-External Email-

Hi Dennis
Patty is the project manager for a job that we conducted at the Reseda High School. I had a question regarding the analysis of dioxin and furans for lab report J198799. We requested a primary sample and dup to be analyzed but it was not reported.
I also submitted number of samples to be held. I would like to run some of those samples as outlined below. Do you need me to amend the original COC to request the analysis or submit a new COC? Or will this email suffice? (Lab ID numbers for the samples are J198798, J198799, J198876, J199093). Please let me know if you need further clarification.
Thanks

Justin King

Subject: Reseda

Hi Patty
I did not see the results of the dioxin and furan testing for AOC3-B1. Were you going to report that separately?
Also, I will need the follow held samples analyzed.

- AOC1-B1-D1.5 and AOC1-B1-D2.5 for Arsenic.
- AOC1-B6-D1.5 and AOC1-B6-D2.5 for Lead
- AOC1-B8-D1.5 and AOC1-B8-D2.5 for Arsenic
- AOC1-B10-D1.5 and AOC1-B10-D2.5 for Arsenic
- AOC1-B22-D1.5 and AOC1-B22-D2.5 for Arsenic
- AOC1-B34-D1.5 and AOC1-B34-D2.5 for Lead
- AOC1-B58-D1.5 and AOC1-B58-D2.5 for Arsenic
- AOC1-B64-D1.5 and AOC1-B64-D2.5 for Arsenic
- AOC1-B77-D1.5 and AOC1-B77-D2.5 for Arsenic
- AOC1-B78-D1.5 and AOC1-B78-D2.5 for Arsenic

- AOC1-B81-D1.5 and AOC1-B81-D2.5 for Arsenic
- AOC1-B91-D1.5 and AOC1-B91-D2.5 for Arsenic
- AOC-B100-D1.5 and AOC1-B100-D2.5 for Lead
- AOC1-B108-D1.5 and AOC1-B109-D2.5 for Arsenic and Lead
- AOC1-B112-D1.5 and AOC1-B112-D2.5 for Arsenic

Please let me know if I need to amend the individual COCs to include the analysis request or send you a new COC.
Thanks
Justin

Comments
Only the additional total Lead or Arsenic results, and the STLC Lead results are included in this report, per client's 1/3/18 email request.

Receipt
The samples were received on 12/20/2017 6:25 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.0º C and 2.7º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-198876-2

Laboratory: TestAmerica Irvine

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	EPA Region	Identification Number	Expiration Date
Alaska	State Program	10	CA01531	06-30-18
Arizona	State Program	9	AZ0671	10-14-18
California	LA Cty Sanitation Districts	9	10256	06-30-18
California	State Program	9	CA ELAP 2706	06-30-18
Guam	State Program	9	Cert. No. 17-003R	01-23-18 *
Hawaii	State Program	9	N/A	01-29-18 *
Kansas	NELAP	7	E-10420	07-31-18
Nevada	State Program	9	CA015312018-1	07-31-18
New Mexico	State Program	6	N/A	01-29-18 *
Northern Mariana Islands	State Program	9	MP0002	01-29-17 *
Oregon	NELAP	10	4028	01-29-18 *
USDA	Federal		P330-15-00184	07-08-18
Washington	State Program	10	C900	09-03-18

* Accreditation/Certification renewal pending - accreditation/certification considered valid.

Dennis
Can you have Pb run for STLC for the following soil samples?
AOC1-B6-D0.5
AOC1-B34-D0.5
AOC1-B108-D0.5
AOC1-B100-D0.5
Thanks,
Justin

Good morning Justin,

AOC3-B1, primary and dup, are going to be reported separately as job J198799-2.

I will go ahead and make the changes you have outlined in the email below; this email should be sufficient enough.

DENNIS TRAN

-External Email-

Hi Dennis
Patty is the project manager for a job that we conducted at the Reseda High School. I had a question regarding the analysis of dioxin and furans for lab report J198799. We requested a primary sample and dup to be analyzed but it was not reported.
I also submitted number of samples to be held. I would like to run some of those samples as outlined below. Do you need me to amend the original COC to request the analysis or submit a new COC? Or will this email suffice? (Lab ID numbers for the samples are J198798, J198799, J198876, J199093). Please let me know if you need further clarification.
Thanks

Justin King

Hi Patty
I did not see the results of the dioxin and furan testing for AOC3-B1. Were you going to report that separately?
Also, I will need the follow held samples analyzed.

- AOC1-B1-D1.5 and AOC1-B1-D2.5 for Arsenic.
- AOC1-B6-D1.5 and AOC1-B6-D2.5 for Lead
- AOC1-B8-D1.5 and AOC1-B8-D2.5 for Arsenic
- AOC1-B10-D1.5 and AOC1-B10-D2.5 for Arsenic
- AOC1-B22-D1.5 and AOC1-B22-D2.5 for Arsenic
- AOC1-B34-D1.5 and AOC1-B34-D2.5 for Lead
- AOC1-B58-D1.5 and AOC1-B58-D2.5 for Arsenic
- AOC1-B64-D1.5 and AOC1-B64-D2.5 for Arsenic
- AOC1-B77-D1.5 and AOC1-B77-D2.5 for Arsenic
- AOC1-B78-D1.5 and AOC1-B78-D2.5 for Arsenic

- AOC1-B81-D1.5 and AOC1-B81-D2.5 for Arsenic
- AOC1-B91-D1.5 and AOC1-B91-D2.5 for Arsenic
- AOC-B100-D1.5 and AOC1-B100-D2.5 for Lead
- AOC1-B108-D1.5 and AOC1-B109-D2.5 for Arsenic and Lead
- AOC1-B112-D1.5 and AOC1-B112-D2.5 for Arsenic

Please let me know if I need to amend the individual COCs to include the analysis request or send you a new COC.
Thanks
Justin

Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	No sample date on page 7of10 of COC, logged in per container labels.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	False	No date page 7 of 10 of COC, logged in per container labels.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
440-198876-3

Comments
No additional comments.

Receipt
The samples were received on 12/20/2017 6:25 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.0º C and 2.7º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-198876-3

Client Sample ID: AOC1-B1-D1.5 — Lab Sample ID: 440-198876-70

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation

-External Email-

Hi Dennis
Patty is the project manager for a job that we conducted at the Reseda High School. I had a question regarding the analysis of dioxin and furans for lab report J198799. We requested a primary sample and dup to be analyzed but it was not reported.
I also submitted number of samples to be held. I would like to run some of those samples as outlined below. Do you need me to amend the original COC to request the analysis or submit a new COC? Or will this email suffice? (Lab ID numbers for the samples are J198798, J198799, J198876, J199093). Please let me know if you need further clarification.
Thanks

Justin King

Subject: Reseda

Hi Patty
I did not see the results of the dioxin and furan testing for AOC3-B1. Were you going to report that separately?
Also, I will need the follow held samples analyzed.

- AOC1-B1-D1.5 and AOC1-B1-D2.5 for Arsenic.
- AOC1-B6-D1.5 and AOC1-B6-D2.5 for Lead
- AOC1-B8-D1.5 and AOC1-B8-D2.5 for Arsenic
- AOC1-B10-D1.5 and AOC1-B10-D2.5 for Arsenic
- AOC1-B22-D1.5 and AOC1-B22-D2.5 for Arsenic
- AOC1-B34-D1.5 and AOC1-B34-D2.5 for Lead
- AOC1-B58-D1.5 and AOC1-B58-D2.5 for Arsenic
- AOC1-B64-D1.5 and AOC1-B64-D2.5 for Arsenic
- AOC1-B77-D1.5 and AOC1-B77-D2.5 for Arsenic
- AOC1-B78-D1.5 and AOC1-B78-D2.5 for Arsenic

- AOC1-B81-D1.5 and AOC1-B81-D2.5 for Arsenic
- AOC1-B91-D1.5 and AOC1-B91-D2.5 for Arsenic
- AOC-B100-D1.5 and AOC1-B100-D2.5 for Lead
- AOC1-B108-D1.5 and AOC1-B109-D2.5 for Arsenic and Lead
- AOC1-B112-D1.5 and AOC1-B112-D2.5 for Arsenic

Please let me know if I need to amend the individual COCs to include the analysis request or send you a new COC.
Thanks
Justin

Creator: Soderblom, Tim

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	No sample date on page 7of10 of COC, logged in per container labels.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	False	No date page 7 of 10 of COC, logged in per container labels.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job Narrative
440-199093-2

Comments
Only the additional total Lead or Arsenic results, and the STLC Lead results are included in this report, per client's 1/3/18 email request.

Receipt
The samples were received on 12/21/2017 7:12 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.4º C and 1.5º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-199093-2

Laboratory: TestAmerica Irvine

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	EPA Region	Identification Number	Expiration Date
Alaska	State Program	10	CA01531	06-30-18
Arizona	State Program	9	AZ0671	10-14-18
California	LA Cty Sanitation Districts	9	10256	06-30-18
California	State Program	9	CA ELAP 2706	06-30-18
Guam	State Program	9	Cert. No. 17-003R	01-23-18 *
Hawaii	State Program	9	N/A	01-29-18 *
Kansas	NELAP	7	E-10420	07-31-18
Nevada	State Program	9	CA015312018-1	07-31-18
New Mexico	State Program	6	N/A	01-29-18 *
Northern Mariana Islands	State Program	9	MP0002	01-29-17 *
Oregon	NELAP	10	4028	01-29-18 *
USDA	Federal		P330-15-00184	07-08-18
Washington	State Program	10	C900	09-03-18

* Accreditation/Certification renewal pending - accreditation/certification considered valid.

440-199093 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for _____ Months

Special Instructions/QC Requirements & Comments:

Custody Seals Intact: ☐ Yes ☐ No | Custody Seal No.: | Cooler Temp. (°C): Obs'd:_____ Corr'd:_____ Therm ID No.:_____

Dennis
Can you have Pb run for STLC for the following soil samples?
AOC1-B6-D0.5
AOC1-B34-D0.5
AOC1-B108-D0.5
AOC1-B100-D0.5
Thanks,
Justin

Good morning Justin,

AOC3-B1, primary and dup, are going to be reported separately as job J198799-2.

I will go ahead and make the changes you have outlined in the email below; this email should be sufficient enough.

DENNIS TRAN

-External Email-

Hi Dennis
Patty is the project manager for a job that we conducted at the Reseda High School. I had a question regarding the analysis of dioxin and furans for lab report J198799. We requested a primary sample and dup to be analyzed but it was not reported.
I also submitted number of samples to be held. I would like to run some of those samples as outlined below. Do you need me to amend the original COC to request the analysis or submit a new COC? Or will this email suffice? (Lab ID numbers for the samples are J198798, J198799, J198876, J199093). Please let me know if you need further clarification.
Thanks

Justin King

Hi Patty
I did not see the results of the dioxin and furan testing for AOC3-B1. Were you going to report that separately?
Also, I will need the follow held samples analyzed.

- AOC1-B1-D1.5 and AOC1-B1-D2.5 for Arsenic.
- AOC1-B6-D1.5 and AOC1-B6-D2.5 for Lead
- AOC1-B8-D1.5 and AOC1-B8-D2.5 for Arsenic
- AOC1-B10-D1.5 and AOC1-B10-D2.5 for Arsenic
- AOC1-B22-D1.5 and AOC1-B22-D2.5 for Arsenic
- AOC1-B34-D1.5 and AOC1-B34-D2.5 for Lead
- AOC1-B58-D1.5 and AOC1-B58-D2.5 for Arsenic
- AOC1-B64-D1.5 and AOC1-B64-D2.5 for Arsenic
- AOC1-B77-D1.5 and AOC1-B77-D2.5 for Arsenic
- AOC1-B78-D1.5 and AOC1-B78-D2.5 for Arsenic

- AOC1-B81-D1.5 and AOC1-B81-D2.5 for Arsenic
- AOC1-B91-D1.5 and AOC1-B91-D2.5 for Arsenic
- AOC-B100-D1.5 and AOC1-B100-D2.5 for Lead
- AOC1-B108-D1.5 and AOC1-B109-D2.5 for Arsenic and Lead
- AOC1-B112-D1.5 and AOC1-B112-D2.5 for Arsenic

Please let me know if I need to amend the individual COCs to include the analysis request or send you a new COC.
Thanks
Justin

Narrative

Job Narrative
440-203718-2

Comments
Only the additional test results requested on 3/9/18 are included in this report.

Receipt
The samples were received on 2/19/2018 5:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.3º C, 1.5º C, 3.1º C and 3.3º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: Reseda HS PEA

TestAmerica Job ID: 440-203718-2

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Possible Hazard Identification
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for ___ Months

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other 1

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for_____ Months

Hello,

I was looking over the sample and two of the samples on your list do not exist.

- Analyze AOC1-B91-N10-D1.5-D for arsenic
- Analyze AOC1-B91-N10-D2.5-D for arsenic

These samples are not on either one of the jobs. However, I found AOC1-B91-N10-D1.5 and AOC1-B91-N10-D2.5 without the –D on one of the jobs. Was the –D a typo? Please confirm.

Thanks,

Martin Kim

Martin,

Do you have time to take samples off hold and add tests to a job -2 for the samples listed in the email below please?

Thanks,

PATTY MATA

-External Email-

Hi Patty
I would like to take the below samples off of hold and analyze for the following analysis.

- Analyze AOC1-B8-S10-D1.5 for arsenic
- Analyze AOC1-B8-S10-D2.5 for arsenic
- Analyze AOC1-B10-N5-D1.5 for arsenic
- Analyze AOC1-B10-N5-D2.5 for arsenic
- Analyze AOC1-B10-W5-D1.5 for arsenic
- Analyze AOC1-B10-W5-D2.5 for arsenic
- Analyze AOC1-B22-N5-D1.5 for arsenic
- Analyze AOC1-B22-N5-D2.5 for arsenic
- Analyze AOC1-B22-N10-D1.5 for arsenic
- Analyze AOC1-B22-N10-D2.5 for arsenic

- Analyze AOC1-B22-S5-D1.5 for arsenic
- Analyze AOC1-B22-S5-D2.5 for arsenic
- Analyze AOC1-B22-S10-D1.5 for arsenic
- Analyze AOC1-B22-S10-D2.5 for arsenic
- Analyze AOC1-B34-N5-D1.5 for lead
- Analyze AOC1-B34-N5-D2.5 for lead
- Analyze AOC1-B91-N5-D1.5 for arsenic
- Analyze AOC1-B91-N5-D2.5 for arsenic
- Analyze AOC1-B91-N10-D1.5-D for arsenic
- Analyze AOC1-B91-N10-D2.5-D for arsenic
- Analyze AOC1-B91-S5-D1.5 for arsenic
- Analyze AOC1-B91-S5-D2.5 for arsenic
- Analyze AOC1-B112-N5-D1.5 for arsenic
- Analyze AOC1-B112-N5-D2.5 for arsenic
- Analyze AOC1-B112-N10-D1.5 for arsenic
- Analyze AOC1-B112-N10-D2.5 for arsenic

Thanks,
Justin

Narrative

Job Narrative
440-204170-2

Comments
Only the additional test results requested on 3/9/18 are included in this report.

Receipt
The samples were received on 2/26/2018 6:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 0.1° C, 0.8° C, 0.8° C and 2.0° C.

Metals
Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) precision value for preparation batch 440-462587 and analytical batch 440-462781 was outside control limits for Arsenic. The individual MS and MSD recoveries were within limits and the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Subject: FW: Reseda Soil Sampling

Hello,

I was looking over the sample and two of the samples on your list do not exist.

- Analyze AOC1-B91-N10-D1.5-D for arsenic
- Analyze AOC1-B91-N10-D2.5-D for arsenic

These samples are not on either one of the jobs. However, I found AOC1-B91-N10-D1.5 and AOC1-B91-N10-D2.5 without the –D on one of the jobs. Was the –D a typo? Please confirm.

Thanks,

Martin Kim
Project Management Assistant

Subject: Reseda Soil Sampling

-External Email-

Hi Patty
I would like to take the below samples off of hold and analyze for the following analysis.

- Analyze AOC1-B8-S10-D1.5 for arsenic
- Analyze AOC1-B8-S10-D2.5 for arsenic
- Analyze AOC1-B10-N5-D1.5 for arsenic
- Analyze AOC1-B10-N5-D2.5 for arsenic
- Analyze AOC1-B10-W5-D1.5 for arsenic
- Analyze AOC1-B10-W5-D2.5 for arsenic
- Analyze AOC1-B22-N5-D1.5 for arsenic
- Analyze AOC1-B22-N5-D2.5 for arsenic
- Analyze AOC1-B22-N10-D1.5 for arsenic
- Analyze AOC1-B22-N10-D2.5 for arsenic

- Analyze AOC1-B22-S5-D1.5 for arsenic
- Analyze AOC1-B22-S5-D2.5 for arsenic
- Analyze AOC1-B22-S10-D1.5 for arsenic
- Analyze AOC1-B22-S10-D2.5 for arsenic
- Analyze AOC1-B34-N5-D1.5 for lead
- Analyze AOC1-B34-N5-D2.5 for lead
- Analyze AOC1-B91-N5-D1.5 for arsenic
- Analyze AOC1-B91-N5-D2.5 for arsenic
- Analyze AOC1-B91-N10-D1.5-D for arsenic
- Analyze AOC1-B91-N10-D2.5-D for arsenic
- Analyze AOC1-B91-S5-D1.5 for arsenic
- Analyze AOC1-B91-S5-D2.5 for arsenic
- Analyze AOC1-B112-N5-D1.5 for arsenic
- Analyze AOC1-B112-N5-D2.5 for arsenic
- Analyze AOC1-B112-N10-D1.5 for arsenic
- Analyze AOC1-B112-N10-D2.5 for arsenic

Thanks,
Justin

Comments
Only the results for additional tests requested on 3/13/18 and 3/15/18 are included in this report.

Receipt
The samples were received on 2/26/2018 6:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 0.1º C, 0.8º C, 0.8º C and 2.0º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-204170-3

Client Sample ID: AOC1-B34-N5-D0.5 — Lab Sample ID: 440-204170-53

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Lead	4.5		0.10	0.080	mg/L	20		6010B	STLC Citrate

Client Sample ID: AOC1-B1-E5-D1.5 — Lab Sample ID: 440-204170-87

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Hello,

Attached please find the report files for job 440-204170-2; LAUSD Reseda H.S., CA

Please feel free to contact me if you have any questions.

Thank you.

Please let us know if we met your expectations by rating the service you received from TestAmerica on this project by visiting our website at: Project Feedback[surveymonkey.com]

Subject: RE: Reseda Soil Sampling

Justin,

I had asked Martin Kim to help me add the new tests into our system and I thought he had emailed you with questions about a few sample IDs, but I guess he didn't say that all tests are in process, and I didn't email you either. Sorry for the lack of communication!

The tests were all added into our system and should be done today or tomorrow.

Thanks,

PATTY MATA
Project Manager

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	IDs on containers do not match the COC. Logged in per COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
440-207080-3

Comments
Only the results for additional sample tests requested by client on 4/12/18 are included in this report. Tests were cancelled by client for samples AOC1-B91-E10-D1.5 and AOC1-B91-E10-D2.5 prior to analysis.

Receipt
The samples were received on 3/26/2018 6:40 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.1° C and 0.4° C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-207080-3

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-18

Martin
Thanks for catching I never collect an AOC1-B22-N20 sample. I want to have the following logged in and analyzed.

- AOC1-B22-S15-D1.5 and AOC1-B22-S15-D2.5
- AOC1-B22-S20-D1.5 and AOC1-B22-S20-D2.5

Subject: FW: Step-down sampling

Hello,

I was going through the list and I noticed that two of the samples from the list weren't on that particular job.

- AOC1-B22-N20-D1.5 and AOC1-B22-N20-D2.5

The rest of the samples from the list have been logged in for total As tests. Please verify the sample ID's of these two samples. The only two samples left with AOC1-B22 are AOC1-B22-S20-D1.5/2.5 and AOC1-B22-S15-D1.5/2.5.

Martin,
Do you have time to add total As tests to the samples for Parsons' Reseda High School project for me?
Client sent a list below but didn't note job numbers, he just noted IDs and 3/26/18 sampling date.
Can you add tests on std TAT to job 2 (or 3 or whatever is the next number) with today as start date?

Thank you!

PATTY MATA

Subject: FW: Step-down sampling

-External Email-

Patty
I would like to run some of the held samples from the March 26th sampling event for Reseda High School.
Can you please run the following samples for Arsenic:

- AOC1-B8-S15-D1.5 and AOC1-B8-S15-D2.5
- AOC1-B22-N15-D1.5 and AOC1-B22-N15-D2.5
- AOC1-B22-N20-D1.5 and AOC1-B22-N20-D2.5
- AOC1-B77-SE22-D2.5
- AOC1-B81-NE15-D1.5 and AOC1-B81-NE15-D2.5
- AOC1-B81-NE20-D1.5 and AOC1-B81-NE20-D2.5
- AOC1-B81-SW15-D1.5 and AOC1-B81-SW15-D2.5
- AOC1-B81-SW20-D1.5 and AOC1-B81-SW20-D2.5
- AOC1-B91-N15-D1.5 and AOC1-B91-N15-D2.5
- AOC1-B91-N20-D1.5 and AOC1-B91-N20-D2.5
- AOC1-B91-E10-D1.5 and AOC1-B91-E10-D2.5
- AOC1-B112-N15-D1.5 and AOC1-B112-N15-D2.5

Thanks,
Justin

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Narrative
440-211214-2

Comments
No additional comments.

Receipt
The samples were received on 5/12/2018 2:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.0º C.

Receipt Exceptions
Only the results of additional tests requested per client's 5/24/18 email are included in this report.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Patty
Can you run samples AOC1-B81-NW35-D1.5 and AOC1-B81-NW35-D2.5 for arsenic?
Thanks
Justin

Patty
I just realized that there was an error with a sample ID. I have corrected it on the attached COC but it is a little hard to see. Can you please change the following:
AOC1-B81-NW35-D0.5 should be AOC1-B81-NE35-D0.5
AOC1-B81-NW35-D0.5D should be AOC1-B81-NE35-D0.5D
AOC1-B81-NW35-D1.5 should be AOC1-B81-NE35-D1.5
AOC1-B81-NW35-D2.5 should be AOC1-B81-NE35-D2.5
This will affect the two samples that I released for analysis.
Thanks
Justin

440-211214 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for ___ Months

Special Instructions/QC Requirements & Comments:

H = Hold

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.:		Cooler Temp. (°C). Obs'd: ___ Corr'd: ___		Therm ID No.:

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
This report was revised on 3/5/18 to change the sample ID for the following sample per client's 3/2/18 email request: AOC1-B81-NW5-D1.5-D (440-203718-72).

Receipt
The samples were received on 2/19/2018 5:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.3º C, 1.5º C, 3.1º C and 3.3º C.

Receipt Exceptions
The container label for the following samples did not match the information listed on the Chain-of-Custody (COC): AOC1-B100-E5-D0.5 (440-203718-34), AOC1-B78-SE5-D1.5-D (440-203718-64), AOC1-B81-NW5-D1.5 (440-203718-72), AOC1-B81-SW5-D1.5 (440-203718-89), AOC1-B108-S10-D0.5 (440-203718-109), AOC1-B108-S10-D1.5 (440-203718-110) and AOC1-B108-S10-D2.5 (440-203718-111).

Sample #34 The container labels list A0C1-B100-E5-00.5 09:50 , while the COC lists A0C1-B100-E5-00.5 @10:50.
Sample #64 The container labels list A0C1-B78-SW10-D1.5. @12:22 , while the COC lists A0C1-B78-SE5-D1.5-D @12:22.
Sample #72 The container labels list A0C1-B81-NW5-01.5-D @12:26, while the COC lists A0C1-B81-NW5-01.5 @12:26.
Sample #89 The container labels list A0C1-B81-SW5-D1.5-D @12:46, while the COC lists A0C1-B81-SW5-D1.5 @12:46.
Sample #109 The container labels list A0C1-B108-S10-00.5 @13:38, while the COC lists A0C1-B108-S10-00.5 @13:44.
Sample #110 The container labels list A0C1-B108-S10-01.5 @13:40, while the COC lists A0C1-B108-S10-01.5 @13:46.
Sample #111 The container labels list A0C1-B108-S10-D2.5 @13:42, while the COC lists A0C1-B108-S10-D2.5 @13:48.

Samples were logged in per COC.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: Reseda HS PEA

TestAmerica Job ID: 440-203718-1

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-18

Analysis Method	Prep Method	Matrix	Analyte

Possible Hazard Identification
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for ___ Months

OC 2/19/18

440-203718 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other 1

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for_____ Months

Special Instructions/QC Requirements & Comments:

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.:		Cooler Temp. (°C): Obs'd:_____ Corr'd:_____		Therm ID No.:_____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for ___ Months

Special Instructions/QC Requirements & Comments:

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	IDs on containers do not match the COC. Logged in per COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
440-204170-1

Comments
This report was revised on 3/8/18 to change the following sample IDs per client's 3/8/18 email request: AOC1-B91-S10-D0.5-D (440-204170-12) and AOC1-B1-E5-D0.5 (440-204170-86).

Receipt
The samples were received on 2/26/2018 6:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 0.1° C, 0.8° C, 0.8° C and 2.0° C.

Receipt Exceptions
The container label for the following samples did not match the information listed on the Chain-of-Custody (COC): AOC1-B34-S10-D0.5 (440-204170-69), AOC1-B34-S10-D2.5 (440-204170-71), AOC1-B1-N10-D2.5 (440-204170-77) and AOC1-B1-E5-D0.5-DUP (440-204170-86).

Sample #69 container labels list AOC1-B34-S10-D0.5 @ 09:54, while the COC lists AOC1-B34-S10-D0.5 @ 09:50.

Sample #71 container labels list AOC1-B34-S10-D0.5 @ 09:50, while the COC lists AOC1-B34-S10-D0.5 @ 09:54.

