.5
418425-003	B03-CC-1.5

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Diane M. Galvan

Report Review performed by: Diane Galvan, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 45 days from date received.

The reports of the Enthalpy Analytical, Inc. are confidential property of our clients and may not be reproduced or used for publication in part or in full without our written permission. This is for the mutual protection of the public, our clients, and ourselves.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Project: _____

Date Received: 08/16/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 6.8 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 0.3 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 8/16/19

Revised report to show Arsenic result for sample B20-BBB-0.5-DUP.

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Project: Hamilton HS

Date Received: 11/25/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 3.8 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 0.2 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		✓	
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 11/25/19

2295 Robertson Blvd, Los Angeles, CA

Revised report to include additional metals test results requested on 12/11/19.

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID	Sample #	Client Sample ID

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

Subject: RE: Revised Hamilton HS (11/23/19) - Enthalpy Analytical Final Report #421801

Yes please, run the STLC/TCLP on the sample that had the 1,030 mg/kg lead result, 421801-23.
Clare

Subject: RE: Revised Hamilton HS (11/23/19) - Enthalpy Analytical Final Report #421801

Hi Clare,

Sample number 421801-23 has only 3 B's in the sample ID. This is the sample that needs STLC and TCLP, correct? It had total Lead result of 1030 mg/kg. The sample ID with 4 B's is my number -24 and you had just requested Total Lead for that sample last week.

In observance of Christmas and New Year, Enthalpy Analytical will be closed on Tuesday December 24th at 2PM through Thursday December 26th and Wednesday January 1st. Normal operation will resume on Friday December 27th through December 31st and on Thursday January 2nd. During this period, samples with holding time less than 48 hours will only be accepted if they were pre-arranged with the project managers. Please be advised that holiday surcharges might apply.

With Regards,

Patty Mata
Project Manager

Hi Patty,

Would you please run the following analyses on regular turn? Thanks!

421801-023, B12-BBBB-0.5: STLC and TCLP leaching, then 6020 for lead
412801-017, B11-DDD-1.5: STLC and TCLP leaching, then 6020 for arsenic

Hi Clare Steedman,

Attached is your revised final report #421801. We corrected the metal for sample B20-BBB-0.5-DUP in this report. Sorry again for the error!

Thank you.

In accordance with our paperless initiative, we are no longer mailing or faxing reports by default. If you require a hard copy, please inform your Project Manager.

Data qualifiers and additional information necessary for the interpretation of the test results are contained in the PDF file and may not be included in the EDD.

With Regards,

Patty Mata

Subject: RE: Hamilton HS (11/23/19) - Enthalpy Analytical Final Report #421801

Thank you Patty.

Please run the following held analyses:

- 421801-019, B20-BBBB-0.5, for arsenic by 6020
- 421801-024, B12-BBBB-0.5 for lead by 6020

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Project: Hamilton HS

Date Received: 11/25/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 3.8 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 0.2 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		✓	
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 11/25/19

MONTROSE ENVIRONMENTAL

Client:	Terraphase Engineering	Lab Request:	421801
Address:	18401 Von Karman Ave, Suite #410 Irvine, CA 92612	Report Date:	02/04/2020
		Date Received:	11/25/2019
		Client ID:	15743
Attn:	Clare Steedman		

Comments: Hamilton HS, #S030.008.003, 2295 Robertson Blvd, Los Angeles, CA
Revised report to include additional metals test results requested on 12/11/19, and to include following note.
The base MDL/RL limits do not include the 100x dilution for the EPA 6020 STLC Method Blank in batch QC1212551 due to software limitation. The STLC Method Blank limits are actually 10 ug/L and 50 ug/L, which would make the 11.8 ug/L Method Blank detection a "J" flagged estimated value.

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

Subject: RE: Revised Hamilton HS (11/23/19) - Enthalpy Analytical Final Report #421801

Yes please, run the STLC/TCLP on the sample that had the 1,030 mg/kg lead result, 421801-23.
Clare

Subject: RE: Revised Hamilton HS (11/23/19) - Enthalpy Analytical Final Report #421801

Hi Clare,

Sample number 421801-23 has only 3 B's in the sample ID. This is the sample that needs STLC and TCLP, correct? It had total Lead result of 1030 mg/kg. The sample ID with 4 B's is my number -24 and you had just requested Total Lead for that sample last week.

In observance of Christmas and New Year, Enthalpy Analytical will be closed on Tuesday December 24th at 2PM through Thursday December 26th and Wednesday January 1st. Normal operation will resume on Friday December 27th through December 31st and on Thursday January 2nd. During this period, samples with holding time less than 48 hours will only be accepted if they were pre-arranged with the project managers. Please be advised that holiday surcharges might apply.

With Regards,

Patty Mata
Project Manager

Subject: RE: Revised Hamilton HS (11/23/19) - Enthalpy Analytical Final Report #421801

Hi Patty,

Would you please run the following analyses on regular turn? Thanks!

421801-023, B12-BBBB-0.5: STLC and TCLP leaching, then 6020 for lead
412801-017, B11-DDD-1.5: STLC and TCLP leaching, then 6020 for arsenic

Hi Clare Steedman,

Attached is your revised final report #421801. We corrected the metal for sample B20-BBB-0.5-DUP in this report. Sorry again for the error!

Thank you.

In accordance with our paperless initiative, we are no longer mailing or faxing reports by default. If you require a hard copy, please inform your Project Manager.

Data qualifiers and additional information necessary for the interpretation of the test results are contained in the PDF file and may not be included in the EDD.

With Regards,

Patty Mata
Project Manager

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase Project: Hamilton HS

Date Received: 11/25/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 3.8 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 0.2 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		✓	
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 11/25/19

MONTROSE ENVIRONMENTAL

Client:	Terraphase Engineering
Address:	18401 Von Karman Ave, Suite #410 Irvine, CA 92612
Attn:	Clare Steedman
Comments:	Hamilton HS S030.008.003 2955 S Robertson Blvd

Lab Request:	423978
Report Date:	01/30/2020
Date Received:	01/21/2020
Client ID:	15743

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
423978-001	DRUM 1
423978-002	DRUM 2
423978-003	DRUM 3
423978-004	DRUM 4
423978-005	WASTE-1.21.20

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Report Review performed by: Patricia Mata, PM

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 45 days from date received.

The reports of the Enthalpy Analytical, Inc. are confidential property of our clients and may not be reproduced or used for publication in part or in full without our written permission. This is for the mutual protection of the public, our clients, and ourselves.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Terraphase

Project: Hamilton H5

Date Received: 01/21/20

Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☐ Yes, How many? _____ ☑ No (skip section 2)

Sample Temp (°C) (No Cooler): 18.2

Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☐ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

LABORATORY RESULTS

Client:	Terraphase Engineering Inc.	**Report date:**	11/26/2018
Client Address:	18401 Von Karmen Ave Irvine, CA 92612	**JEL Ref. No.:**	D-1552
		Client Ref. No.:	S030.008.003
Attn:	Clare Steedman	**Date Sampled:**	11/21/2018
		Date Received:	11/21/2018
Project Name:	Hamilton High School	**Date Analyzed:**	11/21/2018
Project Address:	2955 S Robertson Blvd Los Angeles, CA 90034	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Colby Wakeman

Attn:	Wes Skillings	**Date Sampled:** **Date Received:**	6/14/2019 6/14/2019
Project Name:	Hamilton High School	**Date Analyzed:**	6/14/2019
Project Address:	2955 S Robertson Blvd Los Angeles, CA 90034	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then collected.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval: Annalise O'Toole

Toluene-d_8	105%	105%		60 - 140	105%	60 - 140
4-Bromofluorobenzene	94%	96%		60 - 140	97%	60 - 140

LCS = Laboratory Control Sample
LCSD = Laboratory Control Sample Duplicate
CCV = Continuing Calibration Verification
RPD = Relative Percent Difference; Acceptability range for RPD is ≤ 20%

@ = Surrogate outside acceptable limits. All other QC parameters in control, therefore data was accepted.

LABORATORY RESULTS

Client:	Terraphase Engineering	**Report date:**	08/31/2018
Client Address:	18401 Von Karman Ave., Suite 410 Irvine, CA 92612	**JEL Ref. No.:** **Client Ref. No.:**	F-0170 S030.008.003
Attn:	Clare Steedman	**Date Sampled:** **Date Received:**	08/31/2018 08/31/2018
Project Name:	Hamilton High School	**Date Analyzed:**	08/31/2018
Project Address:	2955 South Robertson Blvd. Los Angeles, CA 90034	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Colby Wakeman
QA/QC Manager

LABORATORY RESULTS

Client:	Terraphase Engineering	**Report date:**	9/19/2018
Client Address:	18401 Von Karman Ave Ste 410 Irvine, CA 92612	**JEL Ref. No.:** **Client Ref. No.:**	F-0180 S030.008.003
Attn:	Clare Steedman	**Date Sampled:** **Date Received:**	9/19/2018 9/19/2018
Project Name:	Hamilton High School	**Date Analyzed:**	9/19/2018
Project Address:	2955 South Robertson Blvd Los Angeles, CA 90034	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval: _____

ANALYSES REQUESTED

1. TO-15 – Volatile Organics by GC/MS

Soil Gas samples were collected in 1-Liter SUMMA Canisters

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the TO-15 analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCVD) and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verification Duplicate (CCVD) was analyzed with each batch of Soil Gas samples.

