1.0 INTRODUCTION

TRC Solutions, Inc. (TRC), on behalf of the Los Angeles Unified School District, Office of Environmental Health and Safety (LAUSD), has prepared this Preliminary Environmental Assessment (PEA) Equivalent Report for Theodore Roosevelt Senior High School (Roosevelt High School or Site), located at 456 South Mathews Street, Los Angeles, California (Site). See Figures 1 and 2 for the site location. Roosevelt High School is scheduled for a comprehensive modernization project involving removal and/or renovation of multiple site structures. In preparation for the school improvements and renovations, this PEA has been completed to investigate recognized environmental conditions (RECs) identified in a Phase I Environmental Site Assessment (Phase I ESA) completed by Converse Consultants in August 2016 (Converse, 2016).

The PEA investigation was conducted in accordance with the work scope provided by the LAUSD (see Appendix A). The PEA Equivalent Report was prepared following the guidelines of the California Environmental Protection Agency (Cal EPA) and Department of Toxic Substances Control (DTSC), as detailed in the *PEA Guidance Manual* (January 1994, Interim Final – Revised October 2013).

1.1 PEA OBJECTIVES

Roosevelt High School is currently an operational LAUSD school scheduled for a comprehensive modernization project involving removal and/or renovation of multiple site structures. The proposed renovation will include demolition of the music building, gymnasium, auditorium/classroom building, industrial arts building, four classroom buildings, and 19 portable classroom buildings. New buildings proposed for construction will include a general classroom building, a science and specialty classroom building, a gymnasium, an auditorium, a lunch shelter, and a health/wellness clinic.

In preparation and prior to the modernization and construction activities, the LAUSD would like to identify any environmental issues in the project area. As previously mentioned, a Phase I ESA was completed by Converse in August 2016 that identified certain potential environmental issues. The purpose of the PEA is to identify if any of the potential issues will need to be mitigated either prior to or during the modernization and renovation effort. The primary objectives of the PEA are as follows:

- 1) Establishing through a field sampling and analysis program the possible presence of potential contaminants in near surface soil and soil gases related to RECs identified in the Phase I ESA and in consideration of historical use of the Site.
- 2) Data derived from the proposed investigation will be evaluated with regard to the following considerations:
 - Evaluate the potential presence of constituents of potential concern in near-surface soil to determine whether special consideration with regard to future soil handling and disposal during the modernization and construction activities is warranted;
 - Determine if the concentrations of constituents of potential concern in near-surface soil exceed health-based screening criteria (residential land-use scenario) for protection of students, faculty, staff, and visitors at the Site;
 - Evaluate the potential existence of methane in the subsurface to determine whether special consideration must be taken with regard to future construction requirements; and
 - If necessary, determine whether further investigation, monitoring, and/or remedial actions are necessary to further define, monitor, or remove contaminants as part of the identified RECs.

Based on the findings of the PEA investigation, the LAUSD will then make an informed decision regarding potential risks posed by the Site. Possible outcomes of the PEA decision include the following:

- Issuance of a “No Further Action” finding if the Site is found not to be significantly impacted, and risks to human health and the environment are found to be within acceptable levels based on the conservative screening level risk assessment;
- Issuance of a “Need for Housekeeping Action” finding if contamination is found and/or soil removal is/will be completed to reduce exposure to contamination discovered during the PEA process;
- Performance of a Supplemental Site Investigation (SSI) if the PEA fails to determine the limits of contamination; or
- Preparation and implementation of a Removal Action Workplan (RAW) if significant impact by hazardous substances release(s) is identified during the field investigation.

1.2 SCOPE OF WORK

The scope of work implemented to prepare this PEA included:

- Scoping discussions with LAUSD representatives;
- Preparing and implementing public notifications;
- Researching available Site background information regarding former and current land use from the previously conducted Phase I ESA;
- Implementing field and laboratory data collection and evaluation to assess environmental conditions at the Site;
- Performing a screening-level human health risk evaluation that assumes a conservative residential land use scenario; and
- Preparing this PEA Equivalent Report.

Numerous information sources were reviewed as part of the background research for development of the PEA Report. However, the Phase I ESA prepared by Converse presents the primary source of information utilized in the PEA Report development. These sources were reviewed to develop an understanding of current and past land uses and practices that may have involved the handling, use, storage, and/or disposal of hazardous substances or wastes.

TRC utilized the information presented in the Phase I ESA as a background search for the Site. The Phase I ESA states that it was completed in accordance with the American Society for Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard E 1527-13). Specific sources of information reviewed and activities performed in conducting the background research include, but are not limited to, the following:

- Site zoning and land-use maps;
- U.S. Geological Survey (USGS) 7½-minute topographic maps;
- Geologic and hydrogeologic maps;
- Sanborn fire insurance maps;
- Building department records;
- Available aerial photographs;
- Environmental database list searches;

- Agency files at Federal, State, and local regulatory agencies and offices for the Site;
- Agency files for listed facilities within ¼ mile of the Site that were identified as having a potential to have impacted the Site;
- Site owner/operator records (if available);
- Site inspections and observations of the Site and surrounding area within ¼ mile;
- Interviews with persons knowledgeable of Site history and operations (if such persons are available);
- Reports of prior investigations and remedial activities performed at the Site; and
- Available applicable information from LAUSD files.