Sample #77 container labels list AOC1-B2-N10-D2.5 @ 07:35, while the COC lists AOC1-B1-N10-D2.5 @ 07:35.

Sample #86 container labels list AOC1-B1-E5-D0.5 @ 08:00, while the COC lists AOC1-B1-E5-D0.5-Dup @ 08:00.

Samples were logged in and labeled per COC. The client was contacted and they confirmed that COC times and IDs were the correct ones.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Arsenic	15		3.0	1.5	mg/Kg	5		6010B	Total/NA

Client Sample ID: AOC1-B1-E10-D0.5 — Lab Sample ID: 440-204170-89

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	8.8		3.0	1.5	mg/Kg	5		6010B	Total/NA

Client Sample ID: AOC1-B10-N5-D0.5 — Lab Sample ID: 440-204170-92

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	15		3.0	1.5	mg/Kg	5		6010B	Total/NA

Client Sample ID: AOC1-B10-N5-D0.5-DUP — Lab Sample ID: 440-204170-95

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	11		3.0	1.5	mg/Kg	5		6010B	Total/NA

Client Sample ID: AOC1-B10-N10-D0.5 — Lab Sample ID: 440-204170-96

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	4.5		3.0	1.5	mg/Kg	5		6010B	Total/NA

Client Sample ID: AOC1-B10-W5-D0.5 — Lab Sample ID: 440-204170-99

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	16		3.0	1.5	mg/Kg	5		6010B	Total/NA

Client Sample ID: AOC1-B10-W10-D0.5 — Lab Sample ID: 440-204170-102

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-204170-1

Client Sample ID: AOC1-B10-W10-D0.5 (Continued) — Lab Sample ID: 440-204170-102

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	12		3.0	1.5	mg/Kg	5		6010B	Total/NA

Client Sample ID: AOC1-B10-S5-D0.5 — Lab Sample ID: 440-204170-105

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	9.6		3.0	1.5	mg/Kg	5		6010B	Total/NA

Client Sample ID: AOC1-B10-S10-D0.5 — Lab Sample ID: 440-204170-108

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	7.9		3.0	1.5	mg/Kg	5		6010B	Total/NA

This Detection Summary does not include radiochemical test results.

Client Sample ID: F022418
Lab Sample ID: 440-204170-1
Date Collected: 02/24/18 07:30
Matrix: Water
Date Received: 02/26/18 18:10

Method: 6010B - Metals (ICP) - Total Recoverable

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-204170-1

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-18

440-204170 Chain of Custody

2/26/18

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for ____ Months

Special Instructions/QC Requirements & Comments: *NOTE: H = HOLD Sample

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	IDs on containers do not match the COC. Logged in per COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
This report was revised on 4/16/18 to correct the total Arsenic result for sample AOC1-B91-E10-D0.5-D (440-207080-71).

Receipt
The samples were received on 3/26/2018 6:40 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.1° C and 0.4° C.

Metals
Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Arsenic in preparation batch 440-466258 and analytical batch 440-466735 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for Arsenic in preparation batch 440-466258 and analytical batch 440-466735 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-207080-1

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-18

440-207080 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☑ Disposal by Lab ☐ Archive for _____ Months

Special Instructions/QC Requirements & Comments: NOTE: H = HOLD UNTIL REQUESTED BY PARSONS TO PROCESS

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
This report was revised on 5/25/18 to change selected sample IDs per client's emailed request.

Receipt
The samples were received on 5/12/2018 2:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.0º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Patty
I just realized that there was an error with a sample ID. I have corrected it on the attached COC but it is a little hard to see. Can you please change the following:
AOC1-B81-NW35-D0.5 should be AOC1-B81-NE35-D0.5
AOC1-B81-NW35-D0.5D should be AOC1-B81-NE35-D0.5D
AOC1-B81-NW35-D1.5 should be AOC1-B81-NE35-D1.5
AOC1-B81-NW35-D2.5 should be AOC1-B81-NE35-D2.5
This will affect the two samples that I released for analysis.
Thanks
Justin

Subject: TestAmerica report files from 440-211214-1 LAUSD Reseda H.S., CA

Hello,

Attached please find the report files for job 440-211214-1; LAUSD Reseda H.S., CA

Please feel free to contact me if you have any questions.

Thank you.

Please let us know if we met your expectations by rating the service you received from TestAmerica on this project by visiting our website at: Project Feedback[surveymonkey.com]

440-211214 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐Return to Client ☑Disposal by Lab ☐Archive for ___ Months

Special Instructions/QC Requirements & Comments:
H = Hold

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.:		Cooler Temp. (°C). Obs'd:	Corr'd:	Therm ID No..

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
440-198803-1

Comments
No additional comments.

Receipt
The samples were received on 12/19/2017 6:55 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.7º C and 5.9º C.

Receipt Exceptions
The following sample was not received: AOC1-B50-D0.5, but it was requested on COC form to be used as part of composite sample. Client was contacted and the affected sample was removed from the composite request due to no sample received.

GC Semi VOA
Method(s) 8081A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-449003 and analytical batch 440-449006 were outside control limits for Endosulfan sulfate. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
F1	MS and/or MSD Recovery is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Patty
We did not collect a sample at B50. Please omit B50 from composite.
Thanks
Justin

Subject: Missing B50 for composite for TestAmerica files from 440-198803-1 LAUSD Reseda H.S., CA

Hello,

We are missing the discrete B50 sample set but the attached COC for job 440-198803-1; LAUSD Reseda H.S., CA has request to put this sample into composite. Please let me know.

Please feel free to contact me if you have any questions.

Thank you.

Please let us know if we met your expectations by rating the service you received from TestAmerica on this project by visiting our website at: Project Feedback[surveymonkey.com]

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	See case narrative.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Laboratory: TestAmerica Irvine

Narrative

Job Narrative
440-199071-1

Comments
No additional comments.

Receipt
The samples were received on 12/20/2017 6:25 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.0º C and 2.7º C.

GC Semi VOA
Method(s) 8081A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-449003 and analytical batch 440-449006 were outside control limits for Endosulfan sulfate. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8081A: Surrogate recovery for the following samples were outside control limits: AOC1-(B6,B8,B9,B10) (440-199071-40). Evidence of matrix interference is present, with dark-colored extract; therefore, re-extraction and re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
X	Surrogate is outside control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
440-199094-1

Comments
No additional comments.

Receipt
The samples were received on 12/21/2017 7:12 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.4º C and 1.5º C.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
440-199046-1

Comments
No additional comments.

Receipt
The samples were received on 12/22/2017 6:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.4º C and 4.3º C.

Receipt Exceptions
The number of containers for the following sample did not match the information listed on the Chain-of-Custody (COC): EB-2017-12-22 (440-199046-8).

GC/MS VOA
Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 440-448948 recovered outside control limits for the following analytes: Bromoform and 1,2-Dibromo-3-Chloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample duplicate (LCSD) for analytical batch 440-448948 recovered outside control limits for the following analytes: n-Butylbenzene, 1,3,5-Trimethylbenzene and 1,2-Dibromo-3-Chloropropane. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: Internal standard (ISTD) 1,4-Dichlorobenzene-d4 responses for the following samples were below the lower control limit: AOC4-B1-5.0 (440-199046-4) and AOC4-B1-5.0 DUP (440-199046-5). The samples were re-extracted and/or re-analyzed with concurring results, and the original set of data has been reported. The affected analytes were flagged with asterisks.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8015B: The 8015-DRO matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 440-448460 and analytical batch 440-448504 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) was within acceptance limits.

Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-448690. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method(s) 8082: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-448689. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method(s) 3510C/8082: Slightly elevated reporting limits are provided for the following sample due to insufficient sample volume (less than 250ml) provided for preparation: EB-2017-12-22 (440-199046-8).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

Job ID: 440-199046-1 (Continued)

Laboratory: TestAmerica Irvine (Continued)

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	ISTD response or retention time outside acceptable limits

GC Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-199046-1

Laboratory: TestAmerica Irvine

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

440-199046 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be a …nth)

☐Return to Client ☑Disposal by Lab ☐Archive for _____ Months

Special Instructions/QC Requirements & Comments:

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.:	Cooler Temp. (°C): Obs'd: _____ Corr'd: _____	Therm ID No.:

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
440-207103-1

Comments
No additional comments.

Receipt
The samples were received on 3/26/2018 6:40 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.5º C.

GC/MS VOA
Method(s) 8260B: Internal standard (ISTD) 1,4-Dichlorobenzene-d4 response for the following sample was below the lower control limit: AOC4-SV9-5 (440-207103-3). The sample was re-extracted and/or re-analyzed with concurring results. Affected analytes would be potentially biased high, but all affected results were ND in the sample.

Method(s) 8260B: Internal standards (ISTD) 1,4-Dichlorobenzene-d4 and Chlorobenzene-d5 responses for the following sample were below the lower control limit: AOC4-SV6-5 (440-207103-8). The sample was re-extracted and/or re-analyzed with concurring results. Affected analytes would be potentially biased high.

Method(s) 8260B: Surrogate Toluene-d8 recovery for the following sample was above the upper control limit: AOC4-SV6-5 (440-207103-8). Re-extraction and/or re-analysis was performed with concurring results.

Method(s) 8260B: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 440-466784 recovered outside control limits for 1,2-Dibromo-3-Chloropropane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
Method(s) 8015B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 440-467331 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-466303 and analytical batch 440-466390. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method(s) 8015B: The method blank for preparation batch 440-466419 and analytical batch 440-466582 contained ORO (C23-C40) above the method detection limit (MDL). This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8082: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-466355 and analytical batch 440-466565. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.
*	ISTD response or retention time outside acceptable limits
X	Surrogate is outside control limits

GC VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-207103-1

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8015B		Solid	GRO (C4-C12)
8015B		Water	GRO (C4-C12)
8015B	3510C	Water	DRO (C13-C22)
8015B	3510C	Water	ORO (C23-C40)
8015B	3546	Solid	DRO (C13-C22)
8015B	3546	Solid	ORO (C23-C40)
8260B		Water	m,p-Xylene
8260B	5035	Solid	m,p-Xylene

List Number: 1

Creator: Soderblom, Tim

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 5/12/2018 2:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.9º C.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AOC4-SV11-15 (440-211213-9). On the COC sample ID was listed AO4-SV11-15 and on the container labels was listed AOC4-SAV11-15. Client was contacted concerning the sample ID for AOC4-SV11-15 (440-211213-9). The sample ID was changed per client's 5/14/18 email.

EPA 8260B analysis could not be performed on the trip blank sample; TB (440-211213-7). There was only one vial received for the trip blank and it cracked during storage in the lab's freezer prior to analysis.

GC/MS VOA
Method(s) 8260B: Surrogate recovery for 4-Bromofluorobenzene for the following sample was above the upper control limit: AOC4-SV12-5 (440-211213-1). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
Method(s) 8015B: Surrogate recoveries for the following batch QC samples were outside control limits for analytical batch 440-476869: (440-210928-F-4 MS) and (440-210928-F-4 MSD). Evidence of matrix interference is present.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch preparation batch 440-476183 and analytical batch 440-476494. The laboratory control sample (LCS) was performed in duplicate to provide precision data for the batch.

Method(s) 8082: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-476777 and analytical batch 440-477820. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) 3510C / 8082: Elevated reporting limits are provided for the following sample due to insufficient sample volume of less than 250ml provided: EB-51219-C (440-211213-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-211213-1

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-18

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8015B		Solid	GRO (C4-C12)
8015B		Water	GRO (C4-C12)
8015B	3510C	Water	DRO (C13-C22)
8015B	3510C	Water	ORO (C23-C40)
8015B	3546	Solid	DRO (C13-C22)
8015B	3546	Solid	ORO (C23-C40)
8260B		Water	m,p-Xylene
8260B	5035	Solid	m,p-Xylene

To: Kim, Martin C.; Mata, Patty
Subject: RE: PLEASE READ: TestAmerica Sample Login Confirmation files from 440-211213 LAUSD Reseda H.S., CA

-External Email-

The sample ID for Sample #9 should be AOC4-SV11-15. Please do not analyze the DUP for lead. Thanks, Justin

Subject: PLEASE READ: TestAmerica Sample Login Confirmation files from 440-211213 LAUSD Reseda H.S., CA

Hello,

Attached, please find the Sample Confirmation files for job 440-211213; LAUSD Reseda H.S., CA

Sample #9 - On the COC was listed AO4-SV11-15 and on the COC was listed AOC4-SAV11-15
Please confirm which is correct.

There is a mark for Lead Analysis on the COC for the DUP sample. It has not been logged in for Lead currently.
Please confirm whether or not it is supposed to be logged in for Lead.

Please feel free to contact me or your PM, Patty Mata, if you have any questions.

Thank you.

Please let us know if we met your expectations by rating the service you received from TestAmerica on this project by visiting our website at: Project Feedback[surveymonkey.com]

Creator: Bonta, Lucia F

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
440-199041-1

Comments
No additional comments.

Receipt
The sample was received on 12/22/2017 6:00 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.3º C.

GC/MS VOA
Method(s) 8260B: Internal standard (ISTD) response for TBA-d9 for the following sample was above outside acceptance criteria: Drum Composite (440-199041-1). This ISTD does not correspond to any of the requested target compounds; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 440-448948 recovered outside control limits for the following analytes: Bromoform and 1,2-Dibromo-3-Chloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample duplicate (LCSD) for analytical batch 440-448948 recovered outside control limits for the following analytes: n-Butylbenzene, 1,3,5-Trimethylbenzene and 1,2-Dibromo-3-Chloropropane. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8015B: The 8015-DRO matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 440-448460 and analytical batch 440-448504 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) was within acceptance limits.

Method(s) 8081A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-449003 and analytical batch 440-449006 were outside control limits for Endosulfan sulfate. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

APPENDIX E

JONES ENVIRONMENTAL
LABORATORY RESULTS

Client:	Parsons	**Report date:**	1/3/2018
Client Address:	100 West Walnut Street Pasadena, CA 91124	**JEL Ref. No.:** **Client Ref. No.:**	F-0093 450810-02000
Attn:	Justin King	**Date Sampled:** **Date Received:**	1/3/2018 1/3/2018
Project Name:	Reseda High School REA	**Date Analyzed:**	1/3/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates/Gasoline Range Organics

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Project Name:	Reseda High School PEA	**Date Analyzed:**	2/27/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Colby Wakeman
QA/QC Manager

LABORATORY RESULTS

Client:	Parsons	**Report date:**	4/21/2018
Client Address:	100 West Walnut Street Pasadena, CA 91124	**JEL Ref. No.:** **Client Ref.No:**	F-0124 450810
Attn:	Justin King	**Date Sampled:** **Date Received:**	4/21/2018 4/21/2018
Project Name:	Reseda High School PEA	**Date Analyzed:**	4/21/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval: _____

LABORATORY RESULTS

Client:	Parsons	**Report date:**	5/22/2018
Client Address:	100 West Walnut Street Pasadena, CA 91124	**JEL Ref. No.:** **Client Ref. No.:**	F-0134 450810
Attn:	Justin King	**Date Sampled:** **Date Received:**	5/22/2018 5/22/2018
Project Name:	Reseda High School PEA	**Date Analyzed:**	5/22/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates/Gasoline Range Organics

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Steve Jones, Ph.D.
Laboratory Manager

UCL Statistics for Uncensored Full Data Sets

User Selected Options	
Date/Time of Computation	ProUCL 5.16/29/2018 1:14:54 PM
From File	WorkSheet.xls
Full Precision	OFF
Confidence Coefficient	95%
umber of Bootstrap Operations	2000

Arsenic; 0-0.5 ft bgs

General Statistics

Total Number of Observations	220	Number of Distinct Observations	75
		Number of Missing Observations	0
Minimum	1.9	Mean	10.39
Maximum	33	Median	8
SD	6.233	Std. Error of Mean	0.42
Coefficient of Variation	0.6	Skewness	1.698

Normal GOF Test

Shapiro Wilk Test Statistic	0.81	**Shapiro Wilk GOF Test**	
5% Shapiro Wilk P Value	0	Data Not Normal at 5% Significance Level	
Lilliefors Test Statistic	0.193	**Lilliefors GOF Test**	
5% Lilliefors Critical Value	0.0602	Data Not Normal at 5% Significance Level	

Data Not Normal at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	11.08	95% Adjusted-CLT UCL (Chen-1995)	11.13
		95% Modified-t UCL (Johnson-1978)	11.09

Gamma GOF Test

A-D Test Statistic	5.171	**Anderson-Darling Gamma GOF Test**	
5% A-D Critical Value	0.758	Data Not Gamma Distributed at 5% Significance Level	
K-S Test Statistic	0.132	**Kolmogorov-Smirnov Gamma GOF Test**	
5% K-S Critical Value	0.0617	Data Not Gamma Distributed at 5% Significance Level	

Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics

k hat (MLE)	3.629	k star (bias corrected MLE)	3.583
Theta hat (MLE)	2.861	Theta star (bias corrected MLE)	2.898
nu hat (MLE)	1597	nu star (bias corrected)	1576
MLE Mean (bias corrected)	10.39	MLE Sd (bias corrected)	5.486
		Approximate Chi Square Value (0.05)	1485
Adjusted Level of Significance	0.0489	Adjusted Chi Square Value	1485

Assuming Gamma Distribution

95% Approximate Gamma UCL (use when n>=50))	11.02	95% Adjusted Gamma UCL (use when n<50)	11.03

Lognormal GOF Test

Shapiro Wilk Test Statistic	0.962	**Shapiro Wilk Lognormal GOF Test**	
5% Shapiro Wilk P Value	2.6838E-4	Data Not Lognormal at 5% Significance Level	
Lilliefors Test Statistic	0.0975	**Lilliefors Lognormal GOF Test**	
5% Lilliefors Critical Value	0.0602	Data Not Lognormal at 5% Significance Level	

Data Not Lognormal at 5% Significance Level

Lognormal Statistics

Minimum of Logged Data	0.642	Mean of logged Data	2.196
Maximum of Logged Data	3.497	SD of logged Data	0.522

Assuming Lognormal Distribution

95% H-UCL	10.98	90% Chebyshev (MVUE) UCL	11.45
95% Chebyshev (MVUE) UCL	11.98	97.5% Chebyshev (MVUE) UCL	12.7
99% Chebyshev (MVUE) UCL	14.13		

Nonparametric Distribution Free UCL Statistics

Data do not follow a Discernible Distribution (0.05)

Nonparametric Distribution Free UCLs

95% CLT UCL	11.08	95% Jackknife UCL	11.08
95% Standard Bootstrap UCL	11.07	95% Bootstrap-t UCL	11.15
95% Hall's Bootstrap UCL	11.17	95% Percentile Bootstrap UCL	11.06
95% BCA Bootstrap UCL	11.13		
90% Chebyshev(Mean, Sd) UCL	11.65	95% Chebyshev(Mean, Sd) UCL	12.22
97.5% Chebyshev(Mean, Sd) UCL	13.01	99% Chebyshev(Mean, Sd) UCL	14.57

Suggested UCL to Use

95% Chebyshev (Mean, Sd) UCL 12.22

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

EXECUTIVE SUMMARY

This document presents the results of a *Supplemental Preliminary Endangerment Assessment – Equivalent* (PEA-E) *Report* (Report) conducted for Los Angeles Unified School District's (LAUSD) Reseda High School (Site) in support of a Comprehensive Modernization Project (CMP). This Report presents a summary of Supplemental PEA-E activities, which includes several sampling and analyses events, performed in support of the proposed CMP on the school campus, located at 18230 Kittridge Street, Reseda, California (**Figure 1**).

Initial PEA-E activities were conducted between December 2017 and May 2018 to assess environmental conditions at selected areas within the CMP footprint prior to LAUSD's proposed demolition, modernization and construction activities. The Site background and environmental setting details are presented in the initial PEA-E Report (Parsons 2018a). The Supplemental PEA-E activities were conducted between September 2018 and January 2019 to further delineate soil vapor impacts in and around the Industrial Arts Building (**Figure 2**). The Supplemental PEA-E was conducted per the Draft Indoor Air Sampling Workplan (Parsons, 2018b) that was verbally approved by LAUSD on October 8, 2018. Various additional sampling activities described in this document were requested by LAUSD as the work progressed.

The following conclusions were derived from the supplemental investigation conducted at Reseda High School for soil, soil vapor and indoor air. Previous recommendations regarding the presence of lead and arsenic in soil above their respective PSLs are documented in the PEA-E Report (Parsons, 2018a).

Soil

- Soil was sampled for PCBs, TPH, and VOCs during the supplemental investigation in AOC4. There were no detections above the PSLs, which is consistent with the original investigation results (Parsons, 2018a). Therefore, PCBs, TPH, and VOCs are not considered COCs in soil.

Soil Vapor

- A total of 41 soil vapor samples, including duplicates, were collected from selected soil vapor probes during the supplemental investigation on September 5 and 19, October 9, 2018 and January 3, 2019 to further characterize soil vapor concentrations in AOC4. Select probes were sampled in multiple events to provide additional data for decision-making purposes. LAUSD Office of Environmental Health and Safety (OEHS) requested that the analytical data now be compared against the DTSC's future PSLs. PCE was detected above the future PSL (15 µg/m^3) at 31 sample (either 5 or 15 ft bgs) locations. In the 41 vapor samples, PCE concentrations ranged from 1.7 µg/m^3 (AOC4-SV17-5) to 1,440 µg/m^3 (AOC4-SV10-5). The future PSL for naphthalene is 2.8 µg/m^3. Naphthalene exceeded the future PSL concentration in five of the 41 samples, ranging from 3.0 µg/m^3 (AOC4-SV16-

5) to 774 µg/m^3 (AOC4-SV8-15). 1,2,4-trimethylbenzene exceeded the future PSL concentration (2,100 µg/m^3) in one (AOC4-SV8-15) of the 41 samples, at 2,440 µg/m^3. Benzene exceeded the future PSL concentration (3.2 µg/m^3) in one (AOC4-SV8-15) of the 41 samples, at 7 µg/m^3. Note that for benzene and naphthalene the non-detect values reported by the laboratory are the method detection limits; some of which exceed the future PSLs. No other VOCs were detected above their respective PSLs.

- Based on the multiple soil vapor sampling events from previously installed and more recently installed soil vapor probes, vapor-phase VOCs are considered laterally delineated but not vertically delineated (**Figure 5 and Figure 6**). VOCs, including PCE (the most prevalent compound of concern), was detected above the future PSLs in soil vapor at 5- and 15-ft bgs at probe locations in many of the previously installed soil vapor probe locations (AOC4-SV1 through AOC4-SV13) and in the soil vapor probe locations AOC4-SV13 through AOC4-SV15 installed for the supplemental investigation.
- Several soil vapor probes had reported concentrations of naphthalene and 1,2,4-trimethylbenzene above their respective future PSL. As discussed in Section 3.5, these two compounds have not been observed in any of the other soil vapor probes sampled during multiple events during the initial and supplemental scope of work. Given the sporadic and isolated nature of these detections they are not considered Site COCs.
- On September 15 and 19, 2018, 12 sub-slab vapor pins were sampled for soil vapor. PCE concentrations in the sub-slab vapor pins sampled on September 15 and 19, 2018 ranged from 18 µg/m^3 (AOC4-SS10) to 1,300 µg /m^3 (AOC4-SS-3). Based on PCE concentrations exceeding the sub-slab PSLs, indoor and outdoor air sampling was conducted to further assess vapor intrusion potential to indoor air.
- Benzene was detected at concentrations above the future PSLs at various soil vapor probes and sub-slab probes during the initial investigation (May 2018 event). Subsequent sampling of these and additional probes conducted during the supplemental investigation did not confirm the continued presence of benzene in soil vapor probes and sub-slab probes. Based on the benzene detections during the initial investigation it is considered a Site COC.

Indoor Air

During the supplemental investigation, three indoor and outdoor air sampling events were conducted using Summa canisters. For each event, three outdoor air samples and four indoor air samples were collected. These samples were collected concurrent with selected sub-slab vapor pins to help interpret the origin of any indoor air VOC detections.

- PCE was not detected above the residential PSL (0.46 µg/m^3) in any of the 23 indoor, outdoor, or underground utility tunnel air samples collected on any of the three sample dates. Low concentrations of PCE were detected with the HVAC system on and with it off. Thus, even under worst-case conditions (i.e., HVAC off, which reduces the dilution of indoor air with outdoor air), exposures to PCE in indoor air result in a residential risk

estimate less than 1 x 10^{-6} and noncancer hazard quotient less than one, which is acceptable. Although PCE concentrations are below the PSL in indoor air, the sub-slab concentrations are high enough that there is still a potential for concern if the existing building is replaced by a new building.

- As discussed in Section 5.2, benzene in soil vapor and sub-slab soil vapor at the Site does exceed the future PSLs, but the concentrations of benzene in indoor air and outdoor air appear to be relatively similar, indicating that benzene does not represent a potential vapor intrusion issue.

Recommendations

The following are recommendations based on the above conclusions:

- A Removal Action Workplan (RAW) should be developed for the Site to address PCE and benzene soil vapor impacts above the future PSLs, as well as to address previously identified (Parsons, 2018a) shallow soils impacted with lead and/or arsenic above their PSLs.

1.0 INTRODUCTION

This document presents the results of a *Supplemental Preliminary Endangerment Assessment – Equivalent* (PEA-E) *Report* (Report) conducted for Los Angeles Unified School District's (LAUSD) Reseda High School (Site) in support of a Comprehensive Modernization Project (CMP). This Report presents a summary of Supplemental PEA-E activities, which includes several sampling and analyses events, performed in support of the proposed CMP on the school campus, located at 18230 Kittridge Street, Reseda, California (**Figure 1**).