ANALYSES REQUESTED

1. TO-15 – Volatile Organics by GC/MS

Soil Gas samples were collected in 1-Liter SUMMA Canisters

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the TO-15 analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCVD) and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verification Duplicate (CCVD) was analyzed with each batch of Soil Gas samples.

Project: **Project Address:**	Hamilton High School 2955 South Robertson Boulevard Los Angeles, CA 90034	**Date Analyzed:** **Physical State:**	11/29-11/30/18 Soil Gas

ANALYSES REQUESTED

1. EPA TO-15 – Volatile Organics by GC/MS

Analytical – Indoor Air samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification, QC Reference Standards, and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were analyzed with each batch of Indoor Air samples.

Approval:

Steve Jones, Ph.D.
Laboratory Manager

Project:	Hamilton High School	**Date Analyzed:**	6/22/2019
Project Address:	2955 S. Robertson Boulevard Los Angels, CA 90034	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA TO-15 – Volatile Organics by GC/MS

Analytical – Soil Gas samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCV) and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verificatio n Duplicate (CCVD) was analyzed with each batch of Soil Gas samples.

H&P Project: TP112619-11
Client Project: 5030.008.003 / 2955 S. Robertson Blvd.

Dear Clare Steedman:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 11/25/2019-11/26/2019which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

Notes and Definitions

QL-1H	The LCS and/or LCSD recoveries fell above the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased high.
B	Analyte is found in the associated blank as well as in the sample.
B	Analyte is found in the associated blank as well as in the sample.
LCC	Leak Check Compound
ND	Analyte NOT DETECTED at or above the reporting limit
MDL	Method Detection Limit
%REC	Percent Recovery
RPD	Relative Percent Difference

All soil results are reported in wet weight.

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs through PJLA, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743 & 2745.

H&P is approved by the State of Louisiana Department of Environmental Quality under the National Environmental Laboratory Accreditation Conference (NELAC) certification number 04138

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

BORING PERMIT

ENVIRONMENTAL HEALTH

Drinking Water Program

5050 Commerce Drive, Baldwin Park, CA 91706
Telephone: (626) 430-5420 • { HYPERLINK "http://publichealth.lacounty.gov/eh/ep/dw/dw_main.htm" }

COUNTY OF LOS ANGELES
Public Health

Work Plan Approval

WORK SITE ADDRESS	CITY	ZIP	EMAIL ADDRESS
2955 South Robertson Blvd	Los Angeles	90034	clare.steedman@terraphase.com

NOTICE:

- WORK PLAN APPROVALS ARE VALID FOR 180 DAYS. 30 DAY EXTENSIONS OF WORK PLAN APPROVALS ARE CONSIDERED ON AN INDIVIDUAL (CASE-BY-CASE) BASIS AND MAY BE SUBJECT TO ADDITIONAL PLAN REVIEW FEES (HOURLY RATE AS APPLICABLE).
- WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- WORK PLAN APPROVALS ARE LIMITED TO COMPLIANCE WITH THE CALIFORNIA WELL STANDARDS AND THE LOS ANGELES COUNTY CODE AND DOES NOT GRANT ANY RIGHTS TO CONSTRUCT, RENOVATE, OR DECOMMISSION ANY WELL. THE APPLICANT IS RESPONSIBLE FOR SECURING ALL OTHER NECESSARY PERMITS SUCH AS WATER RIGHTS, PROPERTY RIGHTS, COASTAL COMMISSION APPROVALS, USE COVENANTS, ENCROACHMENT PERMISSIONS, UTILITY LINE SETBACKS, CITY/COUNTY PUBLIC WORKS RIGHTS OF WAY, ETC.
- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.

TO BE COMPLETED BY DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM:

X	WORK PLAN APPROVED FOR: 9 Soil Borings/Exp. Holes	**PERMIT NUMBER:**	SR0174608	**DATE:**	2-13-2019

ADDITIONAL APPROVAL CONDITIONS:

- Work plan approval is issued for scope of work submitted to the Drinking Water Program. Any modifications to the scope of work will require additional work plan review.
- Ensure the boring/exploration hole is backfilled within 24 hours of boring construction.
- Ensure to backfill using a tremie pipe under pressure or equivalent equipment with approved cement grout, proceeding upward from the bottom of the boring/exploration hole.
- Ensure soil borings are sealed per California Well Standards 74-90
  - Cement grout mix ratio of 5-6 gallons of water per 94-pound bag of Portland cement.
  - Up to 6% of Bentonite may be added to the cement-based mix.
  - No hydrated Bentonite chips
- Borings/Exploration holes must comply with all applicable requirements published in the California Well Standards (Bulletins 74-81 and 74-90) and the Los Angeles County Code, Title 11.

Date:
February 13, 2020

Project Number:
S030.008.004

Subject: Data Validation Memo – LAUSD Alexander Hamilton High School

---

This memorandum summarized the finding of a level II data validation for analytical results of 482 soil samples (including 55 duplicate samples), 11 water samples (all equipment blanks), and 101 soil vapor samples (including nine field replicate samples and seven method replicate samples) collected at Alexander Hamilton High School in Los Angeles, California.

DATA VALIDATION METHODS

The Quality Assurance objectives of the investigation are to assure that sampling, analysis and reporting activities provide data that are accurate, precise, representative, and legally defensible. Quality Control represents the specific steps and procedures followed during the project to achieve quality assurance. Data validation is a process of evaluating the performance of data collection against the predetermined method, procedural, or contractual requirements specified. It checks for improper practices, abuse and warning signs shown during the investigation. It determines if the available data satisfies the projects data quality objectives and data use requirements by evaluating the data reports for field sampling procedures, laboratory performance and error checks.

Terraphase conducted this Level II data validation for analytical results prepared by SunStar Laboratories Inc. of Lake Forest, California (SunStar), Enthalpy Analytical of Orange, California (Enthalpy), Jones Environmental of Santa Fe Springs, California (Jones), and H&P Mobile Geochemistry Inc. of Carlsbad, California (H&P), including review of project QC program, sampling produces, analytical procedures, data reports and DQOs. Each review is presented below. The review of data reports and DQOs are discussed separately by media.

Review of Sampling Procedures

Terraphase staff supervised the sampling activities performed to date at the site. Field activities were planned, conducted, and completed in a manner consistent with the Updated Preliminary Environmental Assessment Equivalent (PEA-E) Proposed Sampling Summary, prepared by Roux Environmental Engineering and Geology, dated April 20, 2018. No findings were identified affecting the quality of the samples collected or the resulting data results.

Field Documentation

Field logs and other documents were reviewed by Clare Steedman, the Terraphase project manager, regarding sampling procedures (e.g. sample containers, collection, preservation, packaging, transportation, receipt, handling and storage, chain of custody, holding time, and decontamination procedures) conducted at the site during the PEA-E sampling. Samples were transferred to the lab under standard chain of custody protocol.

Boring Logs

Boring logs for the sampling conducted on date were reviewed by Clare Steedman, a California-licensed Professional Geologist.

Review of Analytical Procedures

Terraphase evaluated analytical methods used, laboratory certification, and reporting limits. Analytical procedures were conducted in line with referenced method standard operating procedures. No findings were identified affecting the quality of the samples collected or the resulting data results.

Analytical Method

Samples were analyzed for the following analytes by methods described below, respectively.

Soil Analytical Methods:

Samples were analyzed for metals by EPA method 6010 (Title 22 Metals), OCPs by EPA method 8081A, PCBs by EPA method 8082, VOCs by EPA method 8260, SVOCs by EPA method 8270C (also C SIM), TPH by 8015M (Ext.), dioxins and furans by EPA method 8290, and lead and arsenic by EPA method 6020.

Soil Vapor Analytical Methods:

Samples were analyzed for VOCs by EPA methods 8260SV and TO-15.

Laboratory Certification

Samples were analyzed by Sun Star, Jones, H&P, and Enthalpy. Each lab holds its own accreditation through the Environmental Laboratory Accreditation Program (ELAP).

Reporting Limits

Reporting limits were below screening levels with the following exceptions: cadmium, thallium, 1,4-dichloro-2-butene in soil and 1,2,3-trichloropropene, 1,2-dibromo-3-chloropropane, 1,2-diobromethane, and vinyl chloride in soil vapor.

SOIL DATA VALIDATION

Review of Laboratory Reports

The data were reviewed in accordance with the National Functional Guidelines for Superfund Organic Methods Data Review, (January 2017; (USEPA-540-R-2017-002), with the National Functional Guidelines for Superfund Inorganic Methods Data Review, (January 2017; (USEPA-540-R-2017-001), Department of Toxic Substances Control, the Los Angeles Regional Water Quality Control Board, and the San Francisco Regional Water Quality Control Board Advisory – Active Soil Gas Investigations (July 2015), the pertinent methods referenced by the data package, and professional and technical judgment. Data verification and validation were performed in performed in general conformance with the Stage 2 validation described in the Guidance for Labelling Externally Validated Laboratory Analytical Data for Superfund Use (USEPA 2009).