Based on the findings of the Phase 1 ESA, Converse provided the following recommendations as related to the RECs:

- Based on the age of the Site buildings, collect shallow soil samples around the drip lines of the existing and former buildings and analyze them for the potential presence of lead-based paint (LBP) residue, and from around the foundations of the existing and former buildings and analyze them for organochlorine pesticides (OCPs).
- Based on the potential presence of arsenic and polychlorinated biphenyls (PCBs) in shallow soils, collect shallow soil samples across the Site and analyze them for arsenic and PCBs.
- Based on the presence and historical use of the hydraulic hoists and 3-stage clarifier associated with the former auto shop operations (Industrial Arts Building) at the mid-eastern portion of the Site, collect soil samples in these locations to determine whether the subsurface has been impacted from these features.
- Considering that the site is located within the Boyle Heights Oil Field and is within a designated methane zone within the City of Los Angeles, conduct a methane survey in accordance with Los Angeles Department of Building and Safety (LADBS) Site Testing Standards.

Based on the recommendations outlined above, a sampling and analysis program was prepared and implemented to evaluate the potential presence of chemical constituents in shallow soils and soil gas beneath the Site. The Site was divided into six separate investigation areas (Areas 2, 3, 5, 6, 8, and 9; see Figure 2) based on the planned renovation phases. The field and laboratory program included:

- Collection of shallow soil samples at 283 locations across the Site to a depth of 2.5 feet below ground surface (bgs), including 47 locations in Area 2 (physical education building and courts), 48 locations in Area 3 (athletic field and bleachers), 47 locations in Area 5 (auditorium and lunch pavilion), 80 locations in Area 6 (east-central portion of campus), 38 locations in Area 8 (south-central portion of campus), and 23 locations in Area 9 (southeast portion of campus). Soil samples were analyzed for arsenic and lead, and select composite soil samples were further analyzed for OCPs and PCBs.
- Collection of shallow soil samples from an additional 190 borings across the Site to further delineate impacts identified in the initial 283 sampling locations, with sample collection to depths up to 4.5 feet bgs. Soil samples were analyzed for arsenic and lead.
- Collection of soil samples at eight locations near the hydraulic hoists and two locations near the clarifier to evaluate subsurface conditions. Soil borings were advanced to a depth of 10 feet bgs, and soil samples were analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), PCBs, and metals.
- Collection of soil samples at two locations to evaluate undocumented fill materials beneath the Site. Soil borings were advanced to depths of 10 feet and 14 feet bgs, and soil samples were analyzed for TPH, VOCs, SVOCs, PCBs, OCPs, and metals.

- Installation and sampling of nested, multi-depth soil gas probes at 20 locations to evaluate subsurface methane and hydrogen sulfide concentrations. Each location was constructed with sample intakes at depths of 7, 12, and 22 feet bgs (unless drilling refusal occurred), and soil gas concentrations were evaluated using field instrumentation and by collecting samples for laboratory analysis. Soil gas samples were analyzed for methane, hydrogen sulfide, oxygen, carbon dioxide, and VOCs.
- Evaluation of the analytical results, including comparison to accepted background levels and human health-based risk screening levels such as the Environmental Protection Agency (EPA) Region IX Regional Screening Levels (RSLs) and Cal EPA DTSC-modified Screening Levels (i.e., Human and Ecological Risk Office [HERO] Human Health Risk Assessment Note Number 3 values; DTSC, 2015), as appropriate.
- Preparation of this PEA Equivalent Report.

1.3 PEA REPORT FORMAT

This PEA Equivalent Report is organized in general accordance with the format presented in Chapter 3 of the DTSC's *PEA Guidance Manual*. This PEA Report contains the following sections:

- Section 1.0 – Introduction includes PEA objectives, scope of work, and PEA report format.
- Section 2.0 - Site Description includes a description of the Site, LAUSD contact information, and site-specific classification information.
- Section 3.0 - Background includes current/historical Site uses, surrounding land uses, and a summary of prior Site investigations.
- Section 4.0 - Apparent Problem includes a summary of the RECs and potential contaminants of concern.
- Section 5.0 – Environmental Setting summarizes environmental factors related to soil, water, and air pathways.
- Section 6.0 – Soil and Soil Gas Sampling Program summarizes all field and laboratory investigations and results.
- Section 7.0 - Human Health and Ecological Screening Evaluations summarizes potential risks to human health and the environment.
- Section 8.0 - Delineation of Areas of Impacted Soil summarizes areas impacted by arsenic, lead, and petroleum hydrocarbons above applicable screening levels and provides proposed volumes of impacted soil.
- Section 9.0 - Quality Assurance/Quality Control (QA/QC) includes an overview of QA/QC measures conducted during the PEA investigation.
- Section 10.0 - Field Variances includes a summary of deviations from the original PEA work scope.
- Section 11.0 - Conclusions and Recommendations of the PEA.
- Section 12.0 - References cited in the document.

2.0 SITE DESCRIPTION

2.1 SITE NAME AND ADDRESS

Roosevelt High School is located at 456 South Mathews Street in Los Angeles, California (see Figure 1). The property is bounded by South Mathews Street on the northwest, East 4th Street on the northeast, South Mott Street on the southeast, and East 6th Street on the southwest. The school property is a rectangular-shaped parcel containing approximately 23.70 acres of land.