Initial PEA-E activities were conducted between December 2017 and May 2018 to assess environmental conditions at selected areas within the CMP footprint prior to LAUSD's proposed demolition, modernization and construction activities. The Site background and environmental setting details are presented in the initial PEA-E Report (Parsons 2018a). The Supplemental PEA-E activities were conducted between September and January 2019 to further delineate soil vapor impacts in and around the Industrial Arts Building (**Figure 2**). The Supplemental PEA-E was conducted per the Draft Indoor Air Sampling Workplan (Parsons, 2018b) that was verbally approved by LAUSD on October 8, 2018. Various additional sampling activities described in this document were requested by LAUSD as the work progressed. The work was conducted in accordance with applicable regulatory including the *Preliminary Environmental Assessment Guidance Manual* (DTSC, 2015a) prepared by the California Department of Toxic Substances Control (DTSC). A human health screening evaluation (HHSE) was conducted for the Site based on the soil and soil vapor analytical data generated during the supplemental field investigation.

2.0 SAMPLING ACTIVITIES

The following sections describe the Supplemental PEA-E activities performed, including sampling strategy, methods and procedures, sample handling, decontamination procedures, and management of investigation-derived waste (IDW) for the field investigation. Soil sampling and soil vapor probe installation was conducted on September 10 and October 6, 2018. Soil vapor sampling was conducted on September 15 and 19 and October 9, 2018, and January 3, 2019. Indoor and outdoor air sampling with concurrent sub-slab soil vapor sampling was conducted on October 5 and 6, 2018, and January 3, 2019.

Site access and fieldwork notifications to school administrative personnel were coordinated with the LAUSD-OEHS Project Manager, the LAUSD Complex Project Manager, and the Reseda High School Plant Manager. The following subcontractors supported the fieldwork: Pacific Coast Locators (subsurface utility clearance), Rice General (concrete coring and hand augering), Gregg Drilling (direct push soil sampling and soil vapor probe installation), TestAmerica Laboratories, Inc. (soil sample analysis), Jones Environmental (soil vapor sample collection/analysis), and Belshire Environmental Services, Inc. (IDW transport and disposal).

2.1 SAMPLING STRATEGY

The supplemental PEA-E field program consisted of soil and soil vapor sampling to further investigate the recommended environmental conditions (RECs) in and around Area of Concern 4 (AOC4), which is the Industrial Arts buildings in the central portion of the school campus. Thirteen soil vapor probes (AOC4-SV1 and AOC4-SV13) were previously installed and sampled during the PEA-E field investigation (Parsons, 2018a). Soil vapor probes AOC4-SV14 through AOA4-SV17 were subsequently installed and sampled to further delineate volatile organic compounds (VOCs) in soil gas. Twelve sub-slab soil vapor pins were also installed and sampled in the four Industrial Arts building classrooms to evaluate VOCs immediately beneath the foundation slabs. The sample locations, depths, analytical parameters, and sample location rationale were approved by LAUSD. Soil vapor and sub-slab soil vapor locations are shown on **Figures 3.**

Based on the results of the soil vapor and sub-slab soil vapor samples, indoor air samples were collected to determine if there is a complete vapor intrusion pathway and a potential human health risk associated with the Industrial Arts Building in Rooms IA4, IA5A, IA5B, and IA6. Outdoor air samples and sub-slab soil vapor samples (at select locations) were collected concurrently with indoor air samples. Indoor and outdoor air sample locations are shown on **Figure 4**.

2.2 PRELIMINARY SCREENING LEVELS

Analytical results for the soil, soil vapor, sub-slab soil vapor, and outdoor air samples were compared with risk-based screening levels to determine if the analytes are present at the Site at concentrations that may represent a potential health risk. The derivation of the screening levels used for the various chemical constituents is described in the following sub-sections. The screening levels are referred to here and after as PSLs (preliminary screening levels). Note that in the initial PEA-E Report (Parsons 2018a), the current (as of 2018) PSLs were used to compare the data generated during the initial PEA activities. Based on LAUSD's subsequent request, the soil vapor and sub-slab soil vapor data generated during the Supplemental PEA-E activities are compared against the screening levels generated using the USEPA (2015) attenuation factors, as recommended in DTSC's draft vapor intrusion guidance (Haley and Aldrich, 2018).

2.2.1 Preliminary Screening Levels for Soil

For direct exposures to soils, DTSC's (2015a) *Preliminary Endangerment Assessment Manual* states that the risk-based screening levels that should be used are the "the USEPA Regional Screening Level (RSL) for residential land use, modified as necessary by the DTSC in Human Health Risk Assessment (HHRA) Note 3." Thus, the PSLs for soil used here are, in general, the USEPA (2018) RSLs unless DTSC (2018) has published a screening value, termed the DTSC-SL. Chemicals with special considerations are discussed in more detail below.

Petroleum hydrocarbons: Neither DTSC (2018) nor USEPA (2018) provide risk-based screening levels for petroleum hydrocarbons as measured by USEPA 8015. Instead, DTSC (2015)

recommends that the risk-based screening levels derived by the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB, 2019) for direct contact be used.

2.2.2 Screening Levels for Soil Vapor and Sub-Slab Soil Vapor

Soil vapor screening levels were based on the USEPA (2018) residential RSLs for air, as modified by the DTSC (2018) residential screening levels (SLs) for air. However, these screening levels are for indoor and/or ambient air. To convert them to soil vapor and sub-slab soil vapor screening levels, the indoor air screening levels are divided by an attenuation factor. Both DTSC (2011) and USEPA (2015) recommend different attenuation factors. However, DTSC has incorporated the USEPA (2015) attenuation factors into their draft vapor intrusion guidance (Haley and Aldrich, 2018). As that guidance has not yet been released, soil vapor and sub-slab soil vapor PSLs were derived using both the DTSC (2011) attenuation factors (called the "current PSLs") and the USEPA (2015) attenuation factors (called the "future PSLs").

2.2.3 Screening Levels for Indoor Air

Indoor air screening levels were taken from the USEPA (2018) residential RSLs for air, as modified by the DTSC (2018) residential SLs for air.

2.3 PRE-FIELD ACTIVITIES

Soil boring locations were pre-marked with white paint and Underground Service Alert of Southern California (DigAlert) was notified (on September 4 and October 3, 2018) of the proposed boring locations prior to initiating boring activities. DigAlert contacted the utility owners of record within the Site vicinity and notified them of the planned subsurface investigation. The utility owners of record, or their designated agents, clearly marked the position of their utilities on the ground surface on the public right-of-way sidewalks and street adjacent to the area designated for investigation, up to the school property line. LAUSD provided several available as-built plans depicting locations of subsurface structures and utilities which were also reviewed prior to marking the boring locations.

The proposed excavation areas were surveyed by Pacific Coast Locators, a private utility locator, for the presence of underground utilities using geophysical methods (including ground-penetrating radar, electromagnetic utility locating, and deep search metal detector). Based on the presence of subsurface utilities identified in several locations, each affected boring location was relocated slightly or cancelled, to avoid causing damage to the utility.

2.4 FIELD ACTIVITIES

The following work was completed in AOC4:

On September 10, 2018 soil vapor probes AOC4-SV14 and AOC4-SV15 were installed at 5 and 15 feet (ft) below ground surface (bgs), and sub-slab probes AOC4-SS-4 through AOC4-SS-12 were installed inside the Industrial Arts buildings.

On September 15, 2018 soil vapor probes AOC4-SV1, AOC4-SV2, AOC4-SV3, AOC4-SV6, AOC4-SV8 – AOC4-SV11, AOC4-SV15, and sub-slab probes AOC4-SS8 through AOC4-SS12 were sampled.

On September 19, 2018, soil vapor probes AOC4-SV9, AOC4-SV10, AOC4-SV11, AOC4-SV13 and AOC4-SV14 were sampled, and sub-slab probes AOC4-SS1 through AOC4-SS5, and AOC4-SS7 were sampled.

On October 5, 2018, soil vapor probes AOC4-SV16 and AOC4-SV17 were installed (5 and 15 ft bgs), west and north of the Industrial Arts buildings, respectively. Sub-slab probes AOC4-SS3, AOC4-SS5, AOC4-SS7 and AOC4-SS12 were sampled. Indoor air samples IAS-1 through IAS-4 and outdoor air samples OAS-1 through OAS-3, were collected while the heating, ventilation and air conditioning (HVAC) unit was in normal operating mode.

On October 6, 2018 sub-slab probes AOC4-SS3, AOC4-SS5, AOC4-SS7 and AOC4-SS12 were sampled. Indoor air samples IAS-1 through IAS-4 and outdoor air samples OAS-1 through OAS-3, were collected while the HVAC unit was in non-operating (off) mode.

On October 9, 2018, soil vapor probes AOC4-SV16 and AOC4-SV17 were sampled.

On January 3, 2019, the following samples were collected while the HVAC system was in normal operating mode:

- Indoor air samples IAS-1 through IAS-4.
- Outdoor air samples OAS-1 through OAS-3.
- Underground utility tunnel air samples UT-1 and UT-2.
- Sub-slab samples AOC4-SS3, AOC4-SS5 and AOC4-SS7.
- Soil vapor probes AOC4SV5, AOC4-10, AOC4-SV12, AOC4-SV16 and AOC4-SV17.

The following sections provide more detail on the probe installation and sampling activities.

2.4.1 Soil Sample Collection and Probe Construction

During installation of soil vapor probes AOC4-SV14 and AOC4-SV15 on September 10, 2018 and AOC4-SV16 and AOC4-SV17 on October 5, 2018, soil samples were collected at 5 and 15 ft depth intervals. Each soil sample was collected in a manner that minimized disturbance and allowed the sample to retain as much of the original structure as possible. Soil samples were collected directly from the hand auger at each depth interval and placed in a laboratory-provided glass jar and TerraCore sample container. Soil samples were collected in the individual containers, which were placed in individual sealable plastic bags. Each sample container was labeled individually, stored in an ice chest containing ice, and delivered to a certified laboratory with a chain-of-custody form.

Soil vapor probes AOC4-SV14 through AOC4-SV17 were installed as dual-nested probes, using a hand auger. The concrete was cored at boring locations AOC4-SV14 and AOC4-SV15 prior to hand augering. A 6-inch long stainless-steel inlet screen was connected to ¼-inch outer diameter

Teflon tubing, which extended from ground surface to approximately 14.5- to 15-ft bgs and 4.5- to 5-ft bgs. The screens were centered within approximately 1 foot of #2/16 sand so that approximately 3 inches of sand extended above and below the screen ends. One foot of dry granular bentonite was placed immediately above each sand interval and then overlain with hydrated granular bentonite. Granular bentonite extended from 14.25- to 5.25-ft bgs, and from 4.25-ft bgs to 1-foot bgs. Near ground surface, the vapor monitoring probe tube ends were placed in a plastic bag and coiled in the top of the borehole. The cores at AOC4-SV14 and AOC4-SV15 were capped with temporary asphalt patch. Boring logs are in **Appendix A**.

Sub-Slab Vapor Pin Construction

Sub-slab soil vapor sampling was conducted by installing a VAPOR PIN® at nine locations (AOC4-SS4 through AOC4-SS12) inside the Industrial Arts buildings. A hammer drill was used to drill a 1 ½-inch diameter hole into the concrete a minimum of 1 ¾-inches into the slab. A 5/8-inch diameter hole was drilled through the slab and approximately 1-inch into the underlying soil to form a void. The lower end of the VAPOR PIN® assembly was placed in the hole and the pin was tapped into place using a dead hammer. The VAPOR PIN® was protected using the flush-mount cover.

2.4.2 Soil Vapor Sample Collection

The vapor monitoring probes and sub-slab probes were allowed to equilibrate at least 48 hours prior to purging and sampling. The probes were sampled in accordance with *Department of Toxic Substances Control (DTSC) 2015 Advisory – Active Soil Gas Investigations* (DTSC, 2015b). Purge volumes were calculated at each vapor probe using the volume of the soil vapor probe, filter pack, dry bentonite, and the tubing in the purge/sampling train to the purge pump.

Prior to purging and sampling at each soil vapor probe or sub-slab probe, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of approximately 100 inches of water, sealing the entire system and observing the vacuum for a minimum of 1 minute. A vacuum gauge, connected in parallel to the apparatus, was used to measure the vacuum. The above-ground fittings were adjusted until there was no noticeable change in the vacuum.

The purge and sampling flow rate was approximately 200 cubic centimeters per minute (cc/min), as noted on the laboratory provided analytical reports and chain of custody (CoC) forms. A default of 3 purge volumes was used as recommended by DTSC (2015b) guidance. Purging was completed using a pump except if noted on the CoC. Soil vapor samples were collected in glass gas-tight syringes equipped with Teflon plungers, with the exception of samples collected on October 9, 2018 and January 4, 2019, which were collected in 1-liter Summa canister.

A tracer gas of n-pentane, n-hexane, and n-heptane was used as leak-test compounds to determine if there were surface leaks into the subsurface due to lack of annular space probe seals. The tracer gas was placed at the tubing-surface interface before sampling. The tracer gas was included as a target analyte during the VOC analysis.

Soil vapor samples were analyzed for VOCs by a mobile laboratory using EPA Method 8260, with the exception of soil vapor samples collected from AOC4-SV16 and AOC4-SV17 (October 9, 2018), which were analyzed using EPA Method TO-15. The quality assurance quality control (QA/QC) documents are provided with the soil vapor laboratory reports.

2.4.3 Indoor and Outdoor Air Sampling

Indoor air sampling locations were selected to provide data to evaluate potential indoor air risk to possible future occupants of the Industrial Arts buildings IA4, IA5A, IA5B, and IA6.

On October 5 and 6, 2018, air samples were collected in 6-liter Summa canisters from each of the four rooms listed directly above. Air samples were collected on October 5 with the HVAC system in normal operating mode (on) and October 6 with the HVAC system non-operating (off) mode. Three outdoor background ambient air samples were collected on both days, as well as a sub-slab probe with the highest detection from previous sampling events in each room was selected for resampling to characterize the concentrations of target analytes to aid in interpreting the indoor air results. This included location AOC4-SS5 in Room IA6; AOC4-SS3 in Room IA4; AOC4-SS7 Room IA5B; and AOC4-SS12 in Room IA5A.

An additional round of indoor and outdoor air sampling was conducted in January 2019 to provide additional characterization during the winter season. The samples collected during the winter season event with the HVAC system on and at the same locations as the October 5 and 6 events. Additionally, air sampled were collected in the underground utility tunnel located to the west and south of the Industrial Arts Building.

The indoor air and outdoor background ambient air sampling locations are depicted on **Figure 4**.

2.4.4 Indoor/Outdoor Sampling Methodology and Procedures

For indoor air sampling in the classrooms, the windows and doors of the building were closed, and ingress / egress activities to the building were minimized.

- Personnel was onsite for the duration of the sampling event to document conditions during the sampling.
- The air inlet for the sampling Summas were located approximately 4 to 5 feet above the ground surface in the breathing zone. The indoor air samples were collected in the middle of each room, away from doors.
- Each sampling Summa container was equipped with a dedicated vacuum gauge and laboratory-calibrated flow regulator.

The outdoor air samples were collected in a location that was generally upwind of known subsurface plumes. Each outdoor air sampler was placed approximately 4 to 5 feet above the ground and was collected at the same time the indoor samples were collected. Current wind conditions were checked minutes prior to the start of the air sample collection and throughout each event, by using the weather data provided from nearby Van Nuys Airport, on the website https://www.windfinder.com/report/van_nuys_airport. The recorded wind directions are

presented in **Appendix B**. To the extent feasible, the outdoor air samples were located away from obvious chemical sources such as powered engines, trash areas, etc.

The air samples were collected directly into pre-cleaned, batch-certified, 6-liter, flow-controlled, evacuated Summa canisters. The laboratory provided flow controllers were pre-calibrated to collect the air samples at 12.5 milliliters per minute (mL/min) over an 8-hour period.

The collection of indoor air was initiated at each Summa canister at approximately the same time (within several minutes of each other). Each sample was finished when either the vacuum in the canister reached approximately 2 to 3 inches of mercury prior to 8 hours, or after eight hours from the sample start time.

Sub-Slab samples (at select locations) were collected directly into pre-cleaned, batch-certified, 1-liter, flow-controlled evacuated Summa canisters immediately after indoor air sampling was completed. The laboratory provided flow controllers were pre-calibrated to collect the air samples at 200 cc/min.

The initial and final vacuum in each canister was recorded on the CoC form and in the field log book. The completed CoC was sent with the air sample shipment to the laboratory.

2.4.5 Sample Analysis

The indoor air, outdoor air, and select sub-slab samples were collected and analyzed for selected VOCs using Environmental Protection Agency (EPA) Method TO-15. Analytical services were provided by Jones Environmental, Inc., with a laboratory accredited by the Environmental Laboratory Accreditation Program (ELAP) certified.

2.5 EQUIPMENT DECONTAMINATION

Down-hole equipment used during soil sampling activities was decontaminated prior to use at each sampling point to reduce the potential for cross-contamination. Reusable sampling equipment was decontaminated between each sampling event using the following procedures:

- Wash with Liquinox and brush to remove excess contaminants;
- Rinse with distilled water; and
- Rinse twice with distilled water.

2.6 INVESTIGATIVE DERIVED WASTE

Used personal protective equipment and disposable equipment was double-bagged and placed in the on-site dumpster. These wastes are not considered hazardous and were sent to a municipal landfill.

One 55-gallon drum of soil cuttings was generated during the field activities. The soil was temporarily stored on-site in the labeled Department of Transportation-approved drum pending disposal profiling. The drum was removed by Belshire Environmental Services, Inc. (BESI) on

November 9, 2018. The drums were disposed of at Soil Safe in Adelanto, California. Drum disposal documentation is provided in **Appendix C**.

2.7 BUILDING INVENTORY

A building inventory survey was conducted in accordance with DTSC's vapor intrusion guidance (DTSC, 2011). Indoor sources of contamination were identified and photographed prior to indoor air sampling. Each room was inspected, and products that contain volatile chemicals were listed on the Building Screening Form, along with the volatile ingredients of each product (**Appendix D**). A photoionization detector (PID) was used to measure total VOCs from areas where products were stored. There were no PID readings above background concentrations (i.e., 0.0 parts per million).

3.0 RESULTS

3.1 INTRODUCTION

This section discusses the results of the soil and soil vapor sampling. Soil samples were analyzed by TestAmerica Laboratories, Inc., an Environmental Laboratory Accreditation Program (ELAP)-certified laboratory located in Irvine, California. The soil gas mobile laboratory and fixed-laboratory samples were analyzed by Jones Environmental, Inc. The data were reviewed and are considered acceptable for decision-making purposes. Copies of soil analytical laboratory reports are provided in **Appendix E**, and soil gas and air sample analytical laboratory reports are provided in **Appendix F**.

3.2 SOIL ANALYTICAL RESULTS

Analytical results from the soil sampling during installation of probe locations AOC4-SV14 through AOC4-SV17 are summarized in the following sections. The results are discussed for compounds that were previously analyzed in soil. The polychlorinated biphenyls (PCBs), total petroleum hydrocarbons (TPH), and VOCs analytical data are compiled in **Tables 1 – 3, respectively,** and the soil sample locations are presented on **Figure 3**.

The samples were analyzed by TestAmerica using the following methods:

- PCBs by US EPA Method 8082
- TPH by US EPA Method 8015M
- VOCs by US EPA Method 8260B

3.2.1 PCBs

Eight primary and two duplicate soil samples were collected within AOC4 during the supplemental phase of work and analyzed for PCBs. The soil samples were collected during installation of soil vapor probes AOC4-SV14 through AOC4-SV17 at 5 and 15 ft bgs. PCBs were not detected above their respective laboratory reporting limits in any of the samples analyzed. Based on these results, PCBs are not considered a Site chemical of concern (COC). The PCB laboratory data results are provided in **Table 1.**

3.2.2 TPH

Eight primary and two duplicate soil samples were collected within AOC4 during the supplemental phase of work and analyzed for TPH in the gasoline range (GRO), diesel range (DRO), and oil range (ORO) organics. GRO was not detected above the laboratory reporting limit in the 10 samples analyzed. DRO was detected above the laboratory reporting limit in one sample analyzed (sample AOC4-SV17-5); the reported concentration was 3.5J (estimated value). ORO was detected above the method detection limit in 10 soil samples ranging in concentration from 3.2J milligrams per kilogram (mg/kg) (AOC4-SV16-15) to 10 mg/kg (AOC4-SV17-5). Detections of

ORO were below the San Francisco RWQCB RSL of 12,033 mg/kg (San Francisco Regional Board 2019). The analytical results are provided in **Table 2**. Based on these results, TPH is not considered a Site COC.

3.2.3 VOCs in Soil

Eight primary and two duplicate soil samples were collected within AOC4 during the supplemental phase of work and analyzed for VOCs. No VOC compounds were detected in soil above their respective reporting limits. The analytical results are provided in **Table 3**.

3.3 SOIL VAPOR SAMPLING RESULTS

3.3.1 VOCs in Soil Vapor Probes

Dual-nested soil vapor probes were installed at four new locations (AOC4-SV14 through AOC4-SV17) to further delineate tetrachloroethene (PCE) in soil vapor.

A total of 41 soil vapor samples, including duplicates, were collected from selected soil vapor probes as directed by LAUSD, on September 5 and 19 and October 9, 2018 and January 3, 2019. Some of the sampled probes were resample events to provide additional comparison data. The vapor samples were analyzed by Jones Environmental mobile or fixed laboratory for VOCs during each of the sample events. LAUSD OEHS requested that the current analytical data generated during the supplemental sampling and analyses be compared against the DTSC's future PSLs. PCE concentrations ranged from 1.7 micrograms per cubic meter ($\mu g/m^3$) (AOC4-SV17-5) to 1,440 $\mu g/m^3$ (AOC4-SV10-5). PCE was detected above the future PSL 15 $\mu g/m^3$ at 31 sample (either 5 or 15 ft bgs) locations. The future DTSC PSL for naphthalene is 2.8 $\mu g/m^3$. Naphthalene exceeded the future PSL concentration in five of the 41 samples, ranging from 3.0 $\mu g/m^3$ (AOC4-SV16-5) to 774 $\mu g/m^3$ (AOC4-SV8-15). Benzene exceeded the future PSL concentration (3.2 $\mu g/m^3$) in one (AOC4-SV8-15) of the 41 samples, at 7 $\mu g/m^3$. 1,2,4-Trimethylbenzene exceeded the future PSL concentration (2,100 $\mu g/m^3$) in one (AOC4-SV8-15) of the 41 samples, at 2,440 $\mu g/m^3$. Note that for benzene and naphthalene the non-detect values reported by the laboratory are the method detection limits; some of which exceed the future PSLs. No other VOCs were detected above their respective current PSLs. The analytical results are provided in **Table 4** and the soil vapor probe locations are presented on **Figure 3**.

3.3.2 VOCs in Sub-Slab Soil Vapor Pins

Three sub-slab soil vapor pins (AOC4-SS1 through AOC4-SS3) were installed prior to the supplemental assessment activities. For the supplemental assessment activities, sub-slab vapor pins AOC4-SS4 through AOC-SS12 were installed inside the Industrial Arts buildings, to evaluate PCE beneath the foundation slab. The vapor pin locations are depicted on **Figure 3**.

Between September 19, 2018 and January 3, 2019, 23 sub-slab vapor pins were sampled for soil vapor, including duplicate samples. The vapor samples were analyzed by Jones Environmental,

Inc. PCE concentrations in the sub-slab vapor pins sampled between September 15, 2018 and January 3, 2019 ranged from 18 µg/m^3 (AOC4-SS10) to 1,300 µg/m^3 (AOC4-SS3).

On October 5, 2018 one vapor pin in each of the four Industrial Arts building classrooms was sampled while the building HVAC system was in normal operating mode, and the same four vapor pins were then sampled the following day (October 6) while the HVAC system was in non-operating (off) mode. The four vapor pins (AOC4-SS3, AOC4-SS5, AOC4-SS7, and AOC4-SS12) were chosen to be sampled based on the relatively higher PCE concentrations observed during previous sampling events. The PCE concentrations in the four vapor pins results from October 5, 2018 ranged from 4 µg/m^3 (AOC4-SS5) to 373 µg/m^3 (AOC4-SS3). The PCE concentrations in the four vapor pins results from October 6, 2018 ranged from 9 µg/m^3 (AOC4-SS7) to 374 µg/m^3 (AOC4-SS3). The PCE concentrations in the four vapor pins results from the January 3, 2019 event ranged from 42.6 µg/m^3 (AOC4-SS5) to 245 µg/m^3 (AOC4-SS3). There did not appear to be a discernable PCE concentration trend correlating with the HVACs operational mode. PCE exceeded the future RSL (15 µg/m^3) in 21 of the 23 sub-slab vapor pin samples during the vapor sampling events. Benzene did not exceed the future RSL (3.2 µg/m^3) in any of the vapor pins sampled during the supplemental sampling events. Note that some of the benzene reporting limits were above the future RSL. This is not considered a likely potential risk, based on the number of samples with benzene reported, and the overall benzene concentrations of the samples. The sub-slab vapor pin laboratory results are tabulated in **Table 5.**

3.3.3 VOCs in Indoor and Outdoor Air

Twenty-three (23) indoor air samples IAS-1 through IAS-4 and outdoor air samples OAS-1 through OAS-3, including two duplicates were sampled on October 5 and 6, 2018, and on January 3, 2019. Additionally, two underground utility tunnel air samples (UT-1 and UT-2) were sampled on January 3, 2019. The indoor air and outdoor air samples, including the underground utility tunnel air samples results are provided on **Table 6**.

The indoor and outdoor air samples were collected to compare against the soil vapor data collected simultaneously from the Industrial Art building classrooms.

PCE was not detected above the residential PSL (0.46 µg/m^3) in any of the 23 indoor, outdoor, or underground utility tunnel air samples collected on any of the three sample dates.