Data Package Completeness

A case narrative was not included for any soil laboratory reports from SunStar Laboratory or Enthalpy Laboratory. The laboratory project managers were contacted directly, and confirmed that all samples were received intact, in the correct containers, appropriately labeled and preserved. All other required elements of the data packages were present, including: chain-of-custody, sample receipt checklist, results, and QC results.

Verification of Electronic Data Deliverable to Hardcopy Data Package

Sample results and related quality control data were received in both an electronic and hardcopy format.

Chain of Custody

For report T182803f, samples B61-5.0, B61.10.0, and B61-15.0 were incorrectly labeled as B60-5.0, B60-10.0, and B60-15.0 and corrected by the lab.

For report T182898f samples B18-0.5, B18-1.5, and B18-2.5 were mislabeled B12-0.5, B12-1.5, and B12-2.5 when received and were corrected by the lab. Sample B4-5.0 was not marked for 8260 on the COC, Terraphase was contacted and 8260 analysis was added.

For report T183454f sample 04 on the COC (B60-5.0) was marked as SV60-5.0 and sample 19 (B56-2.5) was marked as B56-5.0. These two jars were mislabeled and updated at the lab by matching the sample times.

For report T183494f the COC arrived without sample times. Two samples arrived with the same sample label of SV64-10.0, one was relabeled SV62-10.0. Terraphase was contacted by the lab and the samples were identified based on the times listed on the samples and the field logs.

For report 416329, the following were missing when received by the lab: missing all containers for B102-0.5-DUP (416329-034); B100-2.5 missing one jar (416329-039); B99-2.5 missing 3 VOAs (416329-043); B98-2.5 missing 3 VOAs (416329-046); B79-2.5 3 VOAs were received but 5035 test not requested (416329-008); and 1 jar and 3 VOAs were not labeled. Terraphase was contacted by the lab and confirmed that the unlabeled jar and VOAs were sample B98-2.5 (416329-046).

For report 418425 the third sample B03-CC-1.5 was initially incorrectly logged by the lab as B25-CC-1.5. The lab was contacted by Terraphase and the login mistake was resolved.

All other sample identification (ID) numbers listed on the chain-of-custody record are consistent with the sample ID reported in the laboratory electronic data deliverable (EDD) and hardcopy data package.

Sample Preservation

For report 416244 soil samples were received at temperatures of 7.5 degrees Celsius. For report 416293 soil samples were received at temperatures of 10.7 and 11.2 degrees Celsius. For report 416329 soil samples were received at temperatures of 12.5 and 5.2 degrees Celsius. For report T183454f soil samples were received at temperatures of 5.1 and 6.3 degrees Celsius. For report T183494f soil samples were received at temperatures of 11.2 and 12.4 degrees Celsius. For report T183495f soil samples were received at temperatures of 11.3 and 13.3 degrees Celsius. For report 418214 soil samples were received at a temperature of 1.8 degrees Celsius. For report 418425 soil samples were received at a temperature of 6.8 degrees Celsius. Proper preservation includes samples chilled to 4 ± 2 degrees Celsius. Samples were received on ice directly from the field and the cooling process had begun.

All other samples were preserved within the acceptable range of 4 ± 2 degrees Celsius.

For report T182898f sample B4-2.5-DUP 4-ounce jar was received broken and in a plastic bag at the SunStar Lab.

For report T183212f sample B46-0.5 did not have any methanol in the container as noted by the laboratory when they received it.

Holding Times

For report 416329 sample EB-03 (lab # 416329-071) was extracted/analyzed past the holding time for TPH-diesel and TPH-motor oil.

All other samples were analyzed within the proper holding times.

Method Blank Analysis

In laboratory report 416244 antimony and arsenic were detected in the method blank sample for batch QC1203116, antimony was detected in the method blank sample for batch QC1203117, and antimony and molybdenum were detected in the method blank sample for batch QC1203163. Method blank sample detections were J flagged by the laboratory indicating estimated values. Analytes were not detected in the associated samples; therefore, no results were qualified.

In laboratory report 416293 copper, molybdenum, and thallium were detected in the method blank sample for batch QC1203159; antimony, copper, iron, lead, molybdenum, silver, and thallium were detected in the method blank for batch QC1203270. Iron in batch QC1203270 was detected above the reporting limit. All other method blank sample detections were J flagged by the laboratory indicating estimated values. Detections in associated samples were qualified.

In laboratory report 416329 methylene chloride was detected in the method blank sample for batches QC1203262 and QC1203265, antimony was detected in the method blank sample for batch QC1203337, thallium was detected in the method blank sample for batch QC1203350MB1, TPH diesel was detected in the method blank in batches QC1203649 and QC1203649. Method blank sample detections were J flagged by the laboratory indicating estimated values. Analytes detected in the associated samples were qualified.

For report T183494f the method blank contains analyte at a concentration above the MRL in batch 8112638 for copper and zinc; however, concentration is less than 10% of the sample result, which is negligible according to method criteria.

For report 421801 the reported value of methylene chloride in the method blank has a J flag which is defined by the laboratory by an estimated value for batch QC1209213 and batch QC1209237. For batch QC1209268 antimony and selenium were present in an associated method blank and the value for selenium has a J flag which is defined by the laboratory by an estimated value. The base MDL/RL limits do not include the 100x dilution for the EPA 6020 STLC Method Blank in batch QC1212551 due to software limitation at the laboratory. The STLC Method Blank limits are actually 10 µg/L and 50 µg/L, which would make the 11.8 µg/L Method Blank detection a “J” flagged estimated value.

No other target compounds were detected in the method blank samples.

Laboratory Control Samples

For report 416244 the laboratory control sample (LCS) percent recovery was out of laboratory control limits for beryllium. Beryllium was not detected in any samples associated with this sample batch, therefore, no results was qualified.

For report 416329 the LCS percent recovery was out of control limits for endrin aldehyde in batch QC1203294 and endrin ketone in batch QC1203440. Endrin aldehyde and endrin ketone were not detected in any samples associated with this sample batch, therefore, no results were qualified.

For report T182898f, the original report included LCS for metals not requested by Terraphase. The report was then revised to only report LC metals relevant to the project. This report was revised to correct QC section for 6020 Arsenic and Lead. The RPD in the original report is also reported in error and was revised. Actual RPD acceptance value is 20.

For report 418425, the LCS or laboratory control sample duplicate (LCSD) was out of control limits for beryllium. Associated sample data was reported with qualifier.

All percent recovery values for LCS were within acceptable criteria established by the laboratory for the respective testing methods.

Surrogate Compound Recovery

Surrogate compound recovery was not performed for reports 412613, 416244, 418214, and 418425. Precision was evaluated using the laboratory control sample analysis.

For report 416329 the surrogate recovery was out of control limits for Decachlorobiphenyl DCB in sample B108-1.5 due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.

For report T182803f the surrogate recovery was below acceptance criteria for 4-Bromofluorobenzene in samples B53-15.0 and B65-10.0 because of possible matrix effect. The surrogate recovery was within acceptance criteria in the associated method blank and LCS. Surrogate recovery was below acceptance criteria for Decachlorobiphenyl in samples B03-1.5, B03-2.5, B07-0.5, B07-1.5, B07-2.5, B08-0.5 and B08-1.5. The data was accepted based on valid recovery of the remaining surrogate.

For report T183494f multiple analysis yielded poor internal standard and/or surrogate recoveries due to matrix effect. Results reported are from the most complete recovery of internal standards, however, recoveries were not within the acceptable limits of the method. The surrogate recovery for sample SV56-10.0 (lab # T183494-04) is outside of established control limits due to possible sample matrix effect. The surrogate recovery for sample SV55-15.0 (lab # T183494-07) is outside of established control limits due to possible sample matrix effect.

All other percent recovery values for surrogate compounds were within acceptable criteria established by the laboratory for the respective testing methods.

Sample Duplicate Analysis

Sample duplicate analysis was not performed for report 412613, 416244, 416293, 416329, T182803f_addl, T182898f_addl, T183211f_addl, T183212f_addl, T183495f, 418214, 418425, and 421801. Precision was evaluated using the laboratory control sample analysis.

For report T183211f the spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference in the sample duplicate for chromium and lead for batch 8102322. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.

All other relative percent differences (RPDs) for sample duplicates were within acceptable criteria established by the laboratory for the respective testing methods.

Blank Spike/Blank Spike Duplicate Analyses

Blank spike and blank spike duplicate analysis was not performed for reports 412613, 416244, 416293, 416329, T182898f, T182726f, 418214, 418425, and 421801. Precision was evaluated using the laboratory control sample analysis.