2.2 DESIGNATED CONTACT

The designated contact person for this project is Mr. Dane Robinson, Site Assessment Project Manager, LAUSD (contract professional).

Los Angeles Unified School District
Office of Environmental Health and Safety
333 South Beaudry Avenue, 21st Floor
Los Angeles, CA 90017
(213) 241-4122
dane.robinson@lausd.net

2.3 MAILING ADDRESS

Theodore Roosevelt Senior High School
456 South Mathews Street
Los Angeles, CA 90033

2.4 TELEPHONE NUMBER

Phone: (323) 780-6500
FAX: (323) 269-5473

2.5 OTHER SITE NAMES

Theodore Roosevelt Senior High School
Roosevelt High School

2.6 REGULATORY IDENTIFICATION NUMBERS

The Site is not listed in the DTSC Envirostor database or the State Water Resources Control Board (SWRCB) Geotracker database.

2.7 ASSESSOR'S PARCEL NUMBER

The property has the following Assessor's Parcel Number (APN), as designated by the Los Angeles County Office of the Assessor:

- APN# 5185-004-929

2.8 GEOGRAPHIC COORDINATES

The geographic coordinates for the center of Roosevelt High School are 34.0379 North latitude and 118.2104 West longitude.

2.9 SITE LAND USE AND ZONING

According to the City of Los Angeles Zoning Information and Map Access System (ZIMAS; website ZIMAS.lacity.org), the Site is zoned as follows:

- ZI-2129 – East Los Angeles State Enterprise Zone
- ZI-2452 – Transit Priority Area

2.10 SITE MAPS

The location of Roosevelt High School and surrounding area is presented in Figure 1, and the current layout of the school buildings and outdoor areas is presented on Figure 2. The initial proposed soil and soil gas sampling locations proposed as part of this PEA are presented in Figure 2 and Appendix A. The actual locations completed as part of the investigation are presented on the more detailed Figures 3 through 9, which provide additional detail for Areas 2, 3, 5, 6, 8, 9, and the Industrial Arts Building, respectively.

3.0 BACKGROUND

3.1 CURRENT SITE USE

The Site is currently owned by the LAUSD and operated as Roosevelt High School. The Site is a rectangular-shaped property consisting of approximately 23.70 acres. The current campus facilities consist of 16 structures, including an administration/classroom building, a lunch pavilion, a cafeteria, a library/classroom, a music building, a gymnasium, an auditorium/classroom building, an industrial arts building, a former auto shop building, and seven classroom buildings. The property also includes multiple portable classroom buildings. Athletic fields and facilities are located along the northeast portion of the property, as well as in the southeast corner of the property.

3.2 HISTORICAL SITE USE

Aerial Photographs, Sanborn maps, and other historical documentation indicate that the Site was historically developed with multiple residential dwellings and historical streets (South Fickett Street, Eagle Street, and Lanfranco Street) from as early as 1894. Roosevelt High School was constructed in the central portion of the Site in 1922. Subsequent expansions of the school occurred from the 1940s to the 1970s to include the present-day footprint (Converse, 2016).

3.3 SURROUNDING LAND USES

Properties immediately surrounding the Site to the north across East 4th Street, west across South Mathews Street, and east across South Mott Street consist primarily of residential neighborhoods. The property south of the Site across East 6th Street is developed with the Hollenbeck Middle School. The overall area

surrounding the school consists primarily of residential development with some commercial development (Converse, 2016).

3.4 PRIOR SITE INVESTIGATION

The Phase I ESA identified that a geotechnical investigation to support proposed campus modifications was conducted in 2015 (Converse, 2016). The investigation consisted of five exploratory geotechnical borings to depths between 30 and 50.5 feet bgs, and determined that undocumented fill soils are present to depths ranging from 5 to 14 feet bgs in the borings. No environmental sampling was conducted as part of this investigation.

No other prior investigations were identified by the Phase I ESA (Converse, 2016).

4.0 APPARENT PROBLEM

Based on the findings of the Phase 1 ESA, the PEA field investigation is intended to evaluate the following:

- Based on the age of the Site buildings, there is the potential for LBP residue and OCPs in soil surrounding Site structures;
- Based on previous Site use, there is the potential presence of arsenic and PCBs in shallow soils;
- Based on the presence and historical use of the hydraulic hoists and 3-stage clarifier associated with the former auto shop operations (Industrial Arts Building), there is the potential for leakage from these features; and
- Considering that the site is located within the Boyle Heights Oil Field and is within a designated methane zone in the City of Los Angeles, there is the potential for methane in the subsurface

Therefore, contaminants of potential concern associated with the Site include arsenic, lead, OCPs, PCBs, petroleum hydrocarbons, VOCs, SVOCs, and metals in soil, and methane in subsurface soil gas.

5.0 ENVIRONMENTAL SETTING

5.1 FACTORS RELATED TO SOIL PATHWAYS

5.1.1 Site Topography

The site is located on the eastern portion of the Montebello Plain at an elevation of approximately 313 feet above mean sea level (msl). The topography in the area of the site slopes to the south and southeast. The Elysian Hills are located approximately 2.5 miles north-northwest of the site (California Department of Water Resources [CDWR], 1961, and USGS, 1966).