On October 5, 2018, when the HVAC system was in normal operating mode, benzene concentrations in the four indoor air samples ranged from 0.44 µg/m^3 to 0.46 µg/m^3. Benzene concentrations in the three outdoor air samples ranged from 0.38 µg/m^3 to 0.43 µg/m^3. The benzene PSL for residential air is 0.097 µg/m^3. The essentially equal concentrations of benzene reported in the indoor and outdoor air samples indicate that benzene is associated with ambient sources and is not migrating from beneath the building foundations and accumulating in indoor air when the HVAC system is operating.

On October 6, 2018, when the HVAC system was in non-operating (off) mode, benzene concentrations in the four indoor air samples ranged from 0.78 µg/m^3 to 1.06 µg/m^3. Benzene

concentrations in the three outdoor air samples ranged from 0.35 µg/m^3 to 0.61 µg/m^3. The concentrations of benzene reported in the indoor air is slightly higher than the benzene concentrations in outdoor air samples, which could indicate benzene is migrating from beneath the building foundations and accumulating in indoor air. The slight difference in the benzene results may also be attributed to natural air flow variability inside and outside the rooms. However, benzene was not detected above the reporting limit in the sub-slab soil vapor samples collected during the same sample events, indicating that benzene detected in the indoor air samples is unlikely to have migrated from beneath the building foundation into indoor.

On January 3, 2019, when the HVAC system was in normal operating mode, benzene concentrations in the four indoor air samples ranged from 1.34 µg/m^3 (IAS-4) to 2.33 µg/m^3 (IAS-1). Benzene concentrations in the three outdoor air samples ranged from 1.56 µg/m^3 (OAS-3) to 1.85 µg/m^3 (OAS-1). The essentially equal concentrations of benzene reported in the indoor and outdoor air samples indicate that benzene is associated with ambient sources is not migrating from beneath the building foundations and accumulating in indoor air.

3.4 DELINEATION OF IMPACTS IN SOIL

For the supplemental scope of work, soil samples were collected during the installation of soil vapor probes AOC4-SV14 through AOC4-SV17, at 5 and 15 ft bgs. VOCs were not detected above their respective reporting limits in soil samples collected from the four vapor probe locations. VOCs in soil are considered laterally delineated to the west of the Industrial Arts buildings by the lack VOC concentrations in AOC4-SV16, and to the north by AOC4-SV17. **Table 3** provides VOC data from the soil samples collected.

There were no GRO detections in the soil samples above laboratory reporting limits, and only one DRO detection (low, estimated value) (3.5J mg/kg in sample AOC4-SV17 at 5 ft bgs). There were no ORO detections above 10 mg/kg in any of the soil samples analyzed. Note the San Francisco Regional Water Quality Control Board (2016) ORO screening level is 10,746 mg/kg. There were no PCB detections above their respective laboratory reporting limits in any of the soil samples collected from AOC4-SV14 through AOC4-SV17. Therefore, GRO, DRO and ORO (TPH) and PCBs are considered delineated to the west of the Industrial Arts buildings by the lack of TPH and PCB detections in AOC4-SV16, and to the north by AOC4-SV17. **Figure 3** depicts soil sampling locations.

The vertical extent of soil exceedances was defined by previous sampling (Parsons, 2018) and the 15 ft bgs sample analyses from soil vapor probes AOC4-SV14 through AOC4-SV17.

3.5 DELINEATION OF IMPACTS IN SOIL VAPOR

Based on the VOC results of soil vapor sample events between September 15, 2018 and January 3, 2019, the VOC-impacts in the Industrial Arts building area have been laterally delineated with respect to the overall soil vapor source. VOCs are considered delineated to the west of the Industrial Arts buildings by the relatively low VOC concentrations in AOC4-SV16 soil vapor, and

by the relatively low VOC concentrations in AOC4-SV17 soil vapor to the north. VOC concentrations are delineated by location AOC4-SV5 to the east. Soil vapor is delineated farthest south by soil vapor samples collected from AOC5-SV1 and AOC5-SV2. Soil vapor is not delineated at location AOC4-SV12 which south of the Industrial Arts building but north of the underground utility tunnel (**Figure 4**).

Naphthalene, ethylbenzene, and 1,2,4-trimethylbenzene were detected in soil vapor samples from probes AOC4-SV8 at 5 and 15 ft bgs during the September 15, 2018 event. Similar elevated concentrations of these compounds were not detected during the previous sample event (April 21, 2018) at AOC4-SV8 and have not been observed in any of the other soil vapor probes sampled during multiple events during the initial and supplemental scope of work. These two detections from the September 15, 2018 sample event are considered anomalous. **Table 4** provides the soil vapor probe sampling results and **Figure 3** provides the soil vapor sampling locations.

Specifically, PCE concentrations in soil vapor exceeded the future PSL (15 µg/m^3) at most of the soil vapor probes sampled during the supplemental scope of work. PCE concentrations in soil vapor were detected at or below the PSL in soil vapor probes AOC4-SV16 and AOC4-SV17, west and north of the Industrial Arts buildings. PCE in soil vapor at AOC4-SV5 east of the Industrial Arts buildings was at or below the future PSL. PCE in soil vapor at AOC4-SV12 south of the Industrial Arts buildings was below the current PSL but above the future PSL. The previously sampled AOC5-SV1 and AOC5-SV2 soil vapor probe data define VOCs to the south of the Industrial Arts buildings. **Figure 5** and **6** present iso-concentrations of PCE in the 5-ft bgs and 15-ft bgs soil vapor probes. To be conservative the highest detection was used at each probe location.

AOC4-SV14 and AOC4-SV15 were installed and sampled to correlate VOC concentrations in the shallow subsurface beneath the classrooms with VOCs in the nearby sub-slab vapor pin locations AOC4-SS6 and AOC4-SS9, respectively. VOCs are considered laterally delineated to the west of the Industrial Arts buildings by the lack VOC concentrations in AOC4-SV16, to the north by AOC4-SV17, and to the east by AOC4-SV5.

4.0 FIELD VARIANCES

Field conditions caused the following variances from the original scope of work:

- Sub-slab vapor pin AOC4-SS6 was unable to be purged or sampled due to no flow in the system.
- Soil vapor samples collected from locations AOC4-SV16 and AOC4-SV17 on October 9, 2018, were analyzed for VOCS by Method TO-15 which provided lower reporting and method detection limits compared to Method 8260.

5.0 HUMAN HEALTH SCREENING EVALUATION

This section presents the human health screening evaluation (HHSE) portion of the PEA-E. The HHSE evaluates potential impacts to human health from exposure to the chemicals detected in soil and soil vapor at the Site. Following the PEA Guidance Manual (DTSC, 2015a), the HHSE is performed within the context of a health risk assessment that addresses an unrestricted future residential land-use scenario, which is more health-protective than the existing and continued use of the Site as a school.

5.1 SOILS

Soil was sampled for PCBs (**Table 1**), TPH (**Table 2**), and VOCs (**Table 3**) during the supplemental investigation. All detections were below the PSLs. This indicates that potential future residential exposures to these chemicals in soils result in a residential risk estimate less than 1×10^{-6} and noncancer hazard quotient less than one, which is acceptable.

5.2 SOIL VAPOR/SUB-SLAB SOIL VAPOR/INDOOR AIR

In the soil vapor samples collected at the site, benzene, naphthalene, PCE, and 1,2,4-trimethylbeznene were detected at or above the future PSLs (see **Table 4**). Benzene, naphthalene, and PCE were also detected above the current PSLs. In the sub-slab soil vapor samples, only benzene and PCE were detected above the current and future PSLs (**Table 5**). In contrast, in both indoor and outdoor air, only benzene was detected above the PSLs (**Table 6**).

Benzene. Outside of the buildings at the site, benzene was detected above the future PSLs at 15-ft bgs at sample locations AOC4-SV8 and AOC4-SV12. However, benzene was not detected in the 5-ft bgs sample at the same locations. This likely indicates that benzene is degrading as it migrates through the soil column and that benzene in soil vapor at AOC4-SV8 and AOC4-SV12 does not represent a potential risk. However, benzene was also detected above the future PSLs in three sub-slab soil vapor samples at up to 64 times the current PSL. It should be noted that using the default DTSC (2011) and USEPA (2015) sub-slab soil vapor attenuation factors, the maximum detected sub-slab soil vapor benzene concentration of 209 $\mu g/m^3$ corresponds to indoor air concentrations of 10.45 and 6.27 $\mu g/m^3$, respectively. This is not substantially greater than the ambient concentrations at the two nearest Air Resources Board monitoring stations; i.e., Simi Valley (0.19 to 1.371 $\mu g/m^3$ for 2017) and Burbank (0.50 to 4.79 $\mu g/m^3$ for 2013). Lastly, it should be noted that benzene was measured in indoor and outdoor air in three separate sampling events at the site. In two events, benzene concentrations were roughly equivalent in the indoor and outdoor air samples but were not detected in the sub-slab samples. In the third event, benzene was slightly higher in the indoor air samples than in the outdoor air samples but was not detected in the sub-slab samples. Overall, benzene in soil vapor and sub-slab soil vapor at the Site does exceed the

future PSLs, but the concentrations of benzene in indoor air and outdoor air appear to be relatively similar, indicating that benzene does not represent a potential vapor intrusion issue.

Naphthalene. As stated in Section 3.5, the detection of naphthalene above the future PSLs in AOC4-SV8 is considered anomalous and is not evaluated in this risk assessment. Naphthalene also exceeded the future PSLs (but not current) at AOC4-SV16 and AOC4-SV17 at 5 and 15 ft bgs in the samples collected on October 9, 2018. However, naphthalene was also not detected in same probes in the samples collected on January 3, 2019. The detections in October 2018 were only slightly above the detection limits in January 2019; i.e., 3.0 to 4.0 $\mu g/m^3$ vs. 2.0 $\mu g/m^3$. Thus, naphthalene may have been present below the detection limit in the January 2019 samples. Using the future attenuation factors, these soil gas concentrations result in estimated indoor air concentrations of 0.09 to 0.12 $\mu g/m^3$ and a risk of approximately 1×10^{-6} for residential receptors. While the indoor and outdoor air samples were not analyzed for naphthalene, ambient concentrations in central Los Angeles, Rubidoux, and North Long Beach ranged from 0.03 to 0.73 $\mu g/m^3$ in 2003 to 2004 (SCAQMD 2008). As this ambient range exceeds the predicted indoor air concentrations, naphthalene in soil gas at the Site would not likely result in indoor air concentrations above ambient conditions and does not represent a potential vapor intrusion issue.

1,2,4-Trimethylbenzene. As stated in Section 3.5, the one detection of 1,2,4-trimethylbenzene above the future PSLs is considered anomalous and is not evaluated in this risk assessment.

Tetrachloroethene (PCE). In the sub-slab soil vapor samples, PCE was detected at up to 1,300 $\mu g/m^3$, which is 85 times the current (and more conservative) PSL. In the soil vapor probes installed outside of the buildings, PCE was detected at up to 1,440 $\mu g/m^3$, which is three times the current PSL but 94 times the future PSL. Using the default DTSC (2011) and USEPA (2015) sub-slab soil vapor attenuation factors, the maximum detected sub-slab soil vapor concentration of 1,300 $\mu g/m^3$ corresponds to indoor air concentrations of 65 and 39 $\mu g/m^3$, respectively. These concentrations are substantially greater than the ambient concentrations at the two nearest Air Resources Board monitoring stations; i.e., Simi Valley (0.034 to 0.20 $\mu g/m^3$ for 2017) and Burbank (0.14 to 1.15 $\mu g/m^3$ for 2013). Due to the potential risks from PCE, three indoor and outdoor air sampling events were conducted at the Site. While PCE was detected in almost all indoor air samples, all of the results were below the residential PSL, both with the HVAC system on and with it off. Thus, even under worst-case conditions (i.e., HVAC off, which reduces the dilution of indoor air with outdoor air), exposures to PCE in indoor air result in a residential risk estimate less than 1×10^{-6} and noncancer hazard quotient less than one, which is acceptable. It should be acknowledged, however, that while the current building appears to limit vapor intrusion by PCE, the concentrations are high enough in sub-slab soil gas that there is still a potential for concern if there is new building construction and the existing building is replaced.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 CONCLUSIONS

The following conclusions were derived from the supplemental investigation conducted at Reseda High School for soil, soil vapor and indoor air. Previous recommendations regarding the presence of lead and arsenic in soil above their respective PSLs are documented in the PEA-E Report (Parsons, 2018a).

Soil

- Soil was sampled for PCBs, TPH, and VOCs during the supplemental investigation in AOC4. There were no detections above the PSLs, which is consistent with the original investigation results (Parsons, 2018a). Therefore, PCBs, TPH, and VOCs are not considered COCs in soil.

Soil Vapor

- A total of 41 soil vapor samples, including duplicates, were collected from selected soil vapor probes during the supplemental investigation on September 5 and 19, October 9, 2018 and January 3, 2019 to further characterize soil vapor concentrations in AOC4. Select probes were sampled in multiple events to provide additional data for decision-making purposes. LAUSD OEHS requested that the analytical data now be compared against the DTSC's future PSLs. PCE was detected above the future PSL (15 µg/m^3) at 31 sample (either 5 or 15 ft bgs) locations. In the 41 vapor samples, PCE concentrations ranged from 1.7 µg/m^3 (AOC4-SV17-5) to 1,440 µg/m^3 (AOC4-SV10-5). The future PSL for naphthalene is 2.8 µg/m^3. Naphthalene exceeded the future PSL concentration in five of the 41 samples, ranging from 3.0 µg/m^3 (AOC4-SV16-5) to 774 µg/m^3 (AOC4-SV8-15). 1,2,4-trimethylbenzene exceeded the future PSL concentration (2,100 µg/m^3) in one (AOC4-SV8-15) of the 41 samples, at 2,440 µg/m^3. Benzene exceeded the future PSL concentration (3.2 µg/m^3) in one (AOC4-SV8-15) of the 41 samples, at 7 µg/m^3. Note that for benzene and naphthalene the non-detect values reported by the laboratory are the method detection limits; some of which exceed the future PSLs. No other VOCs were detected above their respective PSLs.
- Based on the multiple soil vapor sampling events from previously installed and more recently installed soil vapor probes, vapor-phase VOCs are considered laterally delineated but not vertically delineated (**Figures 5 and 6**). VOCs, including PCE (the most prevalent compound of concern), was detected above the future PSLs in soil vapor at 5- and 15-ft bgs at probe locations in many of the previously installed soil vapor probe locations (AOC4-SV1 through AOC4-SV13) and in the soil vapor probe locations AOC4-SV13 through AOC4-SV15 installed for the supplemental investigation.
- Several soil vapor probes had reported concentrations of naphthalene and 1,2,4-trimethylbenzene above their respective future PSL. As discussed in Section 3.5, these

two compounds have not been observed in any of the other soil vapor probes sampled during multiple events during the initial and supplemental scope of work. Given the sporadic and isolated nature of these detections they are not considered Site COCs.

- On September 15 and 19, 2018, 12 sub-slab vapor pins were sampled for soil vapor. PCE concentrations in the sub-slab vapor pins sampled on September 15 and 19, 2018 ranged from 18 µg/m^3 (AOC4-SS10) to 1,300 µg /m^3 (AOC4-SS-3). Based on PCE concentrations exceeding the sub-slab PSLs, indoor and outdoor air sampling was conducted to further assess vapor intrusion potential to indoor air.
- Benzene was detected at concentrations above the future PSLs at various soil vapor probes and sub-slab probes during the initial investigation (May 2018 event). Subsequent sampling of these and additional probes conducted during supplemental investigation did not confirm the continued presence of benzene in soil vapor probes and sub-slab probes. Based on the benzene detections during the initial investigation it is considered a Site COC.

Indoor Air

During the supplemental investigation, three indoor and outdoor air sampling events were conducted using Summa canisters. For each event, three outdoor air samples and four indoor air samples were collected. These samples were collected concurrent with selected sub-slab vapor pins to help interpret the origin of any indoor air VOC detections.

- PCE was not detected above the residential PSL (0.46 µg/m^3) in any of the 23 indoor, outdoor, or underground utility tunnel air samples collected on any of the three sample dates. Low concentrations of PCE were detected with the HVAC system on and with it off. Thus, even under worst-case conditions (i.e., HVAC off, which reduces the dilution of indoor air with outdoor air), exposures to PCE in indoor air result in a residential risk estimate less than 1 x 10^{-6} and noncancer hazard quotient less than one, which is acceptable. Although PCE concentrations are below the PSL in indoor air, the sub-slab concentrations are high enough that there is still a potential for concern if the existing building is replaced by a new building.
- As discussed in Section 5.2, benzene in soil vapor and sub-slab soil vapor at the Site does exceed the future PSLs, but the concentrations of benzene in indoor air and outdoor air appear to be relatively similar, indicating that benzene does not represent a potential vapor intrusion issue.

6.2 RECOMMENDATIONS

The following are recommendations based on the above conclusions:

- A Removal Action Workplan (RAW) should be developed for the Site to address PCE and benzene soil vapor impacts above the future PSLs, as well as to address previously identified (Parsons, 2018a) shallow soils impacted with lead and/or arsenic above their PSLs.

Value Exceeds Screening Level

PSL = Preliminary Screening Level; i.e., DTSC (2018) residential SLs, as supplemented by USEPA (2018) residential RSLs

Current PSL is residential air PSL divided by DTSC (2011) default attenuation factor of 0.001 for a future residential building

Future PSL is residential air PSL divided by USEPA (2015) default attenuation factor of 0.03

Value Exceeds Screening Level

Derivation of the screening levels is explained in text.

NS - unable to obtain sample due to no flow in probe

NR - analyte not reported.

* - tracer gas detected in sample

PSL = Preliminary Screening Level; i.e., DTSC (2018) residential SLs, as supplemented by USEPA (2018) residential RSLs

Current PSL is residential air PSL divided by DTSC (2011) default attenuation factor of 0.05 residential sub-slab samples

Future PSL is residential air PSL divided by USEPA (2015) default attenuation factor of 0.03

No additional comments.

Receipt
The samples were received on 9/10/2018 1:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.1º C.

Receipt Exceptions
TB (440-219730-7) was listed on COC but was crossed out. The lab did receive this sample, and logged it in as Hold.

GC/MS VOA
Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 440-498992 recovered outside control limits for Bromoform. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
Method(s) 8015B: Surrogate recoveries for the following samples were outside control limits: AOC4-SV14-5 (440-219730-4) and AOC4-SV14-15 (440-219730-5). Re-analysis was performed with concurring results. The re-analysis results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-498584 and analytical batch 440-498686. The laboratory control sample (LCS) was performed in duplicate to provide precision data for the batch.

Method(s) 8015B: The method blank for preparation batch 440-498978 and analytical batch 440-499059 contained C23-C40 above the method detection limit (MDL). This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-219730-1

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015B		Solid	GRO (C4-C12)
8015B		Water	GRO (C4-C12)
8015B	3510C	Water	DRO (C13-C22)
8015B	3510C	Water	ORO (C23-C40)
8015B	3546	Solid	DRO (C13-C22)
8015B	3546	Solid	ORO (C23-C40)
8260B		Water	m,p-Xylene
8260B	5035	Solid	m,p-Xylene

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 10/6/2018 2:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.4° C.

GC/MS VOA
No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-504060 and analytical batch 440-504496. The laboratory control sample (LCS) was performed in duplicate to provide precision data for the batch.

Method(s) 8082: Surrogate recovery for the following sample was outside control limits: AOC4-SV17-5 (440-221644-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8082: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-503698 and analytical batch 440-504021. The laboratory control sample (LCS) was performed in duplicate to provide precision data for the batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: LAUSD Reseda H.S., CA

TestAmerica Job ID: 440-221644-1

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

SAMPLING METHODOLOGY & LABORATORY RESULTS

Client:	Parsons	**Report date:**	10/7/2018
Client Address:	100 W. Walnut Street Pasadena, CA 91124	**JEL Ref. No.:** **Client Ref. No.:**	ST-12769 450810
Attn:	Justin King	**Date Sampled:**	10/5/2018
		Date Received:	10/6/2018
Project Name:	Reseda High School	**Date Analyzed:**	10/6-7/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Indoor Air

ANALYSES REQUESTED

1. EPA TO-15 – Volatile Organics by GC/MS

Sampling – Indoor Air samples were collected in 6 Liter SUMMA Canisters over an 8-hour period.

Analytical – Indoor Air samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCV) and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verification Duplicate (CCVD) was analyzed with each batch of Soil Gas samples.

Approval:

Angela Haar, Ph. D.
Mobile Lab Manager

SAMPLING METHODOLOGY & LABORATORY RESULTS

Client:	Parsons	**Report date:**	10/8/2018
Client Address:	100 W. Walnut Street Pasadena, CA 91124	**JEL Ref. No.:** **Client Ref. No.:**	ST-12770 450810
Attn:	Justin King	**Date Sampled:**	10/6/2018
		Date Received:	10/6/2018
Project Name:	Reseda High School	**Date Analyzed:**	10/6-8/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Indoor Air

ANALYSES REQUESTED

1. EPA TO-15 – Volatile Organics by GC/MS

Sampling – Indoor Air samples were collected in 6 Liter SUMMA Canisters over an 8-hour period.

Analytical – Indoor Air samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCV) and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verification Duplicate (CCVD) was analyzed with each batch of Soil Gas samples.

		Date Received:	10/6/2018
Project Name:	Reseda High School	**Date Analyzed:**	10/7/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS

Sampling – Soil Gas samples were collected in 1 Liter SUMMA canisters.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples.

SAMPLING METHODOLOGY & LABORATORY RESULTS

Client:	Parsons	**Report date:**	10/8/2018
Client Address:	100 W. Walnut Street Pasadena, CA 91124	**JEL Ref. No.:** **Client Ref. No.:**	ST-12772 450810
Attn:	Justin King	**Date Sampled:** **Date Received:**	10/5/2018 10/6/2018
Project Name:	Reseda High School	**Date Analyzed:**	10/7/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS

Sampling – Soil Gas samples were collected 1 Liter SUMMA canisters.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples.

ANALYSES REQUESTED

1. EPA TO-15 – Volatile Organics by GC/MS

Sampling – Soil Gas samples were collected in 1-Liter SUMMA Canisters.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the TO-15 analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except if noted differently on the chain of custody record. Purging was done using a pump set at approximately 200 cc/min, except if noted differently on the chain of custody record. 3 purge volumes were used. (A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.)

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for some length of time. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

Analytical – Soil Gas samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCV) and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verification Duplicate (CCVD) was analyzed with each batch of Soil Gas samples.

ANALYSES REQUESTED

1. EPA TO-15 – Volatile Organics by GC/MS

Analytical – Indoor Air samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification (CCV) and Instrument Blanks (MB) were analyzed every 24 hours as prescribed by the method. In addition, a Continuing Calibration Verification Duplicate (CCVD) was analyzed with each batch of Indoor Air samples.

LABORATORY RESULTS

Client:	Parsons	**Report date:**	9/15/2018
Client Address:	100 West Walnut Street Pasadena, CA 91124	**JEL Ref. No.:** **Client Ref. No.:**	D-1525 450810
Attn:	Justin King	**Date Sampled:** **Date Received:**	9/15/2018 9/15/2018
Project Name:	Reseda High School PEA	**Date Analyzed:**	9/15/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

LABORATORY RESULTS

Client:	Parsons	**Report date:**	9/19/2018
Client Address:	100 West Walnut Street Pasadena, CA 91124	**JEL Ref. No.:** **Client Ref. No.:**	E-0915 450810
Attn:	Justin King	**Date Sampled:** **Date Received:**	9/19/2018 9/19/2018
Project Name:	Reseda High School PEA	**Date Analyzed:**	9/19/2018
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates/Gasoline Range Organics

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Angela Haar, Ph. D.
Mobile Lab Manager

LABORATORY RESULTS

Client:	Parsons	**Report date:**	10/16/2018
Client Address:	100 W. Walnut Street Reseda, CA 91335	**JEL Ref. No.:**	ST-12784
Attn:	Justin King	**Date Sampled:**	10/9/2018
		Date Received:	10/9/2018
Project:	Reseda High School	**Date Analyzed:**	10/15/2018
Project Address:	18230 Kittridge Street Reseda High School	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA TO-15 – Volatile Organics by GC/MS

Analytical – Indoor Air samples were analyzed using EPA Method TO-15. Instrument Continuing Calibration Verification, QC Reference Standards, and Instrument Blanks were analyzed every 24 hours as prescribed by the method. In addition, a Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were analyzed with each batch of Indoor Air samples.

Approval:

Colby Wakeman
QA/QC Manager

Soil-Gas Chain of Custody Record

Client: Parsons
Project Name: Reseda High School
Project Address: 18230 Kittridge St
Reseda CA 91335
Email:
Phone:
Report To:
Sampler: Colby

Date: Oct 9 2018
Client Project #:

Purge Number: ☐ 1P ☒ 3P ☐ 7P ☐ 10P
Shut-In Test: (Y) N
Flow Rate: 200
If different than above, see Notes.

Turn Around Requested:
- ☐ Immediate Attention
- ☐ Rush 24 Hours
- ☐ Rush 48 Hours
- ☐ Rush 72 Hours
- ☒ Normal
- ☐ Mobile Lab

Tracer:
- ☑ n-pentane
- ☑ n-hexane
- ☑ n-heptane
- ☐ Helium
- ☐ 1,1-DFA
- ☐ _____

Reporting Limits Requested: ☐ Commercial ☐ Residential

Units:

LABORATORY RESULTS

Client:	Parsons	**Report date:**	1/7/2019
Client Address:	100 W. Walnut Street Pasadena, CA 91124	**JEL Ref. No.:**	ST-13162
Attn:	Justin King	**Date Sampled:**	1/3/2019
		Date Received:	1/3/2019
Project Name:	Reseda High School PEA	**Date Analyzed:**	1/4/2019
Project Address:	18230 Kittridge Street Reseda, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in 1 Liter SUMMA Canisters.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

Analytical – Soil Gas samples were analyzed using EPA Method 8260B that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples.