All other percent recoveries and relative percent differences (RPDs) for blank spikes and blank spike duplicates were within acceptable criteria established by the laboratory for the respective testing methods.

Matrix Spike/Matrix Spike Duplicate Analyses

For report 416244 the percent recovery for antimony in the matrix spike and matrix spike duplicate in batches QC1203116, QC1203117 were below laboratory control limits due to matrix interference. The percent recovery for antimony, beryllium, and zinc for the matrix spike and matrix spike duplicate in batches QC1203163 were outside of laboratory control limits due to matrix interference. The associated LCS samples were within control limits and no results were qualified.

For report 416293 the percent recovery for heptachlor in the matrix spike and matrix spike duplicate in batch QC1203239 was above laboratory control limits due to matrix interference. The percent recovery for antimony matrix spike and matrix spike duplicate in batch QC1203270 was below laboratory control limits due to matrix interference. The percent recovery for arsenic and lead in the matrix spike duplicate in batch QC1203275 was below laboratory control limits due to matrix interference. The relative percent difference for lead in batch QC1203275 was outside of laboratory control limits due to matrix interference. The associated LCS samples were within control limits and no results were qualified.

For report 416329 the percent recovery for antimony in the matrix spike and matrix spike duplicate in batch QC1203337. The percent recovery for 4,4'-DDE and methoxychlor in the matrix spike and matrix spike duplicate in batch QC1203340 and 4,4'-DDE in the matrix spike and matrix spike duplicate in batch QC1203448 were not within control limits due to matrix interference. The results for endrin, endrin aldehyde, endrin ketone, and methoxychlor in batch QC1203448 were not within control limits due to matrix interference. The results for PCB-1260 in batch QC1203449 were not within control limits due to matrix interference. The associated LCS and /or LCSD results were within control limits and the sample data was reported without further clarification.

For report T182726f the matrix spike and matrix spike duplicate percent recoveries were outside of acceptance criteria for chromium, the associated post spike percent recovery results were within acceptance criteria and results were accepted. The matrix spike and matrix spike duplicate percent recoveries were outside of acceptance criteria for barium, the associated LCS and/or LCSD results were within control limits and results were accepted.

For report T182803f the percent recovery was outside acceptance criteria for arsenic, barium, chromium and lead the matrix spike and matrix spike sample duplicate in multiple batches. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results. The spike recovery and or RPD was outside acceptance limits for the MS and/or MSD for barium, lead, arsenic. The batch was accepted based on acceptable LCS recovery.

For report T182898f the percent recovery and/or RPD was below acceptance criteria for arsenic in batch 8092011-MS1 in the MS (QR-04). The associated post spike sample 8092011-RS1 had percent recovery above acceptance range for barium and percent recovery was not recovered for chromium. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected. The percent recovery and/or RPD was outside acceptance criteria for barium. Results accepted based upon percent recovery results in the post spike and/or serial dilution.

For report T183211f the percent recovery and/or RPD was outside acceptance criteria for arsenic and lead for the MS and MSD. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results. The spike recovery was outside acceptance limits for the MS and/or MSD

due to possible matrix interference for batch 8102322 for cadmium, chromium, and lead. This also affected the post spike for chromium and lead. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected. The percent recovery and/or RPD was outside acceptance criteria in batch 8102329 for the MS and MSD. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results. The percent recovery and/or RPD was outside acceptance criteria in batch 8102332 for the MS and MSD for 4,4'-DDT. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.

For report T183212f the percent recovery and/or RPD was outside acceptance criteria in batch 8102416-MSD1 and 8102416-MSD1 for the MS and MSD for lead. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.

For report T183454f the percent recovery and/or RPD was outside acceptance criteria in batch 8112020-MS1 and 8112020-MSD1 for the MS and MSD for lead. Results accepted based upon percent recovery results in the post spike and/or serial dilution. The percent recovery and/or RPD was outside acceptance criteria in batch 8112026 for the MS for lead. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results. The percent recovery and/or RPD was outside acceptance criteria in batch 8112013 for the MSD for aldrin. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.

For report T183494f the percent recovery and/or RPD was outside acceptance criteria for lead in the MS and MSD for batch 8112638. Results accepted based upon percent recovery results in the post spike and/or serial dilution. The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference for batch 8112638 for lead. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected. The percent recovery and/or RPD was outside acceptance criteria in batch 8112638 for the MSD for chromium. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results. The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference for batch 8113016 for mercury. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.

For report 418425, the MS and/or MSD was not within control limits due to matrix interference for antimony, barium, lead, vanadium, and zinc. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.

For report 421801 the analyte concentration for trichloroethene in the sample exceeded the spike level by a factor of four or greater, the spike recovery and limits do not apply. The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits for lead and arsenic due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.

All other percent recoveries and relative percent differences (RPDs) for matrix spikes and matrix spike duplicates were within acceptable criteria established by the laboratory for the respective testing methods.

Trip Blank Sample Analysis

No trip blank samples were collected.

Equipment Blank Sample Analysis

No equipment blank sample was collected for reports T182803f_addl, T182898f_addl, T183211f_addl, T183212f_addl, T183495, and 418425.

For report 416293 copper, thallium, vanadium, and zinc were detected above the method detection limit but below the reporting limit in the equipment blank sample at concentrations of 0.005 mg/L, 0.014 mg/L, 0.006 mg/L, and 0.011 mg/L respectively. All detected results were greater than five times the associated equipment blank sample and no results were qualified.

For report 416329 TPH-diesel and methylene chloride were detected above the method detection limit but below the reporting limit in the equipment blank sample at concentrations of 0.07 mg/L and 1.5 µg/L respectively. All detected results were greater than five times the associated equipment blank sample and no results were qualified.

For report T182726f toluene was detected in the equipment blank sample. Toluene was not detected in any of the associated samples and no results were qualified.

For report T182803f C6-C12 (GRO) and Toluene were detected in the equipment blank sample. Toluene and C6-C12 (GRO) was not detected in any of the associated samples and no results were qualified.

No target compounds were detected in the other equipment blank samples of the other reports.

Field Duplicate Analysis

The tables below show the detected concentrations of various analytes in the primary and duplicate samples, respectively, with the calculated RPD. Results are specified by the lab report header. Results are shown if they have RPDs that exceed the acceptable limit of 30%, if the RPD is zero, or if the RPD could not be calculated where either the primary or the duplicate result was ND. In that case, the RPD is reported as NC for not calculated. The analytes are not listed in the table if both the primary and duplicate sample results were ND for non-detect or if the RPD was less than 30%.

Dilution Factors

For report T183211f the reporting limit for several compounds was raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

For report T183212f the reporting limit for several compounds was raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

For report T183454f the reporting limit for several compounds was raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

All other dilution factors were within acceptable criteria established by the laboratory for the respective testing methods.

Compound Identification and Quantitation

The laboratory did not apply flags to any of the analytes for reports 412613, 416244, T182726f, T182803f, T183495f, 418214, and 418425.

The laboratory applied the following flags to report 416293:

B1 Analyte was present in a sample and associated method blank greater than MDL but less than RDL.

Results for the following samples/analytes were B1-flagged:

Sample	B1-Flagged Analytes (Report 416293)
B70B-0.5	Antimony, Molybdenum

B70A-0.5	Antimony, Molybdenum
B70B-1.5	Antimony, Thallium
B70A-1.5	Molybdenum
EB-02	Copper, Thallium

J Reported value estimated.

Results for the following samples/analytes were J-flagged:

Sample	J-Flagged Analytes (Report 416293)
B70B-0.5	Antimony, Cadmium, Molybdenum, 4,4'-DDD
B70A-0.5	Antimony, Cadmium, Molybdenum, Selenium
B70B-1.5	Antimony, Thallium
B70A-1.5	Molybdenum
EB-02	Copper, Thallium, Zinc,

D2 Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.

Results for the following samples/analytes were D2-flagged:

Sample	D2-Flagged Analytes (Report 416293)
B70B-1.5	4,4'-DDD, 4,4'-DDE, 4,4'-DDT, a-BHC, Aldrin, b-BHC, Chlordane, d-BHC, Dieldrin, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin aldehyde, Endrin Ketone, Heptachlor, Heptachlor epoxide, Lindane (Gamma-BHC), Methoxychlor, Toxaphene

The laboratory applied the following flags to report 416329:

J Reported value estimated.