5.1.2 Proximity to Surface Water Bodies

There are two surface water bodies within a 1-mile radius of the Site. The nearest surface water body is the man-made lake at Hollenbeck Park, located approximately 1,850 feet northwest of the Site. The Los Angeles River, a concrete-lined river channel, is located approximately 4,450 feet to the west (USGS, 1966).

5.1.3 Evidence of Releases to the Environment

During the Phase I ESA site inspection, there was no observed evidence of environmental impacts from a release at the Site (e.g., stained soil, stressed vegetation, etc.).

5.1.4 Site Geology and Soil Types

The Site is located within the Los Angeles Coastal Plain. The Los Angeles Coastal Plain is an alluviated lowland surrounded by the mountains and hills of the Transverse and Peninsular Ranges. Recent alluvium composed of gravel, sand, silt, and clay is present beneath the area of the Site to a depth of approximately 60 feet bgs, and the Lakewood Formation underlies the alluvium. The Lakewood Formation is composed of marine and continental gravel, sand, sandy silt, silt, and clay with shale pebbles (CDWR, 1961).

5.1.5 Oil and Gas Review

A review of the Division of Oil, Gas and Geothermal Resources (DOGGR) online well-finder database (<http://www.conservation.ca.gov/dog/Pages/Wellfinder.aspx>) indicates that the Site is located within the Boyle Heights Oil Field (abandoned). No active or abandoned oil wells are located at the Site. There are a total of five abandoned oil wells located within a 0.5-mile radius of the Site. Refer to Appendix B for additional details regarding the Boyle Heights Oil Field and the five abandoned oil wells located near the site.

In addition, per Figure IV.F-2, LADBS Methane and Methane Buffer Zone Map, the Site is located within the City of Los Angeles Methane Zone.

5.1.6 Proximity to Nearby Receptors

TRC assessed other potential receptors within a 1-mile radius of the Site including hospitals, schools, child day care centers, and senior day care centers. In consideration of the available information in the public domain for the Site (Google Earth, 2017), below are the summarized results.

- There are three hospitals and/or medical facilities located within 1 mile of the Site. The closest facility is the Los Angeles Christian Health Center (1625 East 4th Street), which is located approximately 4,000 feet northwest of the Site.
- There are 10 schools located within 1 mile of the Site. The closest school is Hollenbeck Middle School (2510 East 6th Street), which is due south/southwest of the Site across East 6th Street.
- There are three daycare facilities within 1 mile of the Site. The closest facility is the Salesian Family Youth Center (2228 East 4th Street), which is located 1,470 feet northwest of the site.
- There are three senior care facilities within 1 mile of the Site. The closest facility is the Boyle Heights Senior Center (2839 East 3rd Street), which is located 1,560 feet east of the Site.

5.2 FACTORS RELATED TO WATER PATHWAYS

5.2.1 Groundwater

5.2.1.1 *Site Hydrogeologic Setting*

The site is located within the Los Angeles Forebay area of the Central Groundwater Basin of the Los Angeles-San Gabriel Hydrologic Unit. The Central Groundwater Basin is one of four basins designated in the Los Angeles Coastal Plain (Santa Monica Basin, the West Coast Basin, the Hollywood Basin, and the Central Basin). The Central Basin is bounded on the north by the Hollywood Basin and a series of low hills extending from the Elysian Hills on the northwest to the Puente Hills on the southeast, on the west and south by the Newport-Inglewood fault zone, and on the southeast by the Los Angeles-Orange County line (CDWR, 1961).

The first groundwater production zones in the area of the site are the Gasper and Exposition Aquifers (CDWR, 1961). Groundwater in the area of the site has been designated as having beneficial use for municipal, industrial process, and agricultural applications (CRWQCB, 1994).

5.2.1.2 *Impacted Aquifers from Site Releases*

No evidence has been found to suggest a release or threatened release from the Site to groundwater. Therefore, aquifers are not known or suspected to have been impacted from Site releases.

5.2.1.3 *Nearby Groundwater Wells*

According to the Los Angeles County Department of Public Works Hydrologic Records Division website (<http://dpw.lacounty.gov/general/wells>), there are no active wells located within a 1-mile radius of the Site (LADPW). The nearest well is located over 1 mile to the southwest of the Site (State Well ID 2S13W10A01), near the intersection of East 12th Street and South Soto Street. The depth to water measured in this well in May 2017 was 244.60 feet bgs. Only limited information was available for this well.

The nearest groundwater monitoring wells to the Site as found on the SWRCB Geotracker website are approximately 450 feet northwest of the Site. The wells were installed as part of an open Leaking Underground Storage Tank case (Los Angeles Regional Water Quality Control Board [LARWQCB] Case #900330416) at the Winall Oil Co. service station located at 401 S. Soto Street, which is located at the southwest corner of Soto Street and 4th Street. The depth to groundwater was most recently measured in the seven wells on that property in November 2016, and the depths ranged from approximately 42 to 54 feet bgs. In addition, liquid-phase hydrocarbons were measured in 6 of the 7 wells at a maximum thickness of 0.12 foot. The groundwater flow direction beneath the Winall site is reportedly toward the north (Economy Environmental, Inc., 2017).