Approval:

Angela Haar, Ph. D.
Mobile Lab Manager

APPENDIX A: FIELD REVIEW SHEETS
APPENDIX B: WALK AUDIT SHEETS
APPENDIX C: SELECTED PHOTOS
APPENDIX D: ADDITIONAL INFORMATION

1.0 INTRODUCTION

The purpose of this report is to document existing conditions at Reseda Charter High School (Reseda HS), located at 18230 Kittridge Street in the Los Angeles Unified School District's (LAUSD's) Local District Northwest in the San Fernando Valley community of Reseda, in the City of Los Angeles. This report summarizes existing conditions, including circulation operations, for use in the facilities planning and design process for the Reseda HS Comprehensive Modernization Project.

Observations include conditions and operations at adjacent intersections and roadway segments, internal parking lots, and identified or reported issues. Other existing conditions recorded are general vehicular travel (including pick-up/drop-off operations), school bus, parking, transit, pedestrian, and bicycle activity. To aid this process, a safety audit (with an emphasis on walking) was performed. The audit encompasses positive and negative site circulation attributes observed during field visits from a professional civil engineering perspective. Walkability, accessibility, visibility, and safety of pedestrians and bicyclists around the perimeter of the school are some of the major site circulation elements that were evaluated in the audit. A follow-up interview regarding access, egress, and circulation at the campus was conducted with Reseda HS administration, including Principal Melanie Welsh, on June 6, 2018.

This report concludes with observed vehicle and pedestrian circulation issues both on and off-site and offers potential opportunities for improvements to site access and/or onsite circulation that can be explored further in the facilities planning process for the Reseda HS Comprehensive Modernization Project, as well as other future projects. ***Appendix A*** includes notes from the field review conducted on May 24, 2018, and ***Appendix B*** includes notes from the walk audits conducted on the same date. Selected photos depicting conditions described in this report are included in ***Appendix C***. ***Appendix D*** provides additional information on circulation, such as traffic counts on record.

1.1 School and Neighborhood Description

Reseda HS is an Affiliated Charter school that operates as part of the LAUSD. The Reseda HS campus is located in the San Fernando Valley community of Reseda, within the City of Los Angeles. Reseda HS first opened its doors to students in 1955. Reseda HS, through open enrollment and magnet programs, attracts many students from outside the geographical service

area. Per the school's 2017-2018 Single Plan for Student Achievement (SPSA),[1] Reseda HS serves a total of 1,540 students from grades 9 to 12, and enrollment has decreased since 2004 when 2,900 students were enrolled. 108 faculty and staff work at Reseda HS. A regular school day has a morning bell at 8:00 am and afternoon bell at 3:06 pm.

School administration indicated that Reseda HS has a very large special education program for students, including those students requiring physical support assistance, with 55 faculty and staff dedicated solely to these students. Most of the special education classes are held on the south side of the service road in portable classrooms.

Within and adjacent to the Reseda HS campus, two other small schools operate:

MAGNOLIA SCIENCE ACADEMY 5

Magnolia Science Academy 5 is a non-profit private charter school that is not affiliated with LAUSD and leases property for 6th through 10th grade classrooms within the Reseda HS campus. According to the school's website, the school served 210 students in the 2017-2018 academic school year. Magnolia Science Academy 5 has similar drop-off and pick-up locations, and approximately the same start and end times as Reseda HS.

ZANE GREY CONTINUATION HIGH SCHOOL

Zane Grey Continuation High School is an Educational Options school[2] that currently serves grades 9 through 12. It is located immediately west of the south baseball field. According to the 2017-2018 SPSA, their student enrollment varies from 100 to 300 students depending on the district's needs. Zane Grey Continuation High School has similar drop-off and pick-up locations, and approximately the same start and end times as Reseda HS, which causes congestion.

2.0 TRANSPORTION NETWORK

2.1 Streets and Intersections

The Reseda HS main campus is generally bounded by Victory Boulevard to the south, Lindley Avenue to the east, Kittridge Street to the north, and Etiwanda Avenue to the west. The main campus gates are located on Kittridge Street between Nestle Avenue and Wynne Avenue, with the main faculty and administration parking lot accessible from Kittridge Street and two other smaller faculty and administration parking lots accessible from Etiwanda Avenue. The student

[1] *Los Angeles Unified School District. Single Plan for Student Achievement (California: Los Angeles, 2017-2018), 9-10.*
[2] https://achieve.lausd.net/domain/159.

parking lot is accessible via two gated entrances on Lindley Avenue and a gated entrance on Victory Boulevard. Roadway characteristics, including roadway classification identified in the City of Los Angeles *Mobility Plan 2035*,[3] for study area roadways are provided below.

STUDY AREA ROADWAYS

Victory Boulevard is an east-west roadway classified as a Boulevard II with three travel lanes in each direction. The posted speed limit is 45 mph within the school zone, which is defined as a roadway segment adjacent to or surrounding school grounds, and 25 mph when children are present in accordance with Section 22352 of the California Vehicle Code. Speed feedback signs are provided for both eastbound and westbound traffic. No stopping or parking is permitted any time on both sides of the street.

Lindley Avenue is a north-south roadway classified as an Avenue II with two travel lanes in each direction. The posted speed limit is 35 mph within the school zone, and 25 mph when children are present in accordance with Section 22352 of the California Vehicle Code. There is no parking on Mondays between 8:00 am to 11:00 am for street sweeping on the east side of the street and between 7:00 am to 5:00 pm during school days, with the exception of school buses, on the west side of the street.

Kittridge Street is an east-west roadway classified as a Collector street with one travel lane in each direction. The posted speed limit is 30 mph within the school zone, and 25 mph when children are present in accordance with Section 22352 of the California Vehicle Code. There is no parking on Mondays between 8:00 am to 11:00 am for street cleaning on the north side of the street and between 7:00 am to 5:00 pm during school days on the south side of the street.

Etiwanda Avenue is a north-south roadway classified as a Local street with one travel lane in each direction. Etiwanda Avenue dead-ends in a cul-de-sac south of Kittridge Street at the Los Angeles River. There is no posted speed limit, but a school sign is posted approximately 200 feet north of Kittridge Street in accordance with Section 22352 of the California Vehicle Code. There is no parking between 4:00 am and 6:30 am Monday through Friday on both sides of the street. There is no parking (red curb) at the end of the cul-de-sac.

STUDY AREA INTERSECTIONS

Lindley Avenue and Victory Boulevard is a signalized intersection operating under semi-actuated signal phasing with Victory Boulevard as the coordinated street. The intersection has

[3] *Los Angeles Department of City Planning. Mobility Plan 2035 (California: Los Angeles, 2016)*

permissive left turns for all approaches. Pedestrian phase recall occurs along both streets, with all approaches having marked crosswalks.

Lindley Avenue and Kittridge Street is a signalized intersection operating under semi-actuated signal phasing with Lindley Avenue as the coordinated street. The intersection has permissive left turns for all approaches. Pedestrian phase recall occurs along Kittridge Street, with all approaches having crosswalks, including a high-visibility crosswalk (i.e., ladder striping) on the north leg.

Chimineas Avenue and Kittridge Street is an unsignalized intersection with stop control on Chimineas Avenue.

Wynne Avenue and Kittridge Street is an unsignalized intersection with stop control on all movements.

Nestle Avenue and Kittridge Street is an unsignalized intersection with stop control on Nestle Avenue.

Etiwanda Avenue and Kittridge Street is an unsignalized intersection with stop control on all movements. All approaches have marked crosswalks.

Specific characteristics of each intersection, including lane configurations, can be found in ***Appendix A***.

2.2 Transit

Metro is the only transit operator that provides public transit access to Reseda HS. Bus transit stops and services (operators and routes) provided adjacent to Reseda HS are as follows:

- Victory Boulevard
    - Northwest corner of Lindley Avenue and Victory Boulevard
        - Metro 164 (westbound)
    - Southwest corner of Lindley Avenue and Victory Boulevard
        - Metro 164 (eastbound)

Metro Local Route 164 operates seven days a week between Burbank and West Hills via Victory Boulevard.

School administration noted that very few students, faculty, and staff use Metro buses.

2.3 Bicycle and Pedestrian Facilities

There are no exclusive bicycle lanes located within the school zone, with bicyclists sharing the sidewalk with pedestrians, or the roadway with vehicles.

Sidewalks exist on both sides of Victory Boulevard, Lindley Avenue, Kittridge Street, and Etiwanda Avenue within the school zone. The concrete sidewalks on the east side of Lindley Avenue and north side of Kittridge Street are separated from vehicular traffic by a landscaped buffer, with regular gaps provided for tree planters. Per the City of Los Angeles, Mobility Plan 2035, Kittridge Street, Lindley Avenue, and Etiwanda Avenue are designated as part of the Neighborhood Enhanced Network.

A pedestrian bridge crossing the Los Angeles River at the south end of Etiwanda Avenue provides access between Reseda Park and the Reseda HS campus. However, school administration noted that students avoid using this bridge due to personal safety concerns. In addition, the administration stated that there has been recurring criminal activity at the adjacent park (Reseda Park).

Bicycle racks and skateboard racks are provided near the main entrance gate of the campus; during the field visit, the bicycle racks had an approximately 75% utilization rate while the skateboard racks had less than a 25% utilization rate. School administration stated that between 30 and 40 bicycles are parked on a daily basis at the racks in front of the school, and about 50 skateboards are either locked at the racks or checked in at the front desk every day.

2.4 Parks and Other Recreational Facilities

Reseda Park is located directly west of Reseda HS and extends across the Los Angeles River near the southwest corner of the Reseda HS campus. It is accessible by a pedestrian bridge across the Los Angeles River.

The Sepulveda Basin Recreation Area is 0.5 miles walking east of the Reseda HS campus.

2.5 Congestion Locations

During the morning drop-off period, queues were observed for all approaches at the intersection of Etiwanda Avenue and Kittridge Street. Queues of approximately 125 feet to 175 feet were observed for the northbound, eastbound, and westbound approaches, and a queue up to approximately 375 feet was observed for the southbound approach, primarily due to students crossing along the intersection. Queues were also observed at the intersection of Lindley

Avenue and Kittridge Street. A queue of approximately 150 feet was observed for both the northbound and southbound left turn movements from Lindley Avenue to Kittridge Street due to the left turn permissive phasing. On eastbound Kittridge Street, a queue of approximately 175 feet was observed for through and right turn movements and a queue of approximately 150 feet was observed for the left turn movement onto Lindley Avenue due to the left turn permissive phasing.

During the afternoon pick-up period, queues were observed on northbound Etiwanda Avenue from the cul-de-sac to Kittridge Street. This was due, primarily, to parents double-parking, parents exiting curb parking, and pedestrians crossing mid-block. Queues of approximately 125 feet, 150 feet, and 250 feet were observed for the eastbound, southbound, and northbound approaches, respectively, at the intersection of Etiwanda Avenue and Kittridge Street due to the high pedestrian volume crossing the intersection. A queue of approximately 100 feet was also observed on eastbound Kittridge Street at Chimineas Avenue due to pedestrians crossing Chimineas Avenue, blocking the eastbound left turn movement. Lastly, queues of approximately 75 feet for all directions were observed in the main faculty and staff parking lot, located near the northeast corner of the school campus, due to pedestrians walking within the parking lot and crossing the parking lot driveway on the south side of Kittridge Street. Pedestrians consequentially block vehicle movement within the parking lot and through the parking lot driveway.

Appendix D contains traffic counts that were obtained from the City of Los Angeles Department of Transportation (LADOT) *NavigateLA* database.

Per school administration, at Magnolia Science Academy 5 students walk in, or are dropped off at the southern Etiwanda gate, which causes significant congestion and pedestrian-vehicle conflicts at the cul-de-sac and service road. This leads to severe congestion for southbound vehicles turning around to drive northbound and affects the ability of buses to enter the site to pick-up and drop-off students with disabilities.

School administration also noted that they have received numerous complaints from the neighborhood regarding parking, circulation, and congestion issues before morning bell and after dismissal.

3.0 SCHOOL OPERATIONS

3.1 Parking

At the Reseda HS main campus, there are a total of five parking lots, consisting of one main faculty lot, three internal faculty lots, and one student lot. The main faculty and staff parking lot, located in the northeast corner of the school campus, contains 53 marked spaces with 1 accessible and 1 van-accessible spaces. This parking lot can be accessed via a gated entrance on Kittridge Street, 300 feet west of Lindley Avenue. The parking lot gate is closed and locked during school hours.

The faculty and staff parking lot located in the southeast side of Etiwanda Avenue and Kittridge Street contains 30 marked spaces with 1 accessible and 2 van-accessible spaces. This parking lot can be accessed via a gated entrance on Etiwanda Avenue 125 feet south of Kittridge Street. The parking lot gate is closed and locked during school hours.

The faculty and staff parking lot located in the southwest corner of the school campus contains 23 marked spaces with 1 van-accessible spaces. The faculty and staff parking lot located on the south side of campus contains 33 marked spaces with 2 van-accessible spaces. Both parking lots can be accessed via a gated entrance on Etiwanda Avenue near the cul-de-sac. The parking lot gate is closed and locked during school hours.

The student parking lot, which is located in the southeast corner of the school campus near the intersection of Lindley Avenue and Victory Boulevard, contains 154 marked spaces with 4 accessible and 2 van-accessible spaces. This parking lot can be accessed via two gated entrances on Lindley Avenue and a gated entrance on Victory Boulevard. The parking lots gates are closed during school hours. School administration stated that very few students drive to or from campus.

During the field visit, it was noted that the parking utilization at the main faculty lot was 75% to 95%. The faculty and staff parking lot southeast of the intersection of Etiwanda Avenue and Kittridge Street was more than 95% utilized with 5 vehicles parked in unmarked areas. The faculty and staff parking lot located at the southwest corner of Reseda HS was more than 95% utilized with 11 vehicles parked in unmarked areas along the east side of the parking lot and in accessible marked areas. The faculty and staff parking lot on the south side of campus was 100% utilized with 17 vehicles parked in unmarked areas and no parking zones. Lastly, the student lot located on the southeast corner of campus was 25% to 50% utilized.

3.2 Circulation

There are no designated or signed student pick-up/drop-off areas around Reseda HS. However, the main areas observed to be used for student pick-up/drop-off are along Etiwanda Avenue and Kittridge Street, where vehicles park along the curb. This creates a long queue for vehicles trying to pick-up or drop-off students along both streets due to parents double-parking, vehicles exiting curb parking, and student pedestrians crossing mid-block. During the morning bell period, queues were observed at the intersection of Etiwanda Avenue and Kittridge Street and Lindley Avenue and Kittridge Street. Students were also observed to be dropped-off on neighboring streets north of Kittridge Street. School buses were seen to travel to Kittridge Street from eastbound Kittridge Street and southbound Etiwanda Avenue. School buses and vehicles drop-off students on the south side of Kittridge Street. During the afternoon bell period, queues on Kittridge Street extend from Etiwanda Avenue to Wynne Avenue and queues on Etiwanda Avenue extend from the end of the cul-de-sac to Kittridge Street. During the field visit for both the morning and afternoon, vehicles were observed to park along the cul-de-sac making it difficult for other vehicles to make U-turns, creating a much longer queue on Etiwanda Avenue. In addition, after dropping off or picking up students, vehicles were observed continuing eastbound and turning left onto Chimineas Avenue. Because Chimineas Avenue continues north to Vanowen Street, it appears some vehicles are cutting through on this route to avoid longer delays at the intersection of Kittridge Street and Lindley Avenue.

High volumes of vehicles exiting parking lots create delays to the vehicle flow on Kittridge Street and conflicts with pedestrians, especially for the main faculty and staff lot located at the northeast corner of campus. School buses for students with disabilities pickup and drop-off along the service road within the faculty and staff parking lot on the south side of campus. These buses enter the parking lot on Etiwanda Avenue, proceed eastbound, turn northbound along the service road, and exit onto Kittridge Street. During the field visit, school buses and other vehicles were observed to experience difficulty exiting the parking lot due to vehicles parking along red curbs blocking their line of sight.

As for pedestrian circulation, students exit through all of the parking lot gates and the main entrance gate in front of the campus. A high volume of pedestrians was observed at the intersections of Etiwanda Avenue and Kittridge Street and at the intersection of Lindley Avenue and Kittridge Street. Some students were also observed to cross mid-block on Etiwanda Avenue and Kittridge Street. Students also use the pedestrian bridge to cross the Los Angeles River, which creates conflicts with vehicles making U-turns at the cul-de-sac. Students crossing

parking lot driveways were also observed conflicting with vehicles exiting parking lots. Few students were observed using public transportation along Victory Boulevard.

School administration indicated that most vehicles approach Kittridge Street from the north, via Wilbur Avenue, Reseda Boulevard, or Lindley Avenue. Vehicles from the south or east are heavily influenced by the two major freeways nearby. For the US 101 Freeway, drivers tend to use Lindley Avenue to White Oak Avenue. For the I-405 Freeway, drivers tend to use Sherman Way or Vanowen Street, and tend to avoid using Victory Boulevard due to congestion.

3.3 Crash History

Crash data used for the Vision Zero project was extracted within the Reseda HS school zone[4]. Between 2013 and 2016, a total of 60 crashes occurred. Forty-nine of these crashes were near the intersection of Lindley Avenue and Victory Boulevard, including one vehicle and bicycle collision that did not result in severe injury and two broadside collisions that resulted in severe injury. These collisions do not appear to be directly related to Reseda HS as the main loading/unloading zones are along Kittridge Street and Etiwanda Avenue. Seven of the total crashes occurred near the intersection of Lindley Avenue and Kittridge Street, including two vehicle and bicycle collisions that occurred at the intersection which resulted in visible injury. Four crashes occurred along Kittridge Street, of which three were rear-end collisions and one head-on collision. No fatalities were recorded.

Based on the available data, two discernible collision patterns were noted. The three vehicle and bicycle collisions that occurred within the school zone may be partly due to the fact that there are no designated bicycle facilities on roadways adjacent to Reseda HS; therefore, bicyclists share the road with vehicles and crosswalk with pedestrians. The four collisions that occurred along Kittridge Street may be partly due to roadways that are not wide enough to accommodate two-way traffic and parking on both of sides of the street.

4.0 DEFICIENCIES AND OPPORTUNITIES

4.1 Walk Audit Observations

Internal circulation within the Reseda HS campus appears relatively efficient. Most buildings are located close together and accessible paths of travel appear to be planned out effectively. Staff noted that students enrolled in the special education program generally had little need to enter

[4] http://visionzero.geohub.lacity.org/

onto the main campus, which results in few students needing to cross the service road internally. However, parked vehicles have the ability to travel freely in either direction along the service road, since this road does not have an internal gate. In one location, it appeared that a minor desire line had been formed through landscaping south of the auditorium, indicating a desired path of travel. However, this path was relatively small and may not indicate a major need.

The following off-site deficiencies were observed during the external walk audit conducted on May 24, 2018 within the school perimeter: :

- Lindley Avenue
    - Street lighting is not provided on the east side of Lindley Avenue; pedestrian visibility may be limited during early-morning and late-evening, especially during winter months.
    - Uneven sidewalk surface on the west side of Lindley Avenue 75 feet north of Kittridge Street; may create accessibility challenges
    - Uneven sidewalk surface on the east side of Lindley Avenue 100 feet south of Kittridge Street; may create accessibility challenges
    - Growing vegetation between cracks in sidewalks, may decrease navigable width of sidewalk
- Kittridge Street
    - “Slow Children at Play” warning sign on Wynne Avenue located 50 feet north of Kittridge Street is defaced
    - Uneven sidewalk surface on the north side of Kittridge Street 75 feet east of Lindley Avenue; may create accessibility challenges
    - Uneven sidewalk surface on the south side of Kittridge Street at the driveway exit of main faculty parking lot; may create accessibility challenges
    - Tactile strips for all curbs ramps along Kittridge Street between Etiwanda Avenue and Lindley Avenue are absent; may be difficult for visually–impaired pedestrians to cross intersections
    - No marked crosswalks on Kittridge Street at Chimineas Avenue, Wynne Avenue, and Nestle Avenue; these intersections feature curb ramps on both the north and south sides of Kittridge Street, which may incorrectly indicate to pedestrians to cross mid-block at these locations
- Lindley Avenue and Kittridge Street

  - Uneven sidewalk surface near pedestrian push button on the northeast corner of the intersection due to pavement sinking; may create accessibility challenges with respect to reaching the pedestrian button
  - Curb ramp on the southwest corner is not flush with connecting sidewalk; may create accessibility challenges
  - Crossing pavement marking is worn on the south side of the intersection; may reduce crosswalk visibility
- Lindley Avenue and Victory Boulevard
  - Tactile strips for all curb ramps are absent; may be difficult for visually impaired pedestrians to cross the intersection
  - Gutter after curb ramp on the southwest corner is not flush with crossing pavement; may create accessibility challenges

Additional detail from the walk audit is provided in ***Appendix B***. Selected photos illustrating some of the deficiencies identified above are provided in ***Appendix C***.

4.2 Observed Circulation Deficiencies

- Pick-up/Drop-offs
  - Vehicles making illegal U-turns and double-parking along Etiwanda Avenue and Kittridge Street
  - Vehicles parking in driveways and blocking sidewalk and curb ramps along Etiwanda Avenue and Kittridge Street
  - No Parking zone on the south side of Kittridge Street, north of Reseda HS, is used for student pick-up/drop-off
  - Vehicles parking along red curbs (no parking) near parking lot driveways reduce line of sight for vehicles exiting parking lots, creating delays inside the parking lot and adjacent street
  - Vehicles parking on the south side of Kittridge Street cause interference with school bus drop-off operations

- Parking
    - Vehicles exiting parking lots create conflicts with pedestrians crossing parking lot driveways
    - Vehicles parked in unmarked areas or in no parking zones in faculty and staff parking lots
    - Accessibility-related pavement markings in student parking lot located in the southeast corner of school campus are worn
- Circulation
    - Permissive left-turn phasing at the intersection of Lindley Avenue and Kittridge Street creates delay for left turn movements
    - Conflict between pedestrians and vehicles on service road inside Reseda HS campus
    - High pedestrian volumes at the intersections of Etiwanda Avenue and Kittridge Street and Lindley Avenue and Kittridge Street causes vehicle delay
    - Pedestrians crossing mid-block on Etiwanda Avenue and Kittridge Street creates delay for through traffic
    - High pedestrian volumes at the Etiwanda Avenue cul-de-sac creates conflict with vehicles making U-turns at the cul-de-sac

4.3 Positive Attributes

- Campus appears well maintained and provides many opportunities for shade or other shelter from inadvertent weather

4.4 Opportunities

The following opportunities are not required improvements and are not required to limit or mitigate potential impacts. This list is provided solely as observations to LAUSD of the existing conditions that were observed during a site visit for planning purposes. The feasibility or practicality of these opportunities have not been evaluated and LAUSD does not have jurisdiction over any off-site improvements.