Results for the following samples/analytes were J-flagged:

Sample	J-Flagged Analytes (Report 416329)
B83-0.5	4,4'-DDE

B42-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene

The laboratory applied the following flags to report T183212f:

R-07 Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

Results for the following samples/analytes were R-07-flagged:

Sample	**R-07-Flagged Analytes (Report T183212f)**
B31-0.5-DUP	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B31-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B12-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B11-1.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B11-2.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B90-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B93-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene

The laboratory applied the following flags to report T183454f:

R-07 Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

Results for the following samples/analytes were R-07-flagged:

Sample	**R-07-Flagged Analytes (Report T183454f)**
B60-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B62-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B20-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B21-0.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene
B21-1.5	Alpha-BHC, gamma-BHC (Lindane), beta-BHC, delta-BHC, Heptachlor, Aldrin, Heptachlor epoxide, gamma-Chlordane, alpha-Chlordane, Endosulfan I, 4,4'-DDE, Dieldrin, Endrin, 4,4'-DDD, Endosulfan II, 4,4'-DDT, Endrin aldehyde, Endosulfan sulfate, Methoyxchlor, Endrin ketone, Toxaphene

SV121-25.0	Benzene, Methylene chloride
SV119-10.0	Benzene, Toluene
SV119-15.0	Benzene, Toluene
SV119-25.0	2-Butanone (MEK), Benzene, Toluene
SV122-5.0	Benzene, Toluene
SV122-10.0	Benzene, Toluene
SV122-15.0	2-Butanone (MEK), Benzene, Methylene chloride, Toluene
SV122-25.0-DUP	Benzene, Methylene chloride, Toluene

Review of Data Quality Objectives (DQOs)

The project DQOs were evaluated to determine whether the quantitative and qualitative needs of the sampling and analysis program had been met. DQOs were evaluated using the qualitative data quality indicators comparability and representativeness; and using the quantitative data quality indicators precision, accuracy, completeness, and sensitivity. The data generated may not be considered fully achieved, but variances will trigger the appropriate QA/QC measures needed to evaluate and correct these activities, if necessary.

Comparability

Comparability evaluates whether the reported data are comparable with similar data reported by other organizations. The comparability of the laboratory results was found to be acceptable. The units were consistent and appropriate for the matrix sampled.

Comparability also involves comparing data to previous sampling events at the same locations. Results from the reporting period sampling event generally indicate good comparability with previous sampling events.

Representativeness

Representativeness is the reliability with which a measurement or measurement system reflects the true conditions under investigation (U.S. EPA 2008). Representativeness is influenced by the number and location of the sampling points, sampling timing and frequency of monitoring efforts, and the field and laboratory sampling procedures.

The representativeness of data was enhanced by the use of established field and laboratory procedures and their consistent application. Samples that were collected are considered to be representative of the location of sample collection.

Precision

Precision measures the reproducibility of repetitive measurements by assessing the RPD between field samples and field duplicate analyses, MS/MSD analyses, and field sample and laboratory duplicate analyses.

Accuracy

Accuracy is a statistical measurement of correctness and includes components of random error and systemic error.

Completeness

The completeness of the data is described as a ratio of the amount of data expected from the field program versus the amount of valid data actually received. Valid data are considered to be those data that have not been rejected (were not R-qualified) either from data validation or internal data review. Completeness can be expressed as the percentage of valid results relative to the total number of requested results.

Based on the data validation report, none of the results were rejected in the reporting period sampling event. The completeness of the sample sets submitted for analysis is 100 percent.

Sensitivity

Sensitivity is evaluated by determining if reporting limits are below applicable screening levels.

Overall Assessment

The data validation memo for Alexander Hamilton High School (September to December 2018, February 2019 to November 2019) had some quality control outliers.

Quality control results discussed issues in the method blank analysis, laboratory control samples, surrogate compound recovery, blank spike/black spike duplicate analyses, and matrix spike/matrix spike duplicate analyses. The Quality control outliers in the laboratory QA/QC samples did not qualify any sample data. A field duplicate sample was collected at a frequency of approximately 10%. The field duplicate sample analyses in the Alexander Hamilton High School reports had detected concentrations of various analytes in the primary and duplicate samples where the calculated RPD exceeded the acceptable limit of 30%.

For report 416329 sample EB-03 (lab # 416329-071) was extracted/analyzed past the holding time for TPH-diesel and TPH-motor oil.

The Compound Quantitation section of the data validation memo summarizes the following laboratory applied flags:

- B1 Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
- J Reported value estimated.
- D2 Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
- L The LCS or LCSD was out of control limits. Associated sample data was reported with qualifier.
- T Sample was extracted/analyzed past the holding time.
- R-07 Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

For reports T183211f, T183212f, and T183454f the reporting limit for several compounds was raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

No trip blank samples were collected during these sampling events.

All soil and water data, as qualified, are acceptable for use.

SOIL VAPOR DATA VALIDATION

Review of Laboratory Reports

The data were reviewed in accordance with the National Functional Guidelines for Superfund Organic Methods Data Review, (January 2017; (USEPA-540-R-2017-002), with the National Functional Guidelines for Superfund Inorganic Methods Data Review, (January 2017; (USEPA-540-R-2017-001), Department of Toxic Substances Control, the Los Angeles Regional Water Quality Control Board, and the San Francisco Regional Water Quality Control Board Advisory – Active Soil Gas Investigations (July 2015), the pertinent

methods referenced by the data package, and professional and technical judgment. Data verification and validation were performed in performed in general conformance with the Stage 2 validation described in the Guidance for Labelling Externally Validated Laboratory Analytical Data for Superfund Use (USEPA 2009).

For report ST-13880 and ST-14158, soil gas samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCV) and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verification Duplicate (CCVD) was analyzed with each batch of soil gas samples.

For report ST-13007, indoor air samples were analyzed using EPA Method TO-15. Instrument CCV, QC Reference Standards, and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a MS and MSD were analyzed with each batch of Indoor Air Samples.

For report ST-12676 and ST-12616, soil gas samples were analyzed using EPA Method TO-15. Instrument CCV and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a CCVD was analyzed with each batch of soil gas samples.

For report ST-12571, Soil Gas samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCVD) and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verification Duplicate (CCVD) was analyzed with each batch of Soil Gas samples.

For report F-0180, F-0173, F-0170, D-1648, and D-1552 Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). CCV, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. All samples were injected into the GC/MS system within 30 minutes of sampling.

Data Package Completeness

The data packages included the required elements of a chain-of-custody, case narrative, results, and QC results. A sample receipt and case narrative were not provided with the analytical laboratory reports. The laboratory project managers were contacted directly, and confirmed that all samples were received intact, in the correct containers, appropriately labeled and preserved.

Verification of Electronic Data Deliverable to Hardcopy Data Package

Sample results and related quality control data were received in both an electronic and hardcopy format.

Chain of Custody

All sample identification (ID) numbers listed on the chain-of-custody record are consistent with the sample ID reported in the laboratory electronic data deliverable (EDD) and hardcopy data package.

Sample Preservation

Soil vapor samples were received with laboratory vacuums ranging from -4.0 to -1.0 inches of mercury ("Hg"). Samples SV04D, SV111-5.0, SV60-15.0, SV59-15' were received by the laboratory with a vacuum

difference of greater than one inch of mercury. A field pressure was not recorded for sample B64-29', therefore vacuum difference could not be calculated. The other samples mentioned above were received by the laboratory with a vacuum difference of less than one inch of mercury. Proper preservation includes samples are received by the laboratory with a vacuum pressure and less than 1" Hg differential between the field vacuum reading and the laboratory received vacuum reading.

For the mobile lab (D- and F-) jobs, summa canisters were not used, so there is not a recorded vacuum pressure reading. The soil gas is pulled from the probe using a glass syringe, and then injected directly into the instrument. This includes lab reports F-0170, F-0180, F-0170, F-0173, D-1552, D-1648.

The table below shows the samples received by the laboratory with a vacuum reading in inches of mercury (Hg) along with the corresponding field vacuum readings:

Client Sample ID	Jones ST Number	SUMA ID	Received Pressure ("Hg)	Field Pressure ("Hg)
SV04D-15.5	ST-13880-01	NA	-2.5	-4
SV111-5.0	ST-13880-02	NA	-1	-4
SV60-15.0	ST-13007-01	NA	-3	-5
B64-29'	ST-12676-01	NA	-2	--
SV53-5.0'	ST-12616-01	NA	-4	-5
SV59-15.0'	ST-12571-01	NA	-2	-5
SV113-5.0	ST-14158-01	O1201	-4	-4
SV113-15.0	ST-14158-02	O1184	-3	-3
SV114-5.0	ST-14158-03	B2417	-4	-4
SV114-15.0	ST-14158-04	O1180	-2	-2
SV115-5.0	ST-14158-05	B2438	-3	-3
SV115-15.0	ST-14158-06	1513B	-3	-3
SV116-5.0	ST-14158-07	1489	-2	-2
SV116-15.0	ST-14158-08	O1156	-3	-3
SV116-15.0-REP	ST-14158-09	O1220	-4	-4

Notes:

-- = Not measured
NA = Not available

Holding Times

Samples were analyzed within the proper holding times.

Method Blank Analysis

In report TP112619-11 methylene chloride (dichloromethane) was detected above the laboratory reporting limit. Associated sample detections for methylene chloride (dichloromethane) were qualified by the laboratory with a B flag.

No target compounds were detected in the method blank samples.

Laboratory Control Samples

Laboratory control sample analysis was performed per batch of 20 or fewer samples. All the percent recovery values for laboratory control samples (LCS) were within acceptable criteria established by the laboratory for the respective testing methods.

For report TP112619-11 the LCS and/or LCSD recoveries fell above the established control specifications for dichlorodifluoromethane (F12). Dichlorodifluoromethane (F12) was not detected in any of the samples, therefore, no results were qualified.