According to the Phase I ESA report, the Environmental Data Resources (EDR) Radius Report, there are no public water supply wells within a 1-mile radius of the Site (Converse, 2016).

5.2.2 Surface Water

No surface water bodies exist on the Site or surrounding area. Therefore, surface water sampling was not performed as a component of this investigation. With the exception of planter areas and the grass-covered

athletic fields, the surface of the Site is covered with asphalt, concrete or buildings. Storm water from the Site is directed by curb and gutter systems toward the City-maintained storm sewer system.

5.3 FACTORS RELATED TO AIR PATHWAYS

Based on the current Site development (e.g., asphalt and concrete paving and school buildings and structures), potential emissions from soil are considered to be insignificant under current conditions. There is no documentation of a release of hazardous substances to the atmosphere. Future Site development activities would result in the removal of asphalt and concrete paving and certain buildings and structures that could increase the potential for fugitive dust generation. Potential sources of a hazardous substances release to the atmosphere are limited to fugitive dust from surface soils. Therefore, the potential for releases of hazardous substances from the Site to the atmosphere is considered to be *de minimis*. Sensitive receptors in the vicinity of the Site (within 1 mile) are discussed above in Section 5.1.6.

6.0 SOIL AND SOIL GAS SAMPLING PROGRAM

TRC completed a PEA field investigation consisting of an extensive soil and soil gas sampling program to investigate the RECs identified in the Phase I ESA and to prepare the Site for the modernization and construction activities. The following sections describe the sampling strategy, investigation methods and procedures, sample handling and storage, decontamination procedures, and management of waste materials for the PEA investigation. Soil samples were collected within the project area in accordance with DTSC's PEA Guidance Manual and DTSC's *Interim Guidance for Evaluation of School Sites with Potential Soil Contamination as a Result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers* (DTSC, 2006). Soil gas probe installation and sampling was conducted in general accordance with the guidelines provided by the *DTSC Advisory – Active Soil Gas Investigations* (DTSC, 2015). This investigation was conducted under the direct supervision of the California-licensed Professional Geologist whose certification and signature appear on the title page of this report.

Site access and notification of school administrative personnel were coordinated with the LAUSD Project Manager, the LAUSD Facilities Plant Manager, and the school Plant Manager. Field sampling activities were supported by Subsurface Surveys and Associates, Inc. (geophysical survey and utility clearance) and Environmental Support Technologies, Inc. (drilling and soil gas probe installation, sample collection, and analysis).

6.1 SUMMARY OF ACTIVITIES

The PEA sampling program consisted of shallow soil sampling in the areas of existing buildings, common areas, athletic fields, and parking lots planned for removal/replacement and construction, and soil gas sampling was conducted across the entire Site to evaluate for the potential presence of subsurface methane. It should be noted that some boring locations were moved from their originally proposed locations, co-located with samples collected for other purposes, or removed from the soil sampling program due to logistical challenges (e.g., utility conflicts, presence of overlying structures, or limited work areas). A general summary of the PEA sampling program is presented below.

Initial PEA investigation activities were conducted on October 3, and the weekends of October 8-9, 15-16, 22-23, and 29-30, 2016, and field sampling activities included the following:

- collection of shallow soil samples at a total of 283 locations across the Site, including 47 locations in Area 2 (physical education building and courts), 48 locations in Area 3 (athletic field and bleachers), 47 locations in Area 5 (auditorium and lunch pavilion), 80 locations in Area 6 (east-central portion of campus), 38 locations in Area 8 (south-central portion of campus), and 23 locations in Area 9 (southeast portion of campus);
- collection of soil samples at two (2) locations to evaluate undocumented fill beneath the Site;
- collection of soil samples at eight (8) locations near the hydraulic hoists and two (2) locations near the clarifier to evaluate subsurface conditions; and
- installation of nested, multi-depth soil gas probes at 20 locations to evaluate subsurface methane and hydrogen sulfide concentrations.

Based on results of the initial investigation activities, additional investigation was conducted on November 21-23 and December 21, 2016, and March 25-26 and June 14, 2017. These field sampling activities consisted of the following:

- collection of shallow soil samples from an additional 190 borings to further assess the vertical extent (42 borings in previously sampled locations) and lateral extent (148 borings in new locations) of soil impacts identified in the initial 283 locations sampled in October 2016; and
- collection of additional soil gas samples from the nested, multi-depth soil gas probes installed in October 2016.

The soil and soil gas sampling programs are summarized in Tables 1 through 3, and the boring and sampling locations are presented on Figures 2 through 9.

6.2 PRE-FIELD ACTIVITIES

6.2.1 Work Notice

Prior to the initiation of field investigation activities, a PEA Work Notice was prepared in English and Spanish to advise the public of the upcoming PEA field investigation, the schedule of environmental field work, and contact information for questions and comments. The Work Notice was distributed as follows on September 21, 2016: 1) approximately 2,600 copies were mailed to parents of Roosevelt High School students and key contacts; 2) 200 copies were provided to LAUSD for placement in the Roosevelt High School main office; 3) approximately 250 copies of the Work Notice were hand delivered to residents and businesses in the immediate vicinity of the Site; and 4) laminated copies of the Work Notice were posted on fencing along the school perimeter. A copy of the PEA Work Notice is included in Appendix C.