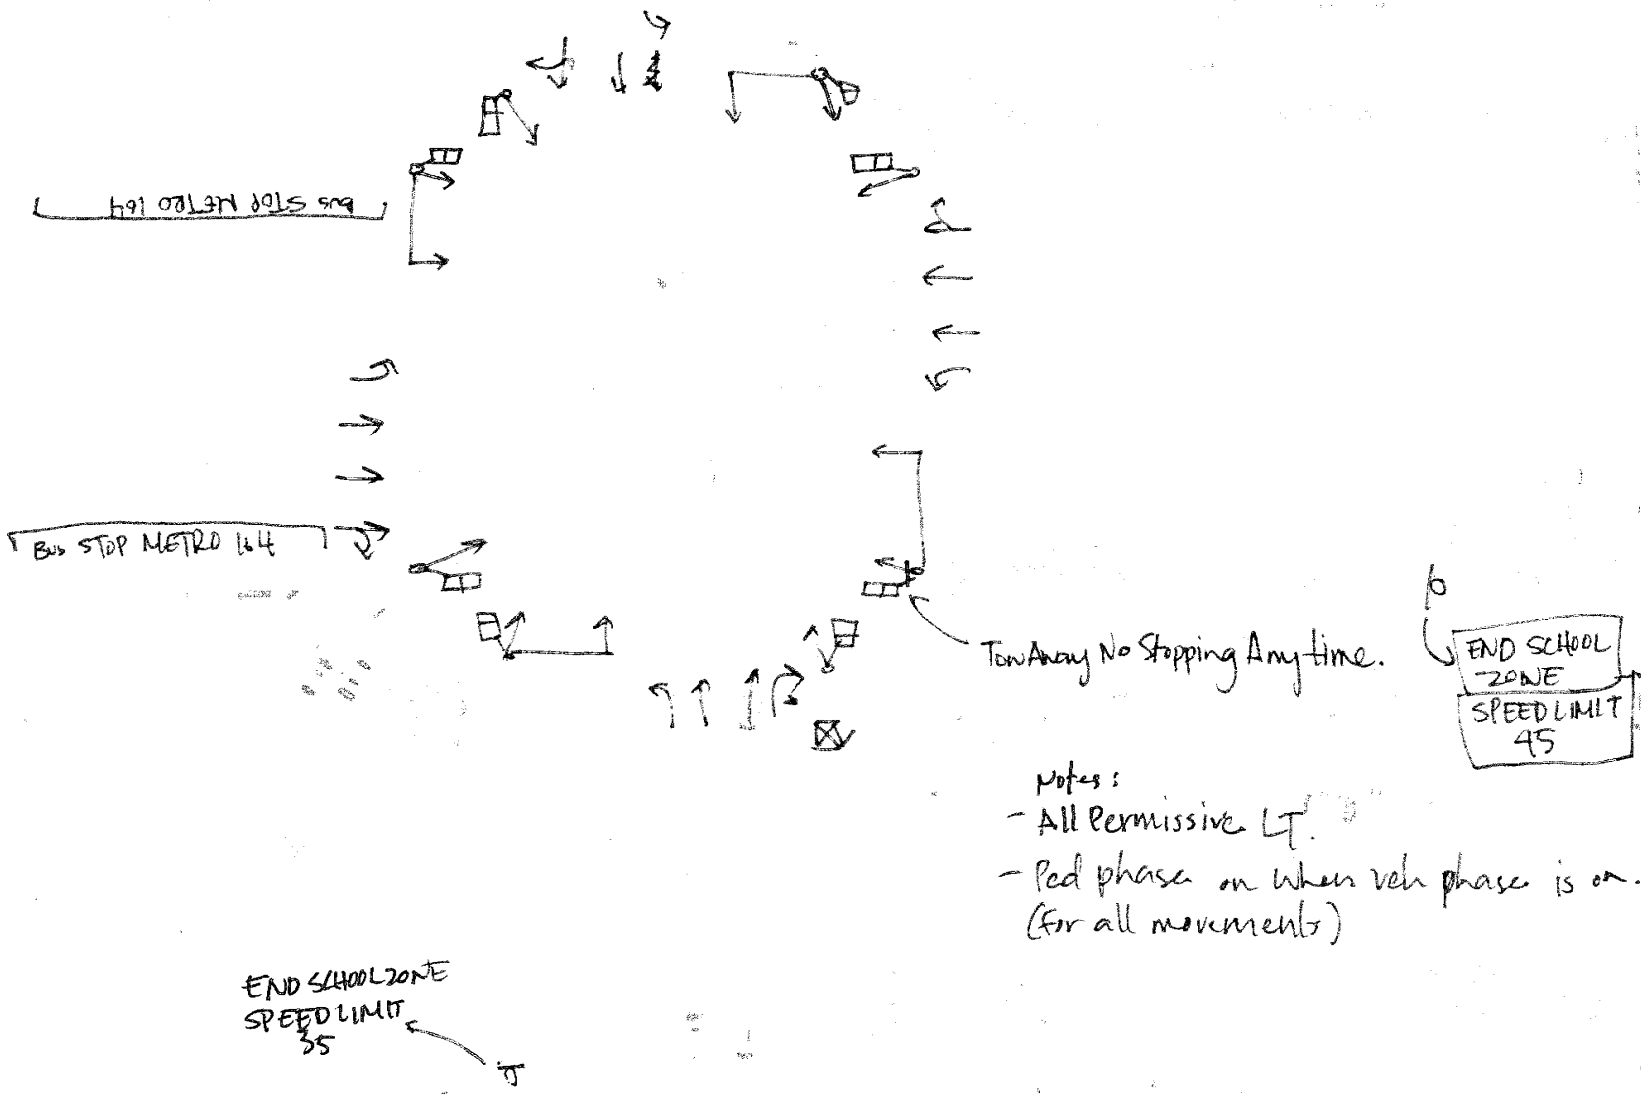
- Install signs that indicate “School Bus Only” for bus loading zone along Kittridge Street
- Repair worn pavement markings at the intersection of Lindley Avenue and Kittridge Street; however, off-site repairs are not within the jurisdiction of LAUSD

- Install striped pedestrian crossings along Kittridge Street to connect to neighboring streets (Chimineas Avenue, Wynne Avenue, and Nestle Avenue), or remove curb ramps on south side of Kittridge Street
- Repair or install new “Slow Children at Play” warning sign on Wynne Avenue; however, off-site repairs are not within the jurisdiction of LAUSD
- Repair or repave uneven sidewalk surfaces on Kittridge Street and Lindley Avenue; however, off-site repairs are not within the jurisdiction of LAUSD
- Consider requesting that the City vacate Etiwanda Avenue and relinquish part of the street to LAUSD, to help alleviate pedestrian-vehicle conflicts and congestion issues
- Consider terminating the service road near the gymnasium, and utilizing space occupied by portable classrooms as a turn-around and loading area for school buses; this would allow for complete separation between vehicles and pedestrians (who would also walk to or from the student parking lot), as well as help secure the campus from special events held at the gym and stadium
- Consider designating a student pick-up/drop-off area on Kittridge Street separated from the School Bus zone
- Install tactile strips on curb ramps at the intersections of Lindley Avenue and Kittridge Street, and Lindley Avenue and Victory Boulevard
- Consider promoting use of the student parking lot to school faculty and staff to accommodate overflow from the faculty and staff parking lots and reduce the number of vehicles illegally parking on-site
- Consider using underutilized student parking lot at the corner of Lindley Avenue and Victory Boulevard as a possible location for a new pick-up/drop-off facility around the perimeter
- Consider prohibiting left turns from eastbound Kittridge Street to Chimineas Avenue

APPENDIX A

Field Review Sheets

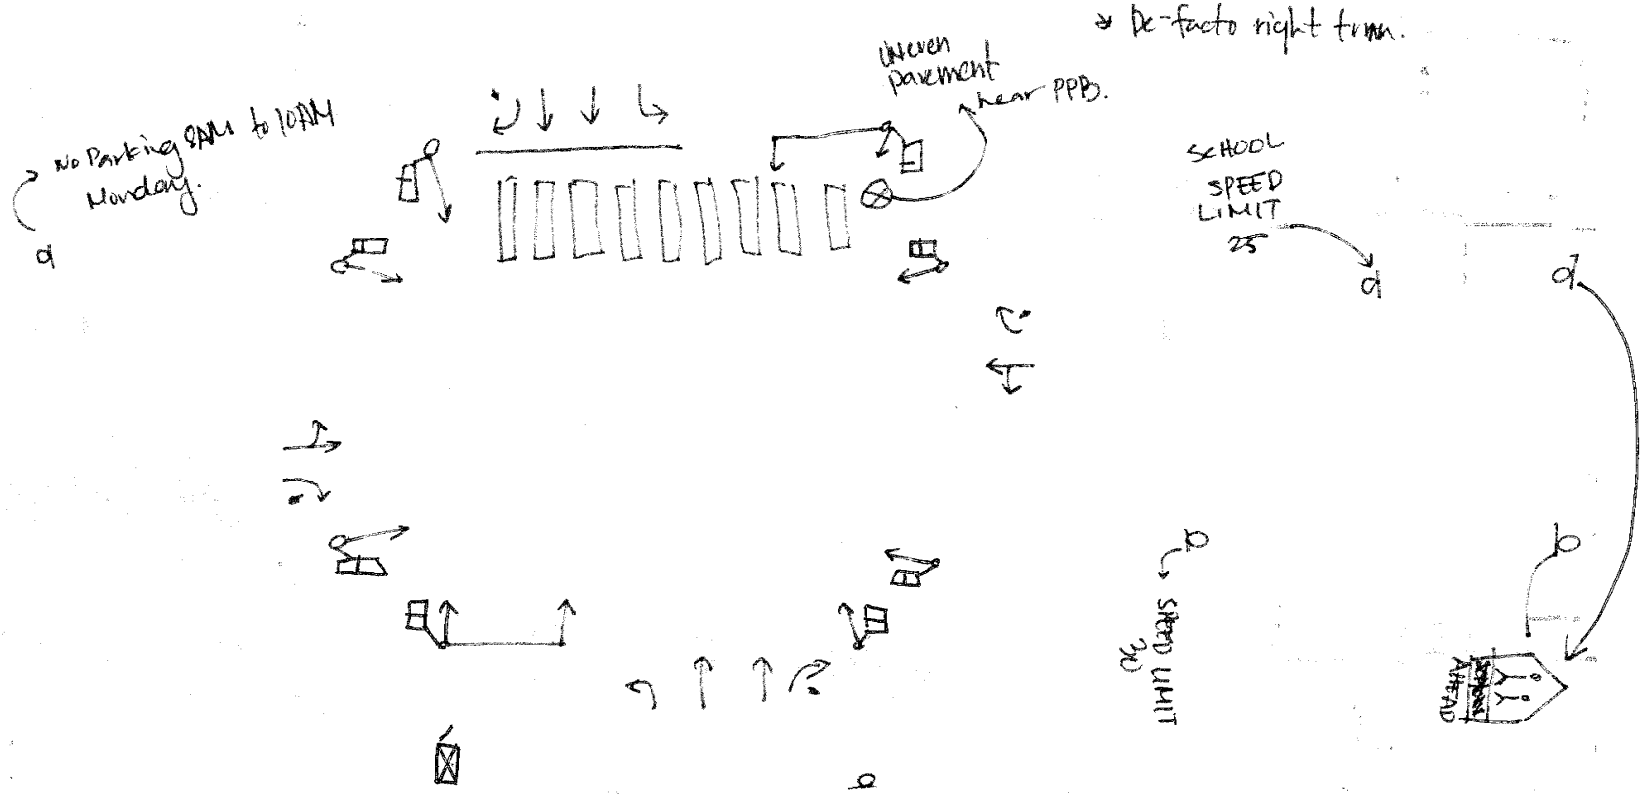
Victory Boulevard & Lindley Avenue



Notes:
- All Permissive LT.
- Ped phase on when veh phase is on. (for all movements)

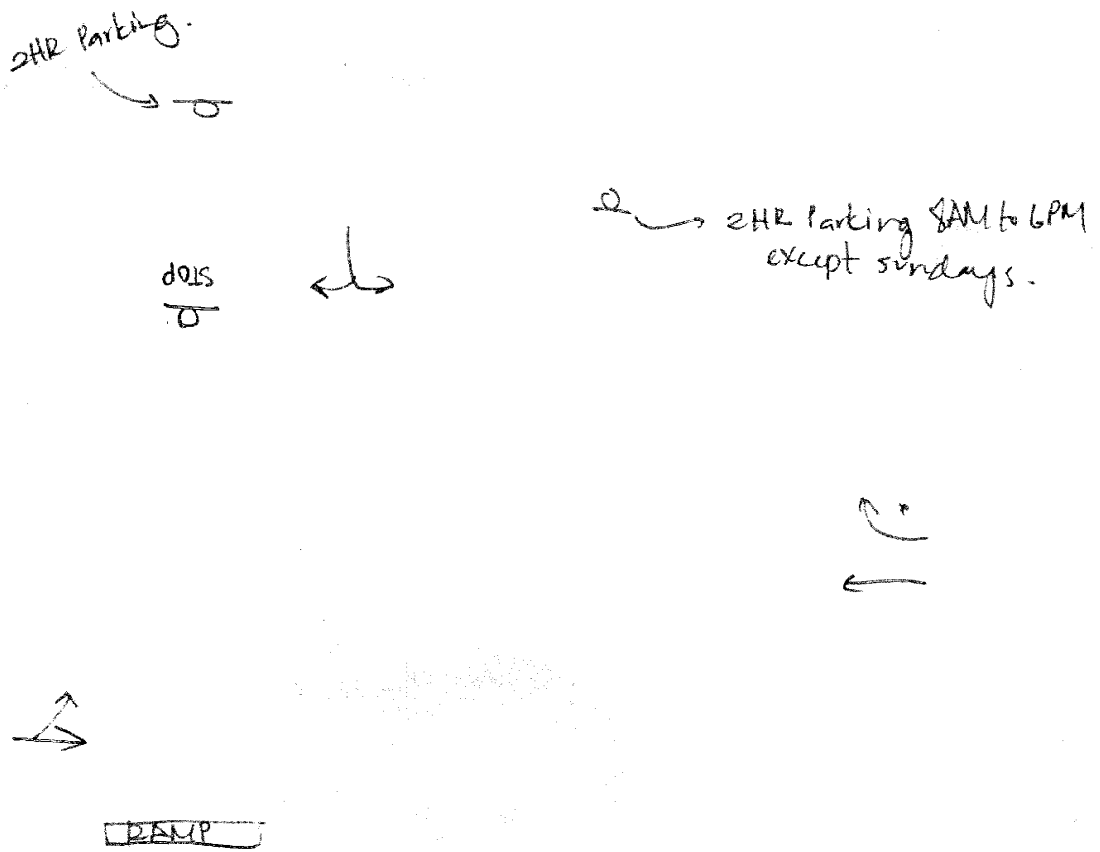
©2013 Cargo

Kinridge Street & Lindley Avenue

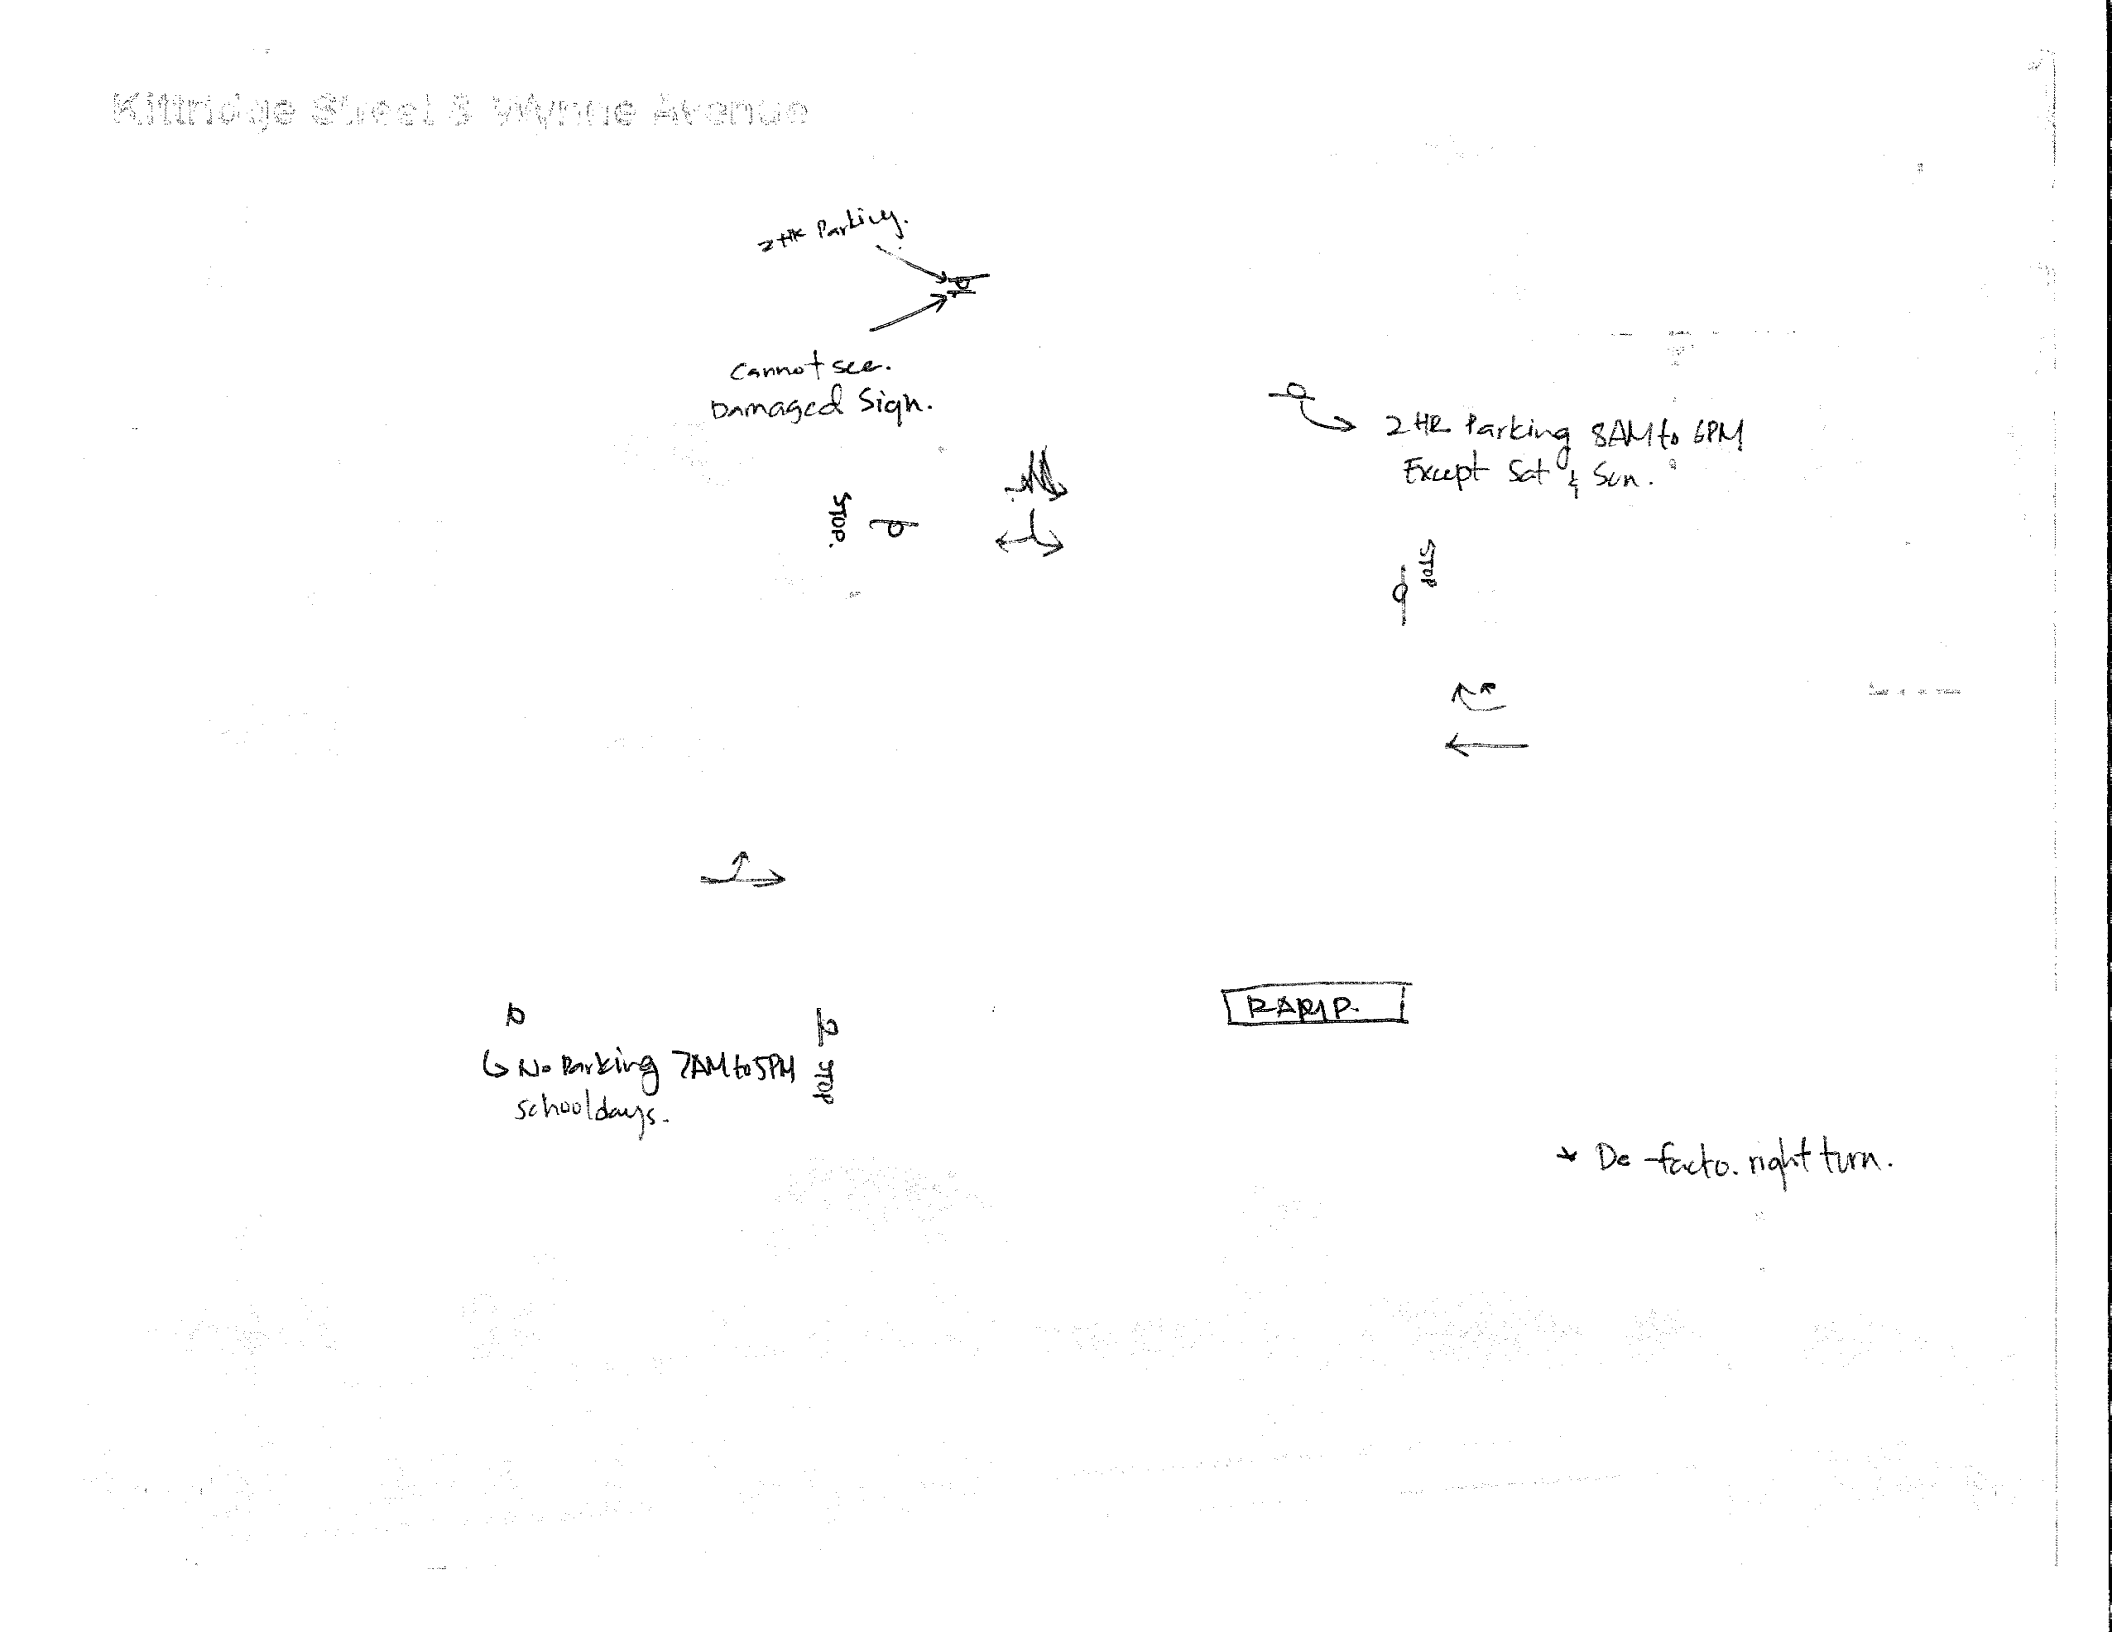


Notes:
- Semi-actuated.
- Ped phase for EB and WB always on when EB and WB phasings are on.
- All permissive LT.