Laboratory control sample (LCS) analysis was not performed for report ST-13880, ST-13007, ST-12676, ST-12616, ST-12571, and ST-14158. Precision was evaluated using the method blank.

Surrogate Compound Recovery

All percent recovery values for surrogate compounds were within acceptable criteria established by the laboratory for the respective testing methods.

Sample Duplicate Analysis

Sample duplicate analysis was not performed for reports ST-13880 or ST-14158.

Laboratory sample duplicate analysis was performed per batch of 20 or fewer samples. For all the detected compounds, calculated RPDs were within the accepted 25% limit established by the laboratory.

Blank Spike/Blank Spike Duplicate Analyses

Blank spike/blank spike duplicate analysis is not performed for air sampling.

Matrix Spike/Matrix Spike Duplicate Analyses

Matrix spike and matrix spike duplicate sample analyses are not performed for air sampling.

Trip Blank Sample Analysis

Trip blanks are not collected for soil gas/indoor air samples.

Equipment Blank Sample Analysis

Equipment blanks are not collected for soil gas/indoor air samples.

Field Replicate Analysis

The tables below show the detected concentrations of various analytes in the primary and duplicate samples, respectively, with the calculated RPD. Results in bold have RPD's that exceed the acceptable limit of 30%. Results are specified by the lab report header. The analytes are not listed in the table if both the primary and duplicate sample results were ND for non-detect. RPD could not be calculated where either the primary or the duplicate result was ND and RPD is reported as NC for not calculated.

Dilution Factors

Report ST-13007 had dilution factor of 1/10 for propylene but was within acceptable criteria. All other dilution factors were within acceptable criteria established by the laboratory for the respective testing methods.

Compound Identification and Quantitation

The laboratory applied the following flags to report TP112619-11:

B Analyte is found in the associated blank as well as in the sample.

Results for the following samples/analytes were B-flagged:

Sample	B-Flagged Analytes (Report TP112619-11)
SV117-25.0	Methylene chloride (dichloromethane)
SV117-15.0	Methylene chloride (dichloromethane)
SV118-25.0	Methylene chloride (dichloromethane)
SV118-25.0-Rep	Methylene chloride (dichloromethane)
SV118-15.0	Methylene chloride (dichloromethane)
SV118-10.0	Methylene chloride (dichloromethane)
SV119-25.0	Methylene chloride (dichloromethane)
SV119-15.0	Methylene chloride (dichloromethane)
SV119-10.0	Methylene chloride (dichloromethane)
SV120-25.0	Methylene chloride (dichloromethane)
SV120-15.0	Methylene chloride (dichloromethane)
SV120-10.0	Methylene chloride (dichloromethane)
SV121-25.0	Methylene chloride (dichloromethane)
SV121-15.0	Methylene chloride (dichloromethane)
SV121-10.0	Methylene chloride (dichloromethane)
SV122-25.0	Methylene chloride (dichloromethane)
SV122-15.0	Methylene chloride (dichloromethane)
SV122-10.0	Methylene chloride (dichloromethane)
SV117-5.0	Methylene chloride (dichloromethane)
SV117-10.0	Methylene chloride (dichloromethane)

The laboratory applied no flags to any of the other analytes for the other reports.

Review of Data Quality Objectives (DQOs)

The project DQOs were evaluated to determine whether the quantitative and qualitative needs of the sampling and analysis program had been met. DQOs were evaluated using the qualitative data quality indicators comparability and representativeness; and using the quantitative data quality indicators precision, accuracy, completeness, and sensitivity. The data generated may not be considered fully achieved, but variances will trigger the appropriate QA/QC measures needed to evaluate and correct these activities, if necessary.

Comparability

Comparability expresses the confidence with which one data set can be compared to another.

Representativeness

Representativeness is the degree to which data accurately and precisely represent the actual site conditions.

Precision

Precision measures the reproducibility of repetitive measurements by assessing the RPD between field samples and field duplicate analyses, MS/MSD analyses, and field sample and laboratory duplicate analyses.

Accuracy

Accuracy is a statistical measurement of correctness and includes components of random error and systemic error.

Completeness

Completeness is the amount of valid data obtained compared to the amount expected under ideal conditions.

Sensitivity

Sensitivity is evaluated by determining if reporting limits are below applicable screening levels.

Overall Assessment

All soil vapor data, as qualified, are acceptable for use.

Subject: Site-Specific Arsenic Assessment for LAUSD Alexander Hamilton High School

---

We have reviewed the arsenic soil sampling results with consideration for the methodologies presented in CalEPA DTSC's January 2009 Arsenic Strategies Determination of Arsenic Remediation, Development of Arsenic Cleanup Goals. Our review would suggest that a site cleanup goal of 28 mg/kg could be proposed for the Site. The following is a brief overview of the analysis performed and the associated results which support this proposed cleanup goal for arsenic. This included performing both a simple graphical determination as well as a statistical determination. The graphical determination resulted in an estimated cleanup goal for arsenic of 25 mg/kg. The statistical determination resulted in an estimated cleanup goal for arsenic of 28 mg/kg. Since both methodologies are supported by this guidance, we would recommend proposing the use of the higher of these two results = 28 mg/kg.

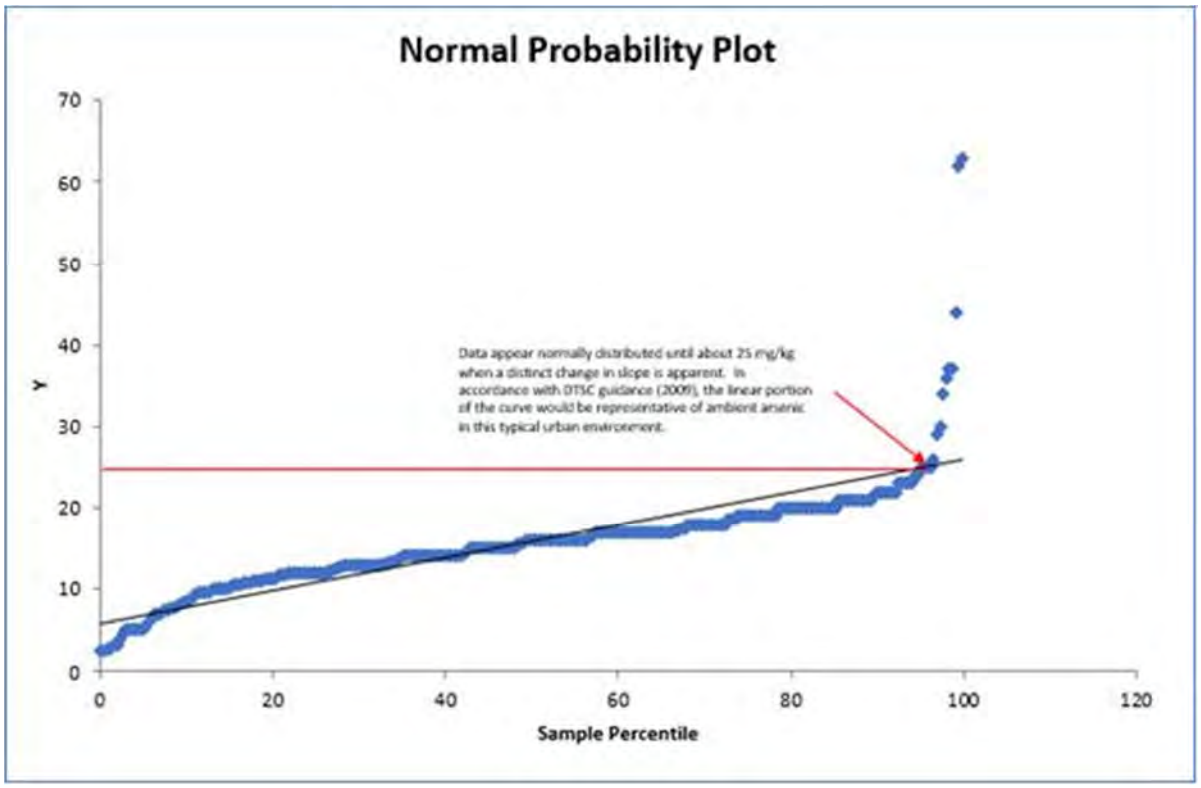
We did review the sensitivity of these outcomes when considering (1) all of the arsenic data and (2) only data representative of fine soil - the results were similar in both cases.

Simple Graphical Determination

1. Calculated basic statistics for the arsenic data.

Statistic	Value	Units
Number of Samples	274	--
Min Conc	3	mg/kg
Max Conc	63	mg/kg
Mean Conc	16	mg/kg
Median Conc	16	mg/kg
Standard Deviation	7.1	--

2. Produced a normality plot of the raw arsenic data



3. In accordance with the DTSC guidance, 25 mg/kg would represent the upper-bound of ambient arsenic in soil at the Site and could serve as the clean-up goal.