6.2.2 Site Clearance and Geophysical Survey

Clearance of utilities and other underground obstacles was conducted prior to initiating any subsurface investigation activities. Underground Service Alert (USA) was notified a minimum of two business days prior to commencing intrusive work at the Site, and the proposed boring locations were marked in the field with chalk or chalk-based paint according to USA requirements. The USA tickets were maintained for the duration of the field investigation.

In addition, geophysical surveys were conducted on October 3, 2016, and March 25-26 and June 14, 2017, to clear proposed sampling locations within the project area. The geophysical survey utilized electro-magnetic and ground penetrating radar to locate the underground utility lines and subsurface features and structures prior to the initiation of intrusive investigation activities. Copies of the three Geophysical Investigation Reports are included in Appendix D.

6.2.3 Health and Safety

A comprehensive health and safety plan (HASP) was prepared for the PEA field investigation activities conducted at the Site. The intent of the HASP was to include protocols to be followed during investigation activities and to ensure the health and safety of on-Site project employees, subcontractors, visitors, and the public during all Site work. The HASP identified policy, procedures, and systems to be followed by project personnel, and was required to be followed and signed by TRC employees, subcontractors, vendors, visitors, and agency representatives at the Site.

The HASP was implemented in conjunction with other TRC health and safety programs, including the TRC Injury and Illness Prevention Program (IIPP). In addition, project procedures guided the job safety analysis (JSA) documents created for critical work, safety task assignments used daily to direct that day's activity, as well as additional postings, signs, or informational memos regarding safety.

A copy of the HASP was readily available during field activities. On the morning of each day of field activities, a health and safety meeting was conducted with all Site workers to discuss the health and safety issues and concerns related to the specific work, including safety concerns regarding coordination of investigation activities. All Site workers were required to review and sign the TRC HASP before conducting work at the Site. In addition, Site workers met the training requirements specified in the Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations and Emergency Response (HAZWOPER) Standard (29 CFR 1910.120[e]).

6.4 SOIL SAMPLE COLLECTION AND ANALYSIS

6.4.1 Sample Locations and Rationale

The PEA soil sampling program and protocol varied by boring type and considered the analyte(s) of interest at each respective boring location and Site area. Depending on the analytical results of the shallowest soil sample relative to either accepted background concentrations or selected human health-based screening levels, deeper soil samples were subsequently collected and analyzed to define the vertical extent of impact, and step-out borings were sampled to further define the lateral extent of apparent impact. For the purpose of this evaluation, human health-based screening levels were established based on a combination of the EPA Region IX RSLs and Cal EPA DTSC-modified Screening Levels (DTSC-SLs; DTSC, 2015). The decision criteria for determining whether analysis of deeper soil samples from a specific boring or collection of step-out samples lateral to an initial boring location was warranted is outlined below:

- Arsenic soil samples were screened utilizing the accepted background concentration of 12 milligrams per kilogram (mg/kg);
- Lead soil samples were screened utilizing the DTSC Residential Screening Level of 80 mg/kg;
- Petroleum hydrocarbons were screened using 100 mg/kg for gasoline-range hydrocarbons (TPH-G), 1,000 mg/kg for diesel-range hydrocarbons (TPH-D), and 1,000 mg/kg for oil-range hydrocarbons (TPH-O);

- VOCs were screened utilizing a combination of RSLs and human health-based screening criteria based on the individual chemical or compound;
- PCBs were screened utilizing the RSLs for Residential Land Use (value varies by PCB constituent); and
- OCPs were screened utilizing the RSLs for Residential Land Use (value varies by OCP constituent).

6.4.1.1 Shallow Soil Borings to Assess Arsenic, Lead, OCPs, and PCBs (473 Borings)

The initial work scope included sample collection at 283 boring locations. Most of these locations were located in asphalt- or concrete-covered locations and required coring prior to sampling. Once the locations were cleared and cored, soil samples were collected using a hand auger. All locations were sampled to a depth of 2.5 feet bgs, with sample collection at 0.5 and 2.5 feet bgs. Based on results of laboratory analysis of these initial samples, additional sampling was conducted at locations where applicable screening levels were exceeded. This additional work scope included collection of deeper samples at impacted locations to evaluate the vertical extent of soil impact (42 existing locations), and collection of samples at additional step-out locations to assess the lateral extent of soil impact (148 additional locations). The initial lateral step-out borings were designated with an “a”, “b”, “c”, and/or “d” based on their location north, east, south, and west of the original sampling location, respectively (e.g., Boring H-2 in Area 2 required additional lateral assessment, so Borings H-2a, H-2b, H-2c, and H-2d were sampled north, east, south, and west of the initial location, respectively). Subsequent lateral assessment borings were designated with a “1” to demonstrate an additional step-out location to an initial step-out location (e.g., the step-out for Boring H-2b was designated H-2b1). Samples for arsenic and lead analysis were collected as discrete samples at each location, and samples for OCP and PCB analysis were composited at the laboratory from two to four discrete samples collected from select locations. See Figures 2 through 8 for the soil sampling locations, and Table 1 for a summary of the samples collected.