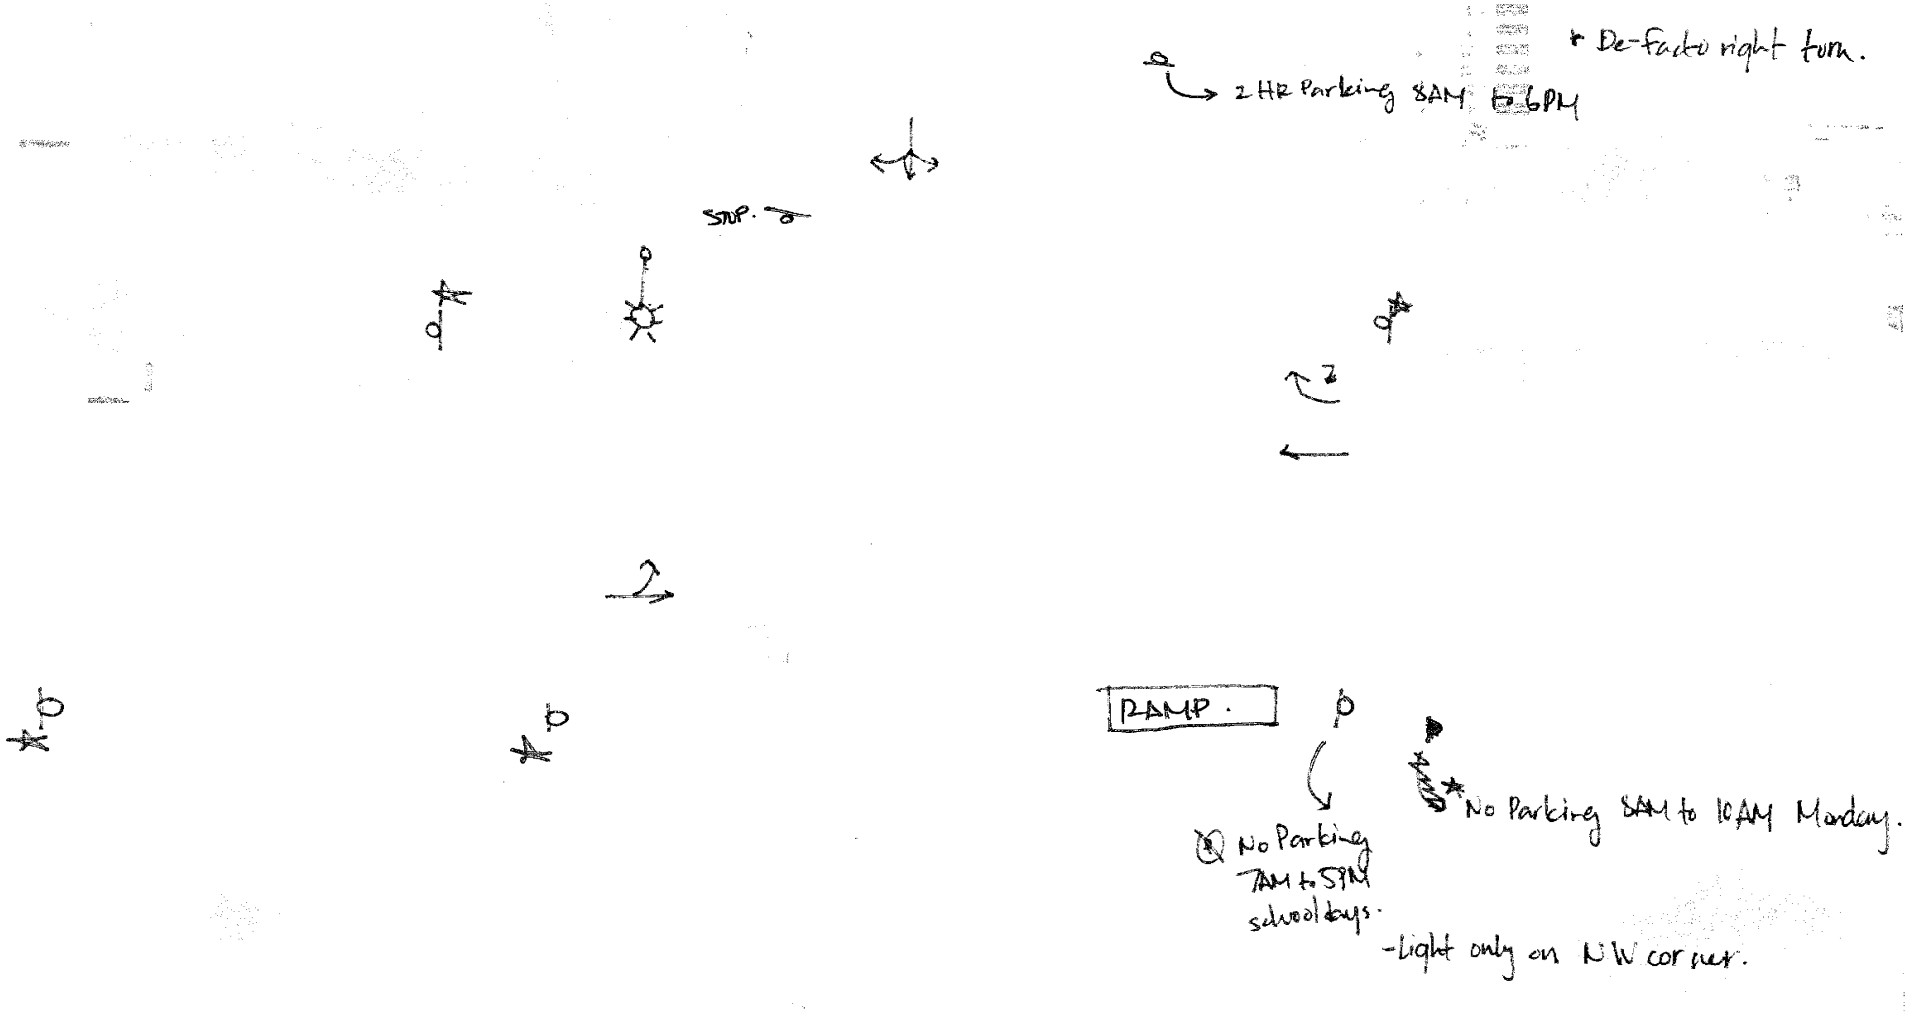
Kittridge Street & Entrance Avenue



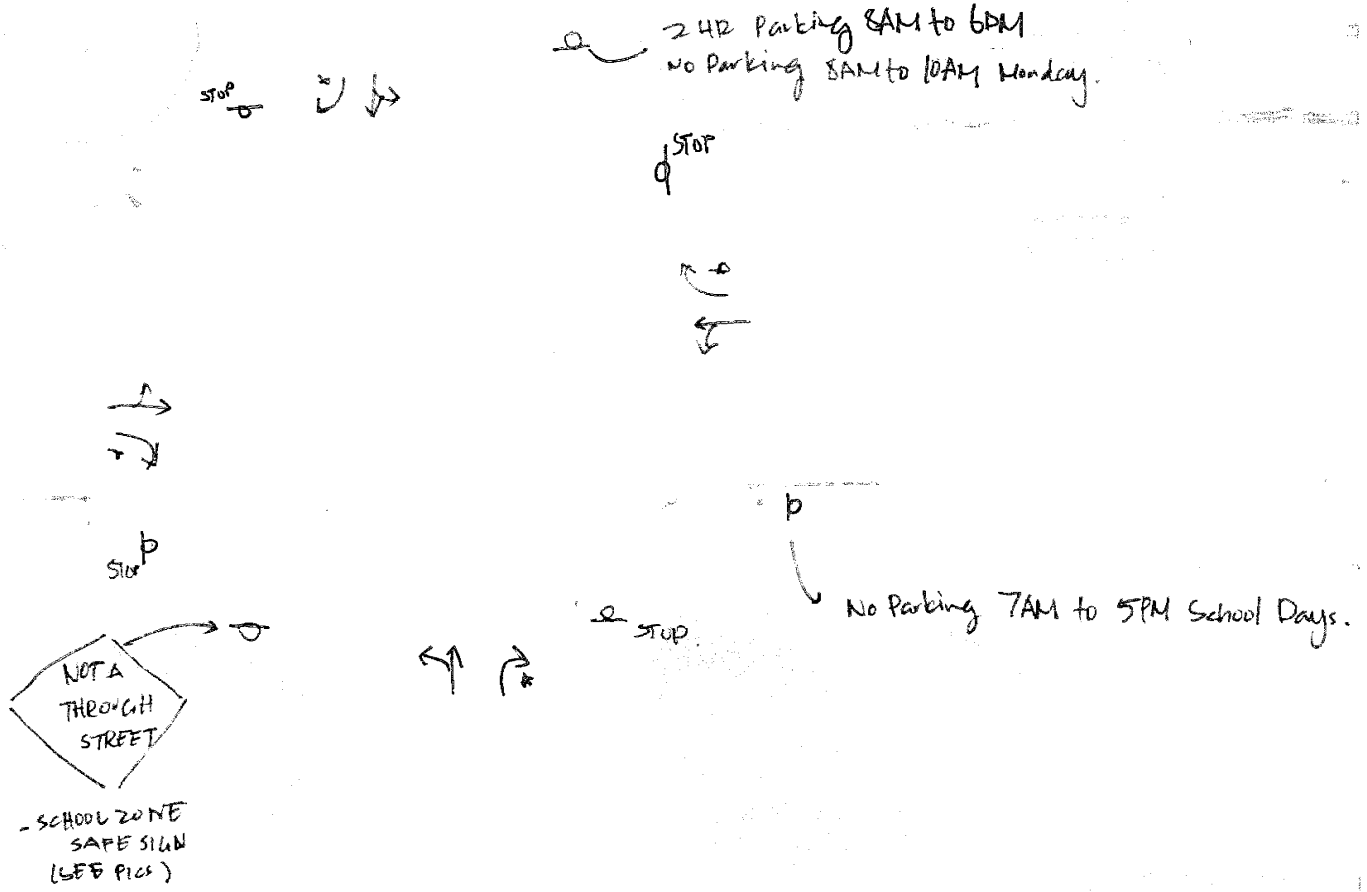
Kittridge Street & Wynne Avenue



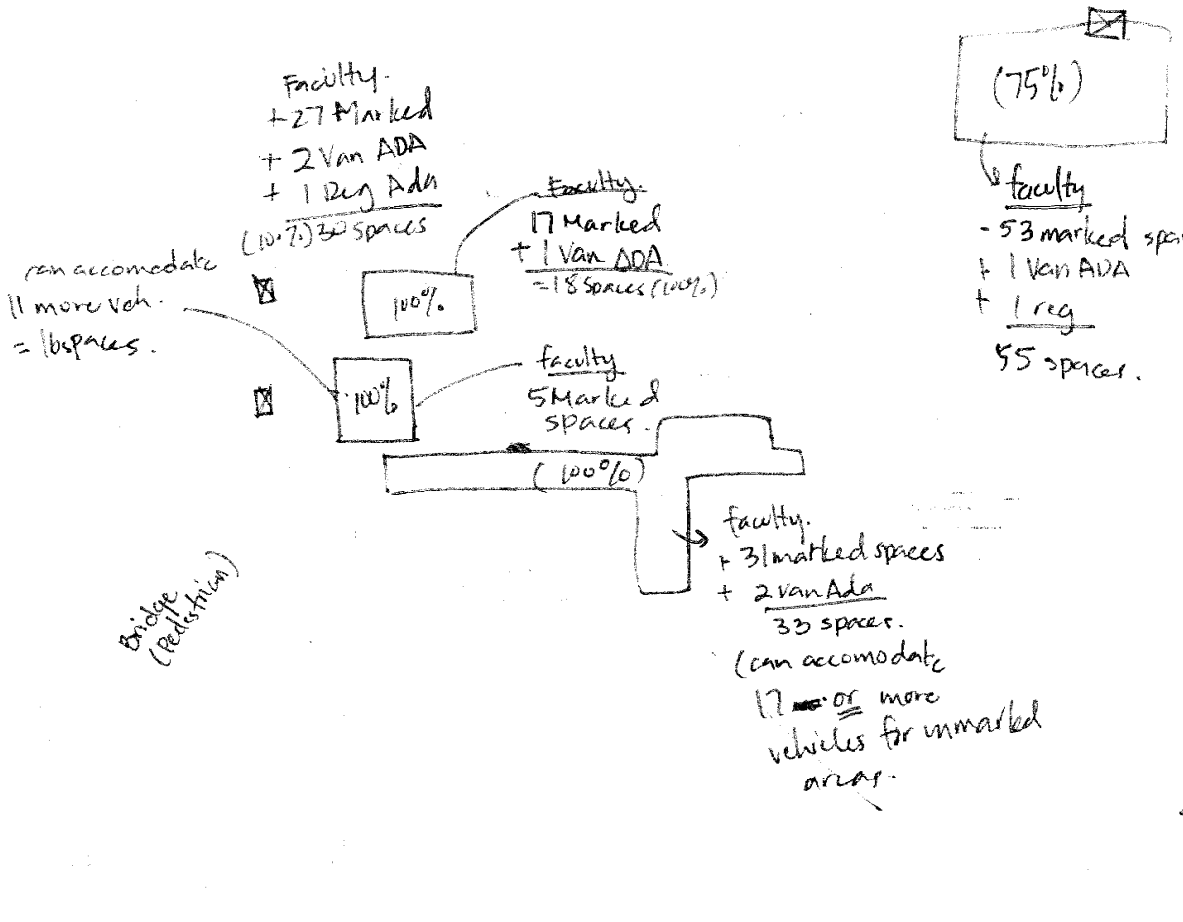
Kittridge Street & Nestle Avenue



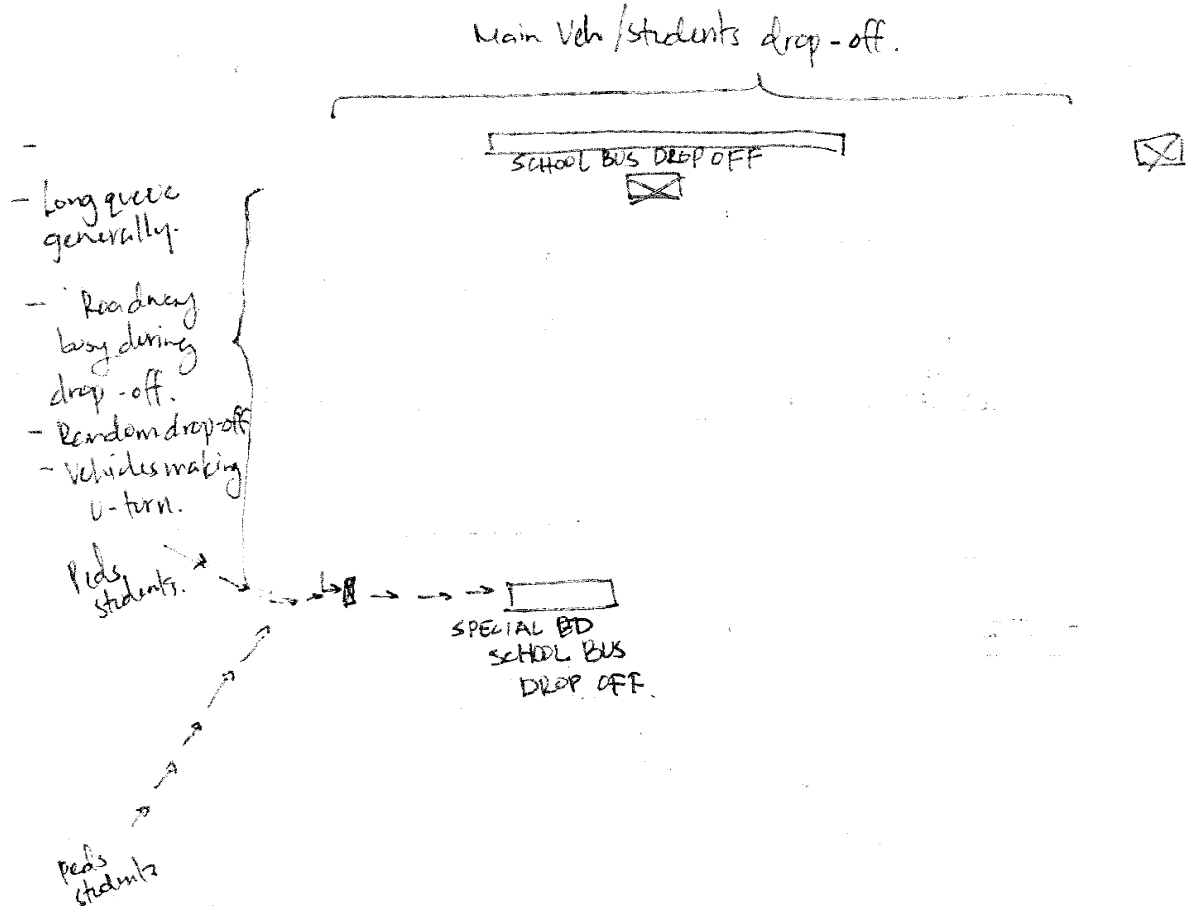
Kittridge Street & Sylvanda Avenue

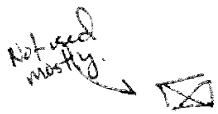


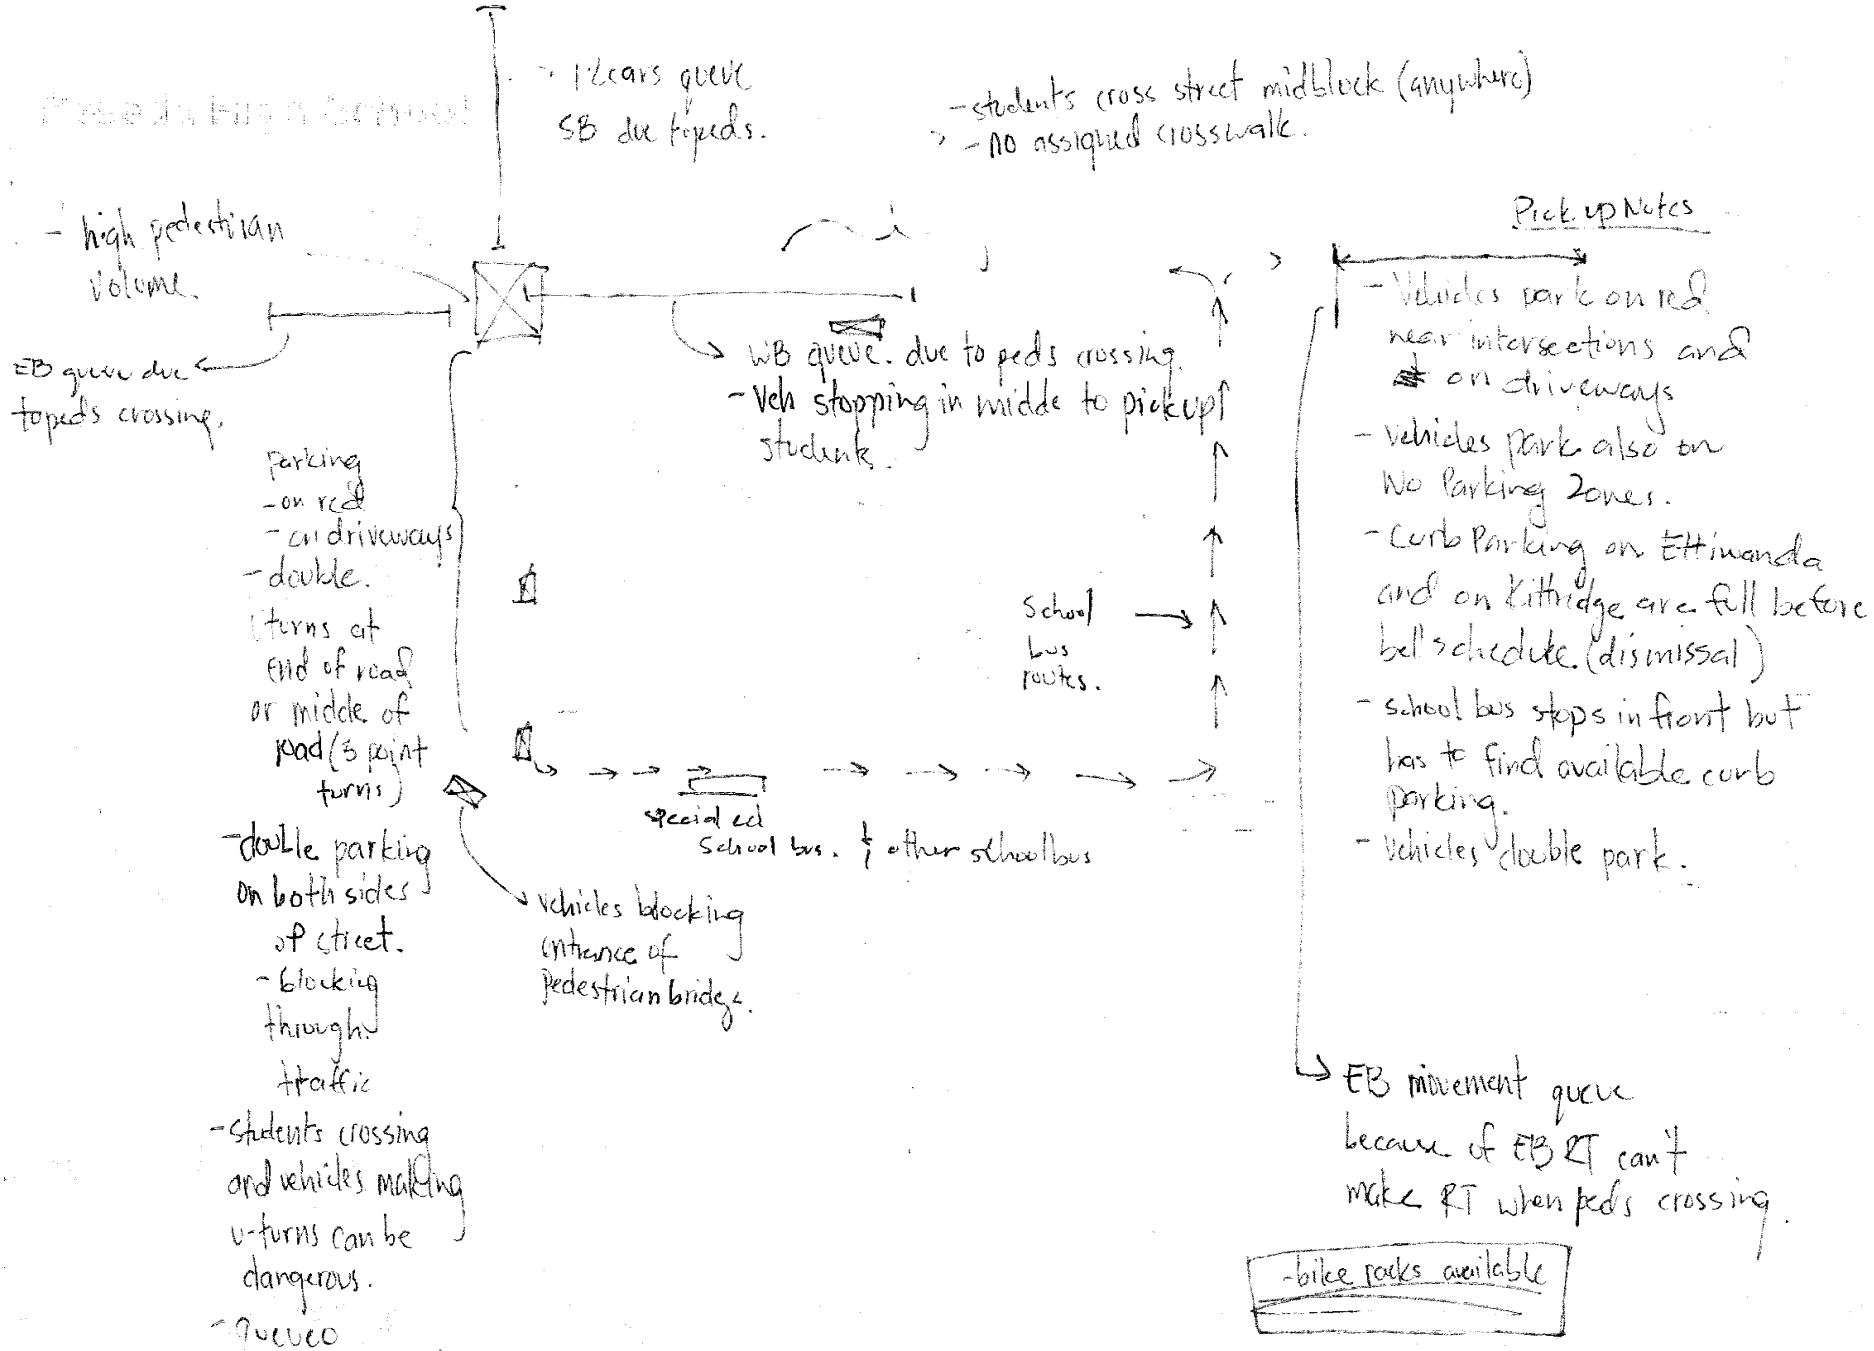
Reseda High School



Rosedale Hgts School

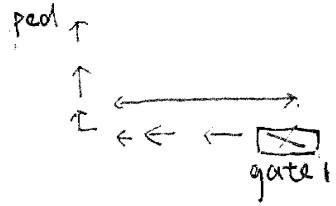




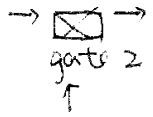


- 12 cars queue SB due to peds.
- students cross street midblock (anywhere)
- NO assigned crosswalk.
- high pedestrian volume.
EB queue due to peds crossing.
WB queue. due to peds crossing.
- Veh stopping in middle to pickup/ student.
Pick up Notes
- Vehicles park on red near intersections and on driveways
- Vehicles park also on No Parking Zones.
- Curb Parking on Ettiwanda and on Kittridge are full before bell schedule (dismissal)
- school bus stops in front but has to find available curb parking.
- Vehicles double park.
Parking
- on red
- on driveways
- double.
(turns at end of road or middle of road (3 point turns)
School bus routes.
special ed School bus. & other schoolbus
-double parking on both sides of street.
- blocking through traffic
Vehicles blocking entrance of pedestrian bridge.
-Students crossing and vehicles making u-turns can be dangerous.
-Queues
- NB movement all the way to the end of street.
- due to cars coming out of parking and pedestrians crossing.
EB movement queue because of EB RT can't make RT when peds crossing.
-bike racks available

Reseda High School



gate 2 : cars get out the parking lot (school buses) can be dangerous.
- students also use this gate.
- people park on the right near parking driveway. prohibits school buses left turn.
- queue in parking lot. (4veh)



PM Pick Up : 3:05pm.
- Vehicles/parents park on the south side of Kittridge St. (waiting for kids) (should be no parking 7am-5pm school days).
From Etiwanda to Lindley Ave (almost 100%)

gate 1.

- when some cars leave in the parking line, front car back off → safety concern.

- cross in the Kittridge st & Nestle Ave. no crossing guard. no crosswalk. → safety concern. marked.

- a queue on the north side of Kittridge near the intersection Kittridge and Etiwanda. because waiting for students to cross.

APPENDIX B

Walk Audit Sheets

EXISTING CONDITIONS FIELD ASSESSMENT

PROCEDURE:

Each school location will include a project limit of all streets, intersections and midblock crossings that immediately surround the school grounds. Streets and intersections will be identified prior to the site visit.

OBSERVER: Vivianne Tabuena / Sihua Song DATE: 05/24/2018

LOCATION/WEATHER: Reseda / Cloudy TIME: 8:00 am - 3:30pm

STREETS:

Kittridge St, between Etiwanda Ave and Lindley Ave

Lindley Ave, between Kittridge St and Victory Blvd.

Victory Blvd, between Lindley Ave and Etiwanda Ave

Etiwanda Ave, between Kittridge St and ~~south of~~ South of.

INTERSECTIONS:

① Etiwanda Ave and Kittridge St.

② Kittridge St. and Wynne Ave

③ Kittridge St and Nestle Ave

④ Kittridge St and Chimineas Ave.

⑤ Kittridge St and Lindley Ave

⑥ Lindley Ave and Victory Blvd.

After the project limit has been determined and aerial has been printed, the following list of items will be recorded or identified as missing:

1. Existing Lane Configurations
   a. Intersections – within reasonable vicinity of school
   b. Street Segments – within reasonable vicinity of school
2. Existing Traffic Signs
3. Locations of Existing Traffic Signals and Street Lighting
4. Locations of Existing Transit Areas
5. Existing Pedestrian and Bicycle Facilities
   a. Bike Lanes
   b. Sidewalks
   c. Crosswalks
   d. Pedestrian Ramps
6. Parking configurations as shown on aerials for:
   a. Administration
   b. Teachers
   c. Students
   d. Visitors
   e. Deliveries
   f. Buses
   g. On-street
7. Pick-up and Drop-off Operation Issues During Peak Periods
8. General Internal and External Circulation Issues

A Road Safety Audit (see attached template) will be conducted as part of each location's assessment.