Statistical Determination

4. Identified statistically significant outliers in the data set. Overall, out of the 274 results, 8 were identified as statistically significant outliers. These samples exhibited concentrations ranging from 30 to 63 mg/kg.

5. After removing these outliers, the data set was tested to determine if the underlying distribution (without outliers) was normally distributed. The results confirmed that the distribution was normally distributed.

6. Calculated the 95% upper confidence limit (UCL) on the 99th percentile for this data set = 28 mg/kg. In accordance with the DTSC guidance, 28 mg/kg would represent the upper-bound of the ambient arsenic in soil at the Site and could serve as the clean-up goal.

H.1 INTRODUCTION

Terraphase Engineering Inc. (Terraphase) performed a human health screening risk evaluation, in accordance with the California Environmental Protection Agency Department of Toxic Substances Control's (DTSC) October 2015 *Preliminary Endangerment Assessment Guidance Manual*, to help support a Preliminary Endangerment Assessment - Equivalent (PEA-E) for the Alexander Hamilton High School located at 2955 South Robertson Boulevard in Los Angeles, California (the Site). The screening evaluation involved the comparison of chemical concentrations in soil and soil gas, observed in samples collected from the Site during the field activities performed in 2018 through 2019, to conservative risk-based screening levels. Additionally, conservative estimates of the site-related cumulative cancer and noncancer risk for exposure of receptors to chemicals of potential concern (COPC) in soil and soil gas were calculated.

This appendix presents the methodology and results of the screening risk evaluation.

H.2 SCENARIOS FOR POTENTIAL HUMAN EXPOSURE

This section provides a brief overview of the applicable scenarios for potential human exposure to site-related COPCs. Section H.2.1 discusses the identification of COPCs. Section H.2.2 discusses the potentially exposed populations, while Section H.2.3 discusses the relevant exposure pathways for each of the identified receptors. Overall, two specific exposure scenarios have been evaluated in this screening risk evaluation – soil direct contact and vapor intrusion.

Direct contact with soil is assumed to involve incidental ingestion of, and dermal contact with soil and inhalation of soil-derived particulates and vapors. In this screening risk evaluation, this exposure scenario has been evaluated using conservative generic risk-based screening levels that are based upon residential[1] soil direct contact exposure, in accordance with DTSC guidance (2015).

Vapor intrusion involves the potential migration of volatile chemicals in soil and/or groundwater through the foundations and buildings and into indoor air. In this screening risk evaluation, this exposure scenario has been evaluated using conservative generic risk-based screening levels that are based upon residential vapor intrusion exposure, in accordance with DTSC guidance (2015).

H.2.1 Chemicals of Potential Concern

In order to streamline the screening risk evaluation, any chemical detected in soil and soil gas at the Site were conservatively selected as a COPC, regardless of whether that chemical exceeded screening levels. Based upon the available site characterization data, metals[2], pesticides and volatile organic chemicals (VOCs) were detected in soil and soil gas at the Site, summarized in Table H-1.

As further described in Section H.3.2, soil sampling locations with arsenic and lead concentrations above the arsenic cleanup goal or lead screening level will be remediated (e.g., excavated and replaced with clean soil). Therefore, while arsenic and lead are considered COPCs, because it is expected that remedial action will be performed to address soil concentrations for these COPCs above these conservative levels, arsenic and lead are not included in the quantitative risk calculations. As such, the soil risk calculation results presented in this evaluation can be considered representative of “post-remedy” conditions.

H.2.2 Current and Future Land Use and Potentially Exposed Populations

As discussed in Section 1.1 of the PEA Report, the Site is approximately 20.8 acres in size and is developed with the Alexander Hamilton High School campus. The Site is owned and operated by the Los Angeles Unified School District (LAUSD). Buildings at the Site include four classroom buildings, portable classrooms, photography building, arts building, storage structures, two gymnasiums, cafeteria, and assembly hall. Other developments on the Site include an outdoor track and football field, parking

[1] While on-site residential land use is not a current or reasonably expected land use, generic risk-based screening levels are used as a conservative surrogate to the receptor populations that would be expected to be present at the school (i.e., educators, school staff, students, maintenance workers, and trespassers).

[2] For this evaluation, chromium (total) concentrations were assumed to be trivalent chromium (Cr III) and not hexavalent chromium (Cr VI) given the lack of a source that would have resulted in the presence of Cr VI at this Site.

structure with elevated tennis courts, baseball field and paved parking areas. The northwest portion of the Site is developed with Cheviot Hills Continuing School.

The Site is bounded by residential areas to the north, west and south, and mixed use (residential and commercial) to the east.

Under current and reasonably expected future land use, potentially exposed populations at and around the Site include high school students, adult educators and staff employed by the school, maintenance workers, construction workers, trespassers and off-site residents.

H.2.3 Exposure Pathways

H.2.3.1 On-Site

High School Students

High school students would be present on-site while attending school.

During their time outdoors, students could be exposed to soil in unpaved or uncovered areas. Potential routes of exposure to surface soil would include incidental ingestion, dermal contact, and inhalation of soil vapor and airborne particulates. While outside, students could also be exposed via inhalation of chemicals from subsurface soil or shallow groundwater, where present, if VOCs were to volatilize and migrate to the outdoor air.

During their time indoors, students could be exposed via the inhalation of volatile chemicals from subsurface soil or shallow groundwater, where present, if these chemicals were to volatilize and migrate through cracks in building foundations into indoor air.

Adult Educators and School Staff

As with the students, while outside adult educators and school staff could be exposed to soil in unpaved or uncovered areas. Potential routes of exposure to surface soil would include incidental ingestion, dermal contact, and inhalation of soil vapor and airborne particulates. While outside, staff could also be exposed via inhalation of chemicals from subsurface soil or shallow groundwater, where present, if VOCs were to volatilize and migrate to the outdoor air.

During their time indoors, adult educators and school staff could also be exposed via the inhalation of volatile chemicals from subsurface soil or shallow groundwater, where present, if these chemicals were to volatilize and migrate through cracks in building foundations into indoor air.

Maintenance Workers

Workers who perform occasional maintenance activities (e.g., landscaping, repair of underground utilities, etc.) of limited size and duration at the Site could be exposed to COPCs in soil. Potential routes of exposure to surface and subsurface soil during such activities would include incidental ingestion, dermal contact, and inhalation of soil vapor and airborne particulates.

Construction Workers

In the future, should portions of the Site be subject to construction or redevelopment, construction workers could be exposed to COPCs in soil. Potential routes of exposure to surface and subsurface soil during such activities would include incidental ingestion, dermal contact, and inhalation of soil vapor and airborne particulates.

Trespassers

While trespasser exposures at the Site are generally expected to be limited in duration and extent, trespassers could be exposed to soil in unpaved or uncovered areas of the Site. Potential routes of exposure to surface soil would include incidental ingestion, dermal contact, and inhalation of soil vapor and airborne particulates. Trespassers could also be exposed via inhalation of chemicals from subsurface soil or shallow groundwater, if VOCs were to volatilize and migrate to the outdoor air.

H.2.3.2 Off-Site

Residents

Off-site residents could be exposed to COPCs in soil and soil gas via inhalation of chemicals in vapor and/or particulates emitted from on-site soil at uncovered areas of the Site, if these emissions were to migrate in the direction of off-site residences. In the paved or covered areas, exposure to COPCs via inhalation would be significantly reduced since the pavement will prevent significant emissions.

H.3 HUMAN HEALTH SCREENING EVALUATION

This section presents the results of the human health screening evaluation. Section H.3.1 discusses the exposure pathways and media of concern. Section H.3.2 discusses the COPC and exposure concentrations. Section H.3.3 discusses the risk-based screening levels used in this evaluation. Section H.3.4 provides the preliminary screening results. Section H.3.5 provides the results of the risk characterization, and Section H.3.6 discusses the evaluation of lead concentrations in soil.

H.3.1 Exposure Pathways and Media of Concern

Section H.2 provides a summary of the possible human receptors that would have the potential for exposure to COPC in soil and soil gas at the Site under current or reasonably anticipated future land use. As noted above, while several potential receptors are discussed, in order to evaluate potential soil direct contact exposures, this screening evaluation utilizes conservative generic risk-based screening levels that are based upon residential direct contact exposure to COPCs in soil (i.e., incidental ingestion, dermal contact, and inhalation of particulates and vapors) and vapor intrusion exposure (i.e., indoor inhalation exposure) to soil gas concentrations. The results of these evaluations should be considered as conservative surrogates for the other potential receptor populations detailed in Section H.2.2.

H.3.2 Chemicals of Potential Concern and Exposure Concentrations

To streamline the risk assessment, exposure concentrations for soil and soil gas were conservatively assumed to be equal to the maximum detected concentrations at each a location, regardless of sampling depth.

Per LAUSD's plans for the Site, soil sampling locations exhibiting arsenic concentrations above 28 mg/kg[3] or lead concentrations above 80 mg/kg[4] will be subject to remedial action. In conducting the quantitative risk calculations, locations with arsenic or lead concentrations exceeding these values were assumed to be remediated (e.g., excavated and replaced with clean soil). The locations where soil remedial action is assumed are shown in Figures H-1 and H-2.