6.4.1.2 Borings at Hydraulic Hoists and Clarifier (10 Locations)

On October 22, 2016, a total of 10 soil borings was sampled to evaluate subsurface conditions in the area of the four hydraulic hoists and the wastewater clarifier located at the Industrial Arts Building in Area 6. The borings were sampled using direct-push sampling techniques. The eight soil borings advanced at the hydraulic hoist locations (HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, and HL4-2) were sampled to a depth of 10 feet bgs, with sample collection at depths of 0.5, 2, 5, and 10 feet bgs. The two soil borings advanced at the clarifier location (CL1 and CL2) were sampled to a depth of 10 feet bgs, with sample collection at depths of 2, 5, and 10 feet bgs. Soil samples collected from borings at the hydraulic hoists were analyzed for petroleum hydrocarbons, PCBs, and metals, and soil samples collected from borings at the clarifier were analyzed for petroleum hydrocarbons, VOCs, SVOCs, and metals. Soil samples intended for TPH-G and VOC analysis were collected in accordance with EPA Method 5035. See Figure 9 for the soil sampling locations, and Table 2 for a summary of the samples collected.

6.4.1.3 Borings to Evaluate Undocumented Fill Materials (2 Locations)

On October 22, 2016, two soil borings (FILL-1 and FILL-2) were advanced to evaluate undocumented fill materials in the north-central portion of the Site in Area 2 and in the south-central portion of the Site in Area 8. The borings were sampled using direct-push sampling techniques. Boring FILL-1 was sampled to a depth of 10 feet bgs, with soil sample collection at depths of 2, 5, and 10 feet bgs, and Boring FILL-2 was sampled to a depth of 14 feet bgs, with soil sample collection at depths of 2, 5, 10, and 14 feet bgs. Soil

samples were analyzed for petroleum hydrocarbons, VOCs, SVOCs, OCPs, PCBs, and metals. Soil samples intended for TPH-G and VOC analysis were collected in accordance with EPA Method 5035.

6.4.2 Boring Advancement and Sample Collection Procedures

Sample collection from the shallow soil borings across the Site was conducted using a hand auger. The hand auger samples were collected by manually advancing a 1.5-inch diameter auger core barrel to predetermined sample depths, and then the soil samples were transferred from the core barrel to 4-ounce glass jars.

The borings at the hydraulic hoists, clarifier, and to document fill material were advanced using a direct-push drill rig to the target sampling depths between 10 and 14 feet bgs. Direct-push drilling rigs utilize both weight and percussion to drive a 4-foot long core barrel sampler attached to the drill rod. The core-barrel was lined with a 2-inch diameter acetate sleeve and the probe tip was opened to allow soil to enter the core barrel as it was driven into the soil. The liner containing the soil core was then removed for soil logging and sample collection. The sampler was then rinsed, re-lined with a new acetate sleeve, and prepared for the next boring.

Soil borings at the hydraulic hoists, clarifier, and to document fill material were logged in accordance with the Unified Soil Classification System (USCS). After logging the soil, a 0.5-foot long sample was cut from the acetate core at the desired sampling interval and collected for analysis. Additional soil from the core was screened with a photoionization detector (PID) and recorded on the boring log. The sample collected for analysis was capped with Teflon® sheeting and plastic end caps, and then placed into a cooler chilled to 4 degrees Celsius for transport to the laboratory.

Waste materials generated during the investigation were placed in labeled, Department of Transportation (DOT)-approved, 55-gallon steel drums for temporary storage prior to disposal.

All soil samples were submitted under proper chain of custody protocols to Advanced Technology Laboratories (ATL), a California State-certified analytical laboratory, for analysis.

6.4.2.1 *Soil Description*

During this investigation, boring logs were completed only for soil borings that extended to 10 feet bgs or deeper (includes eight borings at the hydraulic hoists, two borings at the clarifier, and two borings to evaluate fill materials). Each log recorded the following sampling information: boring number and location; sample identification numbers; date and time; sample depth; soil description in accordance with the USCS; description of any visible evidence of soil contamination (i.e., odor or staining), and PID readings. Copies of the boring logs are provided in Appendix E.

A PID was used for both field screening and health and safety monitoring during soil sampling activities. PID data were used as an immediate indicator of volatile organic vapors in subsurface materials. The PID was calibrated to display concentration in units equivalent to parts per million (ppm). A span gas containing isobutylene at 100 ppm in air was used to set the sensitivity. The instrument was calibrated daily following manufacturer specifications.

6.4.2.2 Decontamination

All equipment that came into contact with potentially contaminated soil was decontaminated to ensure the quality of samples collected. Disposable equipment intended for one-time use was not decontaminated, but packaged for appropriate disposal. Decontamination occurred prior to and after each use of a piece of equipment. All drilling and sampling devices used were decontaminated in a pre-designated area using the following procedures:

- Non-phosphate detergent and tap water wash, using a brush if necessary;
- Tap-water rinse;
- Initial deionized/distilled water rinse; and
- Final deionized/distilled water rinse.

Decontamination fluids generated during the investigation were placed in labeled, Department of Transportation (DOT)-approved, 55-gallon steel drums for temporary storage prior to disposal.