NEEDS:

- Safety Vest
- Clipboard, pad and pen/pencil
- Geo-referenced digital camera
- Measuring wheel
- Shoes with ankle protection

LINDLEY AVENUE

STREETS

Topic		Question	Result (Y, N, Other or N/A)
Presence, Design and Placement	1.	Are sidewalks provided along the street?	Y
	2.	If no sidewalk is present, is there a walkable shoulder (e.g. wide enough to accommodate cyclists/pedestrians) on the road or other pathway/trail nearby?	N/A
	3.	Are shoulders/sidewalks provided on both sides?	Y
	4.	Is the sidewalk width adequate for pedestrian volumes?	Y
	5.	Is there adequate separation distance between vehicular traffic and pedestrians?	Y
	6.	Are sidewalk/street boundaries discernable to people with visual impairments?	N
	7.	Are ramps provided as an alternative to stairs?	Y
Quality, Conditions, and Obstructions	1.	Will snow storage disrupt pedestrian access or visibility?	N/A
	2.	Is the path clear from both temporary and permanent obstructions?	Y
	3.	Is the walking surface too steep?	N – Note 1
	4.	Is the walking surface adequate and well-maintained?	N –
Continuity and Connectivity	1.	Are sidewalks/walkable shoulders continuous and on both sides of the street?	Y
	2.	Are measures needed to direct pedestrians to safe crossing points and pedestrian access ways?	N
Lighting	1.	Is the sidewalk adequately lit?	Y on one side.
	2.	Does the street lighting improve pedestrian visibility at night?	Y
Visibility	1.	Is the visibility of pedestrians walking along the sidewalk/shoulder adequate?	Y
Driveways	1.	Are the conditions at driveways intersecting sidewalks endangering pedestrians?	N
	2.	Does the number of driveways make the route undesirable for pedestrian travel?	N
Traffic Characteristics	1.	Are there any conflicts between bicycles and pedestrians on sidewalks?	N. No bike.
Signs and Pavement Markings	1.	Are pedestrian travel zones clearly delineated from other modes of traffic through the use of striping, colored and/or textured pavement, signing, and other methods?	Y

***For any Result with "N" or "Other", please add notes below:**

Note 1. uneven surface on both sides. see picture. over-grown.

INTERSECTIONS

Topic		Question	Result (Y, N, Other or N/A)*
Presence, Design and Placement	1.	Do wide curb radii lengthen pedestrian crossing distances and encourage high-speed right turns?	N
	2.	Do channelized right turn lanes minimize conflicts with pedestrians?	N/A
	3.	Does a skewed intersection direct drivers' focus away from crossing pedestrians?	N
	4.	Are pedestrian crossings located in areas where sight distance may be a problem?	N
	5.	Do raised medians provide a safe waiting area (refuge) for pedestrians?	N/A
	6.	Are supervised crossings adequately staffed by qualified crossing guards?	N
	7.	Are marked crosswalks wide enough?	Y
	8.	Do at-grade railroad crossings accommodate pedestrians safely?	N/A
	9.	Are crosswalks sited along pedestrian desire lines?	Y
	10.	Are corners and curb ramps appropriately planned and designed at each approach to the crossing?	Y - Note 1
Quality, Conditions, and Obstructions	*Use questions for Streets for potential issues on obstructions*		
	1.	Is the crossing pavement adequate and well maintained?	Y
	2.	Is the crossing pavement flush with the roadway surface?	Y
Continuity and Connectivity	1.	Does pedestrian network connectivity continue through crossings by means of adequate, waiting areas at corners, curb ramps and marked crosswalks?	Y
	2.	Are pedestrians clearly directed to crossing points and pedestrian access ways?	Y
Lighting	1.	Is the pedestrian crossing adequately lit?	Y
Visibility	1.	Can pedestrians see approaching vehicles at all legs of the intersection/crossing and vice versa?	Y
	2.	Is the distance from the stop (or yield) line to a crosswalk sufficient for drivers to see pedestrians?	Y
	3.	Do other conditions exist where stopped vehicles may obstruct visibility of pedestrians?	N
Access Management	1.	Are driveways placed close to crossings?	N
Traffic Characteristics	1.	Do turning vehicles pose a hazard to pedestrians?	N
	2.	Are there sufficient gaps in the traffic to allow pedestrians to cross the road?	Y
	3.	Do traffic operations (especially during peak periods) create a safety concern for pedestrians?	N
Signs and Pavement Markings	1.	Is paint on stop bars and crosswalks worn, or are signs worn, missing, or damaged?	Y - Note 2.
	2.	Are crossing points for pedestrians properly signed and/or marked?	Y
Signals	1.	Are pedestrian signal heads provided and adequate?	Y
	2.	Are traffic and pedestrian signals timed so that wait times and crossing times are reasonable?	Y
	3.	Is there a problem because of an inconsistency in pedestrian actuation (or detection) types?	N
	4.	Are all pedestrian signals and push buttons functioning correctly and safely?	Y
	5.	Are ADA accessible push buttons provided and properly located?	N/A.

***For any Result with "N" or "Other", please add notes below:**

INTERSECTIONS

Topic		Question	Result (Y, N, Other or N/A)*
Presence, Design and Placement	1.	Do wide curb radii lengthen pedestrian crossing distances and encourage high-speed right turns?	N
	2.	Do channelized right turn lanes minimize conflicts with pedestrians?	N/A
	3.	Does a skewed intersection direct drivers' focus away from crossing pedestrians?	N
	4.	Are pedestrian crossings located in areas where sight distance may be a problem?	N
	5.	Do raised medians provide a safe waiting area (refuge) for pedestrians?	N/A
	6.	Are supervised crossings adequately staffed by qualified crossing guards?	N
	7.	Are marked crosswalks wide enough?	Y
	8.	Do at-grade railroad crossings accommodate pedestrians safely?	N/A
	9.	Are crosswalks sited along pedestrian desire lines?	Y
	10.	Are corners and curb ramps appropriately planned and designed at each approach to the crossing?	Y - Note 1
Quality, Conditions, and Obstructions	*Use questions for Streets for potential issues on obstructions*		
	1.	Is the crossing pavement adequate and well maintained?	Y
	2.	Is the crossing pavement flush with the roadway surface?	Y other Note 3
Continuity and Connectivity	1.	Does pedestrian network connectivity continue through crossings by means of adequate, waiting areas at corners, curb ramps and marked crosswalks?	Y
	2.	Are pedestrians clearly directed to crossing points and pedestrian access ways?	Y
Lighting	1.	Is the pedestrian crossing adequately lit?	Y
Visibility	1.	Can pedestrians see approaching vehicles at all legs of the intersection/crossing and vice versa?	Y
	2.	Is the distance from the stop (or yield) line to a crosswalk sufficient for drivers to see pedestrians?	Y
	3.	Do other conditions exist where stopped vehicles may obstruct visibility of pedestrians?	N
Access Management	1.	Are driveways placed close to crossings?	N
Traffic Characteristics	1.	Do turning vehicles pose a hazard to pedestrians?	N
	2.	Are there sufficient gaps in the traffic to allow pedestrians to cross the road?	Y
	3.	Do traffic operations (especially during peak periods) create a safety concern for pedestrians?	N
Signs and Pavement Markings	1.	Is paint on stop bars and crosswalks worn, or are signs worn, missing, or damaged?	Y - Note 2
	2.	Are crossing points for pedestrians properly signed and/or marked?	Y
Signals	1.	Are pedestrian signal heads provided and adequate?	Y
	2.	Are traffic and pedestrian signals timed so that wait times and crossing times are reasonable?	Y
	3.	Is there a problem because of an inconsistency in pedestrian actuation (or detection) types?	N
	4.	Are all pedestrian signals and push buttons functioning correctly and safely?	Y
	5.	Are ADA accessible push buttons provided and properly located?	Y

***For any Result with "N" or "Other", please add notes below:**

Note 1 No tactile stripe.

2 South side of this intersection. paint on crosswalk is worn.

3. Curb ramp not flush with sidewalk @ NE corner. @ NW corner. uneven sidewalk - uneven surface near PPB

KITTRIDGE ST & WINNE Avenue.

TRANSIT AREAS

Topic		Question	Result (Y, N, Other or N/A)*
Presence, Design and Placement	1.	Are bus stops sited properly?	Y
	2.	Are safe pedestrian crossings convenient for transit and school bus users?	Y
	3.	Is sight distance to bus stops adequate?	Y
	4.	Are shelters appropriately designed and placed for pedestrian safety and convenience?	N/A No shelter.
Quality, Conditions, and Obstructions	1.	Is the seating area at a safe and comfortable distance from vehicle and bicycle lanes?	Y
	2.	Do seats (or persons sitting on them) obstruct the sidewalk or reduce its usable width?	N.
	3.	Is a sufficient landing area provided to accommodate waiting passengers, boarding/alighting passengers, and through/bypassing pedestrian traffic at peak times?	Y.
	4.	Is the landing area paved and free of problems such as uneven surfaces, standing water, or steep slopes?	N.
	5.	Is the sidewalk free of temporary/permanent obstructions that constrict its width or block access to the bus stop?	Y
Continuity and Connectivity	1.	Is the nearest crossing opportunity free of potential hazards for pedestrians?	Y
	2.	Are transit stops part of a continuous network of pedestrian facilities?	Y.
	3.	Are transit stops maintained during periods of inclement weather?	Y.
Lighting	1.	Are access ways to transit facilities well-lit to accommodate early-morning, late-afternoon, and evening pedestrian traffic?	Y
Visibility	1.	Are open sight lines maintained between approaching buses and passenger waiting and loading areas?	Y.
Traffic Characteristics	1.	Do pedestrians entering and leaving buses conflict with cars, bicycles, or other pedestrians?	N.
Signs and Pavement Markings	1.	Are appropriate signs and pavement markings provided for school bus and transit stops?	Y.

***For any Result with "N" or "Other", please add notes below:**

APPENDIX C

Selected Photos

Lindley Avenue, looking north; uneven surface on the west side of Lindley Avenue (right); growing vegetation between sidewalk cracks (left), may be difficult to traverse in a wheelchair

Lindley Avenue, looking south; uneven surface on the east side of Lindley Avenue, may be difficult to traverse in a wheelchair

Wynne Avenue, 50 feet north of Kittridge Street; warning sign is defaced and illegible

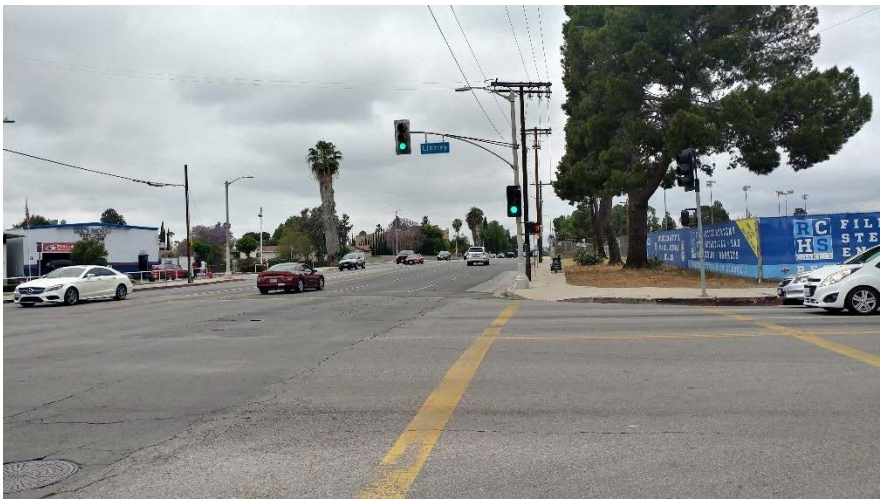
Kittridge Street looking east; uneven surface on the northside of the street, may be difficult to traverse in a wheelchair

Kittridge Street, looking west; uneven surface at staff parking lot driveway, south side of Kittridge Street, may be difficult to traverse in a wheelchair

Lindley Avenue and Kittridge Street; northeast corner; uneven surface due to pavement sinking, may be difficult to access pedestrian push button

Lindley Avenue and Kittridge Street, southwest corner; curb ramp is not flush with connecting sidewalk, may be difficult to traverse in a wheelchair

Lindley Avenue and Kittridge Street, south side; crossing pavement marking is worn, may reduce visibility of crosswalk



Lindley Avenue and Victory Boulevard; tactile strips are absent on all curb ramps, may be difficult for visually-impaired pedestrians to travel through intersection

Lindley Avenue and Victory Boulevard, southwest corner; gutter after curb ramp is not flush with the crossing pavement, may be difficult to traverse in a wheelchair

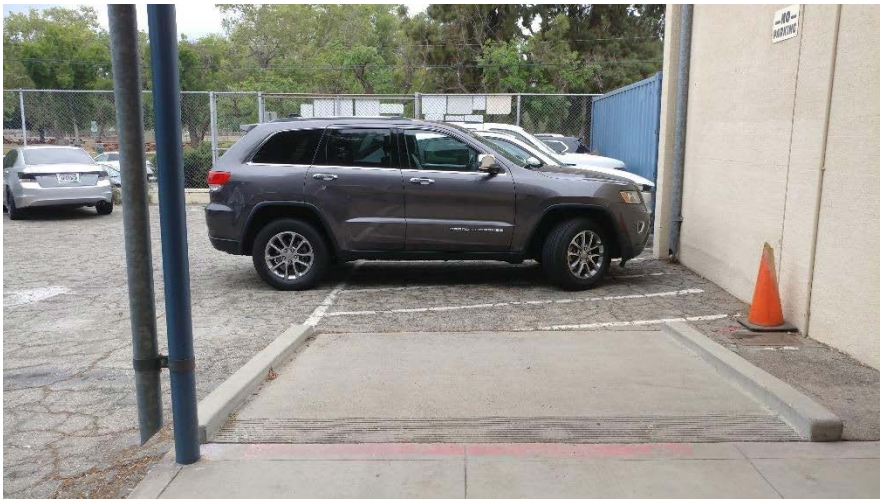
Student parking lot located at southwest corner of Reseda HS; accessible parking pavement marking is worn

Kittridge Street, looking north; no marked crosswalks along Kittridge Street to travel to neighboring street (Chimeneas Avenue, Wynne Avenue, and Nestle Avenue) causing students to cross mid-block creating delay for through vehicles; curb ramps provided but no marked crosswalk

Etiwanda Avenue, looking south; vehicles parking in driveways, blocking sidewalks and creating conflict with through vehicles and pedestrians

Kittridge Street looking east; vehicles and school buses park in No Parking Zone; school buses have to share available curb parking with other vehicles

On-site near south side faculty parking lot; vehicles parking in unmarked spaces



Faculty parking lot located near the southeast corner of Etiwanda Avenue and Kittridge Street; vehicles parked in unmarked spaces near accessible ramps

Minor desire lines created by students near auditorium, indicating possible need for sidewalk

TECHNICAL MEMORANDUM

Date: July 3, 2019

To Lynn Kaufman – Impact Sciences

From: Brian Marchetti, AICP

Subject: Traffic/Circulation Analysis – Reseda High School Comprehensive Modernization Project

---

Introduction

This traffic report was produced for the Los Angeles School District (LAUSD), under a contract with Impact Sciences. The report provides an area intersection level of service (LOS) analyses, and a vehicle, pedestrian, and bicyclist volume analysis at those locations. Observations in the field were also made for this report of existing conditions. Those observations were then compared to findings and conclusions of the previous Site Circulation Report. Site conditions were reviewed against guidelines defined within the LAUSD document entitled *Traffic and Pedestrian Requirements for New Schools*.

The traffic operations and volumes analysis focuses on project construction period conditions. The school improvement project will not be providing additional student seating capacity or any substantive increase in school programs. The project focuses on improvement of existing facilities.

Collected Data

Traffic counts were conducted at the following intersections on Wednesday May 29, 2019, and included vehicles, pedestrians, and bicyclists. The counts were conducted for all three volume categories during the 7:00 a.m. to 9:00 a.m. and 2:00 p.m. to 4:00 p.m. school activity peak timeframes:

- Reseda Blvd./Kittridge St.
- Etiwanda Ave./Kittridge St.
- Wynne Ave./ Kittridge St.
- Lindley Ave./Kittridge St.
- Reseda Blvd./Victory Blvd.
- Lindley Ave/Victory Blvd.

The peak-hour turning movement figures and other report figures are provided in Attachment A:

- Figure 1 – Study Intersection Lane and Control Configurations

- Figure 2 – Existing AM/PM Turning Movement Volumes
- Figure 3 – Existing AM Pedestrian Crossing Volumes
- Figure 4 – Existing PM Pedestrian Crossing Volumes
- Figure 5 – Existing AM/PM Bicycle Volumes
- Figure 6 – Future No-Project AM/PM Turning Movement Volumes
- Figure 7 – Construction Trips Distribution
- Figure 8 – Construction Trips AM/PM Assignment
- Figure 9 – Future with Project AM/PM Construction Turning Movement Volumes

Analysis of Existing Intersection Operations

The traffic counts were conducted when the high school was in session, and the AM count period overlapped the inbound student travel timeframe to the school while the PM count period overlapped the outbound student travel timeframe. The vehicle volume counts, and existing approach lane configurations and traffic controls, at the signalized study intersections were applied to City of Los Angeles Department of Transportation (LADOT) Critical Movement Analysis (CMA) worksheets. For the two unsignalized study intersections, a Highway Capacity Manual analysis was applied. The existing level of service (LOS) output that resulted from this analysis is summarized in Table 1.

TABLE 1 – EXISTING STUDY AREA INTERSECTION OPERATIONS

	Study Intersections	AM Peak		PM Peak	
		V/C or Delay	LOS	V/C or Delay	LOS

4	Lindley Ave/ Kittridge St	0.609	B	0.352	A
5	Lindley Ave / Victory Blvd	0.794	C	0.782	C
6	Reseda Blvd / Victory Blvd	0.765	C	0.629	B

** All-way stop intersection, analysis was based on HCM methodology. Values denote delay per vehicle in seconds.*

All of the study intersections operate at good LOS values. The worst-case LOS values from the analysis were at the intersections of Lindley Avenue/Kittridge Street and Lindley Avenue/Victory Blvd., where the values were at C.

The existing lane configurations and traffic controls at the study intersections are illustrated on Figure 1 of Attachment A. The vehicle turning movement volumes are illustrated on Figure 2. The LOS calculations are provided in Attachment B for signalized intersections and in Attachment C for unsignalized intersections.

Analysis of Pedestrian and Bicycle Volumes

The existing pedestrian crossing volumes at the study intersections are illustrated on Figure 3 (AM peak) and Figure 4 (PM peak) of Attachment A.

The highest AM period pedestrian volumes occur at the intersection of Etiwanda Avenue/Kittridge Street, at the northwest corner of the high school campus, where in the peak hour 442 pedestrians crossed at the south leg and 394 pedestrians crossed at the west leg. The second highest volumes occur at the intersection of Lindley Avenue/Kittridge Street, at the northeast corner of the campus, where in the peak hour 106 pedestrians crossed at the south leg. The next highest volumes occurred at the intersection of Reseda Blvd./Victory Blvd., to the southwest of the school site.

The highest PM period pedestrian volumes occurred in generally the same pattern as the AM volumes. The highest PM volumes occurred at the intersection of Etiwanda Avenue/Kittridge Street where in the peak hour 444 pedestrians crossed at the south leg and 343 pedestrians crossed at the west leg. The second highest volumes occur at the intersection of Reseda Blvd./Victory Blvd., where in the peak hour 159 pedestrians crossed at the west leg. The next highest volumes occurred at the intersection of Lindley Avenue/Kittridge Street.

The existing AM and PM peak-hour bicycle volumes at the study intersections are illustrated on Figure 5 of Attachment A. The bicycle volumes are generally low at the study intersections, with the highest turning volumes at six in the AM period at the southbound left-turn movement of the intersection of Etiwanda Avenue/Kittridge Street and at the southbound thru movement of the intersection of Reseda Blvd./Victory Blvd. PM-period volumes in the opposite travel direction are approximately the same.

Field Observations

This section provides a review of site access configurations and access issues, based on guidelines defined within the LAUSD policy document entitled *Traffic and Pedestrian Requirements for New Schools*. It is also based on the previous *Site Circulation Report* conducted for the campus by LIN Consulting, Inc., dated October 17, 2018. There would be no significant impacts in these areas, based on the analysis discussed here.

The site has a main entrance on the north side of campus, but has emergency gates on other sides of the campus, satisfying the guideline of providing multiple points of egress for emergencies.

The previous report addressed a potential designation of a student pick-up/drop-off area on Kittridge Street, separate in designation from the school bus zone. There is no marked school bus drop off area, but rather a no parking area is signed for this purpose. These designations could be improved, including demarcation of a parent vehicle pick-up/drop-off area at the curb. Such improvements have not been made but should be considered by LAUSD.

The 2018 *Site Circulation Report* identified a lack of marked crosswalks on Kittridge Street at Chimineas Avenue, Wynne Avenue, and Nestle Avenue, along the north side of the campus. The intersection of Etiwanda Avenue and Kittridge Street, the intersection of Lindley Avenue and Kittridge Street at the northeast corner of the campus, and the intersection of Lindley Avenue and Victory Blvd. at the southeast

corner of the campus, have existing striped yellow crosswalks. The crosswalks do not have high-visibility striping but rather have single striped lines that denote the edges of the crosswalks. The intersection of Wynne Avenue and Kittridge Street is an all-way stop-sign controlled intersection at approximately the mid-point of the north frontage of the campus. At this location, no crosswalk striping is provided. A restriping of the two existing sets of crosswalks on Kittridge Avenue, and the addition of crosswalk striping at the Wynne Avenue intersection, is recommended for consideration by LAUSD. High visibility crosswalk striping can be used for these improvements, to provide up-to-date safety improvements for crossing students.

An opportunity identified in the previous report was the potential need to repair or repave uneven sidewalk surfaces on Kittridge Street and Lindley Avenue. The continued state of these sidewalks was confirmed in the field. On Lindley Avenue the sidewalk is broken in places on the east side of street and cracked with heavy weed growth on the west side. On Kittridge Street, the sidewalk is broken/cracked in places on both sides of the roadway. Repairing these sidewalks through coordination with the City of Los Angeles should be considered by LAUSD.

LAUSD could consider using the underutilized student parking lot at the corner of Lindley Avenue and Victory Boulevard as a possible location for a new pick-up/drop-off facility, as recommended in the previous report.

Some of these recommended measures, if implemented, would help to satisfy the LAUSD guideline of placing school vehicle access points on local roadways (or on-site) to not impede traffic on major roadways. Some of these measures would help to satisfy the LAUSD guideline on bus loading and passenger/car loading areas.

Analysis of Construction Period Level of Service and Impacts

The peak of construction would occur in the year 2022, when demolition is occurring and truck hauling trips would be high. The number of construction employees during this construction period was used as an input, as was the number of construction truck trips for hauling away construction debris. The site construction employee population number of 15 was applied, and inbound AM and outbound PM peak-hour trips were assumed for all employees. The daily construction round truck trip number of 493 was multiplied by two for one-way trips and a passenger car equivalency factor of 2.5 to provide for the additional effects on capacity and lower operating speeds. Peak hour totals for trucks were calculated as being one-eighth of the daily total, assuming an eight-hour work day.

The construction-period trip generation calculations are provided in Table 2.

TABLE 2 – PROJECT CONSTRUCTION PERIOD TRIP GENERATION

Land Use	Average Daily Trips	AM Peak			PM Peak		
		Total	In	Out	Total	In	Out
Field Personnel	30	15	15	0	15	0	15
Truck Trips	2465	308	154	154	310	155	155
Total	**2,495**	**323**	**169**	**154**	**325**	**155**	**170**

The year-2019 traffic counts were factored upward to year-2022 volumes based on a conservative annual growth rate of two percent, resulting in a total applied growth of six percent. This defined future no-project conditions. Project trip generation was added to define future with-project conditions. The construction-period intersection operations analysis is summarized in Table 3.

TABLE 3 – FUTURE WITH-PROJECT CONSTRUCTION STUDY AREA INTERSECTION OPERATIONS

Study Intersections		Peak Hour	Future 2022 No Project V/C	Future 2022 No Project LOS	Future 2022 With Project V/C	Future 2022 With Project LOS	Change	Sig Impact?

		PM	0.836	D	0.883	D	0.047	No
6	Lindley St / Reseda Ave	AM	0.818	D	0.886	D	0.068	No
		PM	0.673	B	0.691	B	0.018	No

** All-way stop intersection, analysis was based on HCM methodology. Values denote delay per vehicle in seconds.*

The causing or worsening of LOS values of E or F at the study intersections due to project construction activities was defined to be significant for impact determinations. Worst-case LOS values of D would occur at the intersections of Reseda Avenue/Victory Blvd. (AM and PM peak hours) and at the intersection of Lindley Street/Reseda Avenue (AM peak hour). The LOS D conditions would be present in the future period, with or without the construction activities. LOS E conditions would not result, however.

No significant project impacts would therefore occur during the construction period.

Intersection Level Of Service Report
Intersection 3: Wynne Avenue & Kittridge Street

Control Type:	All-way stop	Delay (sec / veh):	9.0
Analysis Method:	HCM 6th Edition	Level Of Service:	A
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.306

Intersection Setup

Name	Wynne Avenue		Kittridge Street		Kittridge Street	
Approach	Southbound		Eastbound		Westbound	
Lane Configuration						
Turning Movement	Left	Right	Left	Thru	Thru	Right
Lane Width [ft]	12.00	12.00	12.00	12.00	12.00	12.00
No. of Lanes in Pocket	0	0	0	0	0	0