As discussed in Section H.2.1, Table H-1 provides a list of the COPC.

H.3.3 Generic Risk-Based Screening Levels

In evaluating soil direct contact exposures, generic risk-based screening levels were used that are based upon DTSC's (2020) HHRA Note 3, Modified Screening Levels for Residential Soil. For any COPC not included in this source, the risk-based screening levels were based upon USEPA's Regional Screening

[3] Terraphase. 2019. Preliminary Endangerment Assessment – Equivalent, Appendix G: Site-Specific Arsenic Assessment for LAUSD Alexander Hamilton High School. March.
[4] DTSC. 2020. Human Health Risk Assessment (HHRA) Note Number: 3, DTSC-Modified Screening Levels for Residential Soil. April.

Levels for Residential Soil (at a target cancer risk level of $1x10^{-6}$ and noncancer hazard quotient (HQ) of 1)[5].

In evaluating vapor intrusion exposures, generic risk-based screening levels used for soil gas in this evaluation were based upon DTSC's (2020) HHRA Note 3, Modified Screening Levels for Residential Air, conservatively attenuated by a generic default factor of 0.002. The attenuation factor conservatively reflects the amount of attenuation in concentration from subslab soil gas to indoor air due to vapor intrusion. For any COPC not included in this source, the risk-based screening levels used were based upon USEPA's Regional Screening Levels for Residential Air (at a target cancer risk level of $1x10^{-6}$ and noncancer hazard quotient (HQ) of 1), also conservatively attenuated by a factor of 0.002.

H.3.4 Preliminary Screening Results

As presented on Table H-2, none of the COPCs in soil exhibited concentrations above conservative generic risk-based screening levels.

As presented on Table H-3, concentrations of COPCs in soil gas at 8 locations were greater than the generic residential risk-based soil gas screening levels. This included benzene (i.e., at locations B55, B56, B110, B112, B117, B121), 1,2-dichloroethane (12DCA) (i.e., at location B62), ethyl benzene (i.e., at locations B55, B117), naphthalene (i.e., at locations B56) and tetrachloroethene (PCE) (i.e., at location B04). All other COPCs in soil gas exhibited concentrations below these conservative residential generic risk-based screening levels.

H.3.5 Risk Characterization

As presented in Tables H-2 and H-3, upper-bound estimates of single-chemical cancer risks and noncancer hazard quotients (HQ) for receptors were conservatively calculated by scaling the maximum detected soil and soil gas concentrations, respectively, at each location by the cancer and noncancer-based screening levels. These single-chemical cancer risks and noncancer HQs for soil and soil gas were then added to estimate the upper-bound cumulative cancer risk and noncancer HI at each location.

Table H-4 presents the upper-bound cumulative cancer risk and noncancer HI estimates for each of the soil sampling locations. As shown, none of the locations exhibited concentrations that would result in cumulative risk or HI estimates that would be greater than the risk management goals used by DTSC to determine when risk management action is warranted (DTSC 2015) (i.e., specifically, a cumulative cancer risk less than or equal to $1x10^{-6}$ and noncancer HI less than or equal to 1). Figure H-3 presents the locations of each soil sampling point.

Table H-5 presents the upper-bound cumulative cancer risk and noncancer HI estimates for vapor intrusion exposure to COPC concentrations at each of the soil gas sampling locations. Figure H-4 presents the locations of each soil gas sampling point and identifies those with risk or HI estimates in

[5] The USEPA RSL for thallium was not used since it is based upon a Provisional Peer-Reviewed Toxicity Value (PPRTV) Appendix (Screening Value) toxicity value. USEPA says that these toxicity values are "*not defensible as the primary drivers in making cleanup decisions because they are based on limited information*" (USEPA 2009, 2012). As noted in USEPA's (2010) Provisional Peer-Reviewed Toxicity Values for Thallium Compounds, "*it is inappropriate to derive a subchronic or chronic p-RfD*" because of inadequate information and studies that are of poor quality (USEPA 2012).

excess of the risk management goals. As shown on Table H-5 and Figure H-4, 8 locations (i.e., B04, B55, B56, B62, B110, B115, B117, and B121) exhibited cumulative cancer risk estimates above the risk management goal of $1x10^{-6}$. Noncancer HI estimates at all of the soil gas sampling locations were less than or equal to the risk management goal of 1. As shown on Table H-3, these potentially unacceptable cumulative cancer risk estimates were predominately driven by detected concentrations of benzene, bromodichloromethane, dibromochloromethane, 12DCA, ethyl benzene, naphthalene and PCE. Based upon this conservative modeling, further consideration for vapor intrusion risk management action at these locations would be warranted.

H.3.6 Lead

As discussed in Section H.3.2, the soil sampling locations with lead concentrations above the generic risk-based screening level of 80 mg/kg will be removed and replaced with clean soil, per LAUSD's plans for the Site. Therefore, receptor exposure to lead in soil at the Site would not result in unacceptable exposure following this action.

H.4 RISK MANAGEMENT

As presented in Section H.3, there are no locations exhibiting COPC concentrations that would result in unacceptable cumulative cancer risks or noncancer HIs for receptors exposed to soil via direct contact. Based upon these conservative estimates, with the exception of the planned remedial action to address arsenic and lead concentrations in soil at select locations, additional risk management action would not be warranted to address soil direct contact exposures at the Site.

Also, as presented in Section H.3, conservative estimates of cumulative cancer risk and noncancer HI for receptors exposed to soil gas via vapor intrusion at 8 sampling locations were greater than DTSC's recommended risk management goals for determining the need for risk management action. Further consideration for remedial action at these locations would be warranted. This may include (1) additional sampling and/or further assessment to refine the conservative quantitative risk estimates presented in this evaluation, or (2) remedial action to reduce COPC concentrations in these areas or to eliminate/mitigate vapor intrusion exposure to receptors.

H.5 SUMMARY AND CONCLUSIONS

Terraphase performed a conservative human health screening risk evaluation, in accordance with the Department of Toxic Substances Control's (DTSC) October 2015 PEA Guidance Manual, to help support a PEA-E for the Site.

The screening evaluation involved the comparison of soil and soil gas concentrations to conservative risk-based screening levels and calculating conservative estimates of the cumulative cancer and noncancer risk for exposure of receptors to COPC.

As presented in Section H.3, following the planned implementation of soil remedial action at select locations to address potential direct contact exposures to areas with elevated arsenic and lead concentrations, conservative estimates of cumulative cancer risk and noncancer HI due to direct contact exposure to COPCs in soil were equal to or below DTSC's risk management goals. As such, additional risk management action to address potential direct contact exposures to soil at the Site would not be warranted.

Cumulative cancer risk estimates due to vapor intrusion exposure at 8 locations were greater than DTSC's recommended risk management goals, and as discussed in Section H.4, additional assessment and/or remedial action at these locations would be warranted.

Notes:
Only chemicals detected at each location are shown.
Exposure concentrations conservatively calculated using the maximum detected soil concentrations observed at each location, regardless of depth.
Arsenic cleanup goal described and calculated in Terraphase (2019), Appendix G.
The screening levels for soil are the lower of the screening levels at either the target cancer risk of 1E-6 or target hazard quotient of 1
The screening levels for Chromium (total) are the screening levels provided by the agency for Chromium III, unless otherwise noted
The USEPA RSL for thallium was not used since it is based upon a Provisional Peer-Reviewed Toxicity Value (PPRTV) Appendix (Screening Value) toxicity value
Ratios of concentration to the screening level greater than 1 are shaded in bold.
Chemical-specific risks are scaled off of the cancer-based residential soil screening levels. Chemical-specific risks above $1x1C^{7}$ are shaded in bold.
Chemical-specific risks are scaled off of the noncancer-based residential soil screening levels. Chemical-specific HQs above 0.1 are shaded in bold
The concentrations for the Chlordane isomers (alpha and gamma) were summed to Chlordane (total).
The concentrations for the Xylene isomers (m/p and o) were summed to Xylenes (total).
Chem Group - chemical group
Carc Class - USEPA Weight-of-Evidence Cancer Classification

Notes:
Only chemicals detected at each location are shown.
Exposure concentrations conservatively calculated using the maximum detected soil gas concentrations observed at each location, regardless of depth.
The screening levels for soil are the lower of the screening levels at either the target cancer risk of 1E-6 or target hazard quotient of 1.
Ratios of concentration to the screening level greater than 1 are shaded in bold.
Chemical-specific risks are scaled off of the cancer-based indoor air screening levels, attenuated by the attenuation factor 0.002. Chemical-specific risks above $1x10^{-7}$ are shaded in bold.
Chemical-specific risks are scaled off of the noncancer-based soil screening levels, attenuated by the attenuation factor 0.002. Chemical-specific HQs above 0.1 are shaded in bold.
The concentrations for the Xylene isomers (m/p and o) were summed to Xylenes (total).
Chem Group - chemical group
Carc Class - USEPA Weight-of-Evidence Cancer Classification