6.4.2.3 Field Equipment Blank Samples and Trip Blank Samples

Thirty-two (32) field equipment blank water samples were collected during investigation activities. The field equipment blank samples were collected by pouring laboratory-provided de-ionized water over decontaminated drilling equipment, such as the core sampler. The water was collected in laboratory-provided water sampling containers. The containers were handled in the same fashion as other samples (i.e., placed in a cooler with ice and identified on the COC) and delivered to the laboratory for analysis with other samples collected the same day.

In addition, two laboratory-supplied trip blank samples were obtained from the laboratory and used to accompany all samples intended for VOC analysis.

6.4.3 Sample Handling Procedures

Soil sample containers for the shallow hand auger borings consisted of 4-ounce laboratory supplied glass jars, soil sample containers for the direct-push borings consisted of acetate liners, and equipment blank sample containers consisted of laboratory-provided water sample containers. To identify and manage samples obtained in the field, a sample label was affixed to each sample container. The sample labels included the following information:

- Project number;
- Site name;
- Boring number;
- Sample identification number;
- Sampler's initials; and
- Date and time of collection.

Following collection and labeling, samples were immediately placed in a sample cooler for temporary storage. The following protocol was followed for sample packaging:

- Sample containers were placed in clear, plastic, leak-resistant bags prior to placement in the ice chest;
- Ice was placed in leak-resistant plastic bags and included in the coolers to keep samples at a chilled temperature during transport to the analytical laboratory; and
- The COC form was placed in a water-resistant plastic bag and taped on the inside of the lid of the cooler.

Self-adhesive custody seals were not used as the samples were transferred directly from field personnel to laboratory personnel.

Field notes and COC forms were used to record the following information during the collection of each sample:

- Sample identification number;
- Sample location and description;
- Site sketch showing sample location and measured distances;
- Sampler's name(s);
- Date and time of sample collection;
- Designation of sample as composite or grab;
- Type of sample (e.g., matrix);
- Type of preservation;
- Type of sampling equipment used;
- Field observations and details important to analysis or integrity of samples (e.g., heavy rains, odors, colors, etc.);
- Instrument readings (i.e., PID);
- COC form numbers and COC seal numbers;
- Transport arrangements (e.g., courier delivery, lab pickup, etc.); and
- Recipient laboratory(ies).

6.4.4 Soil Matrix Analytical Procedures

All samples collected during the investigation were submitted to Advanced Technology Laboratories, Inc. (ATL), a California State-certified analytical laboratory, for analysis. Samples were transported to the laboratory upon completion of each field day.

The following samples (including field QC samples) were collected and analyzed as part of the PEA field investigation:

- 799 soil samples for arsenic using EPA Method 6010B (716 discrete samples and 83 duplicates);
- 936 soil samples for lead using EPA Method 6010B (841 discrete samples and 95 duplicates);
- 92 soil samples for OCPs using EPA Method 8081A (83 composite samples and 9 duplicates);
- 14 soil samples for PCBs using EPA Method 8082 (12 composite samples and 2 duplicates);
- 90 soil samples for Soluble Threshold Limit Concentration (STLC) lead using EPA Method 6010B (84 discrete samples and 6 duplicates);
- 1 soil sample for STLC arsenic using EPA Method 6010B;

- 57 soil samples for Toxicity Characteristic Leaching Procedure (TCLP) lead using EPA Method 6010B (52 discrete samples and 5 duplicates);
- 2 discrete soil samples for TPH-G using EPA Method 8015M/5035;
- 46 soil samples for TPH-D and TPH-O using EPA Method 8015M (40 discrete samples, 2 composite samples, and 4 duplicates);
- 11 soil samples for VOCs using EPA Method 8260B/5035 (10 discrete samples and 1 duplicate);
- 11 soil samples for SVOCs using EPA Method 8270C (8 discrete samples, 2 composite samples, and 1 duplicate);
- 46 soil samples for Metals using EPA Methods 6010B/7471A (40 discrete samples, 2 composite samples, and 4 duplicates);
- Field equipment blanks collected during the shallow soil boring investigation across the site were analyzed for arsenic and lead using EPA Method 6010B, OCPs using EPA Method 8081A, and PCBs using EPA Method 8082;
- Field equipment blanks collected during the remaining investigation work (e.g., hydraulic hoists, clarifier, and fill material evaluation) were analyzed for petroleum hydrocarbons using EPA Method 8015M, VOCs using EPA Method 8260B, SVOCs using EPA Method 8270C, PCBs using EPA Method 8082, and Metals using EPA Methods 6010B/7471A; and
- Trip blank samples were analyzed for VOCs using EPA Method 8260B.

Results of laboratory analysis of soil samples collected during the PEA investigation are summarized in Tables 1 and 2. Chain of custody protocol was followed for all samples selected for laboratory analysis. The chain of custody form accompanied the samples from the sampling locality to the laboratory, providing a continuous record of possession prior to analysis. Copies of the official laboratory reports and chain of custody records are included in Appendix F.

Analyte detections noted in the tables with a J (J-flagged) indicate that the analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit (reported value is estimated).

6.4.5 Summary of Analytical Results

Results of laboratory analysis of soil samples collected during the PEA investigation are summarized below (see Tables 1 and 2).

6.4.5.1 *Arsenic*

Arsenic was detected at concentrations exceeding the soil screening level of 12 mg/kg in 48 boring locations across the Site. This includes 11 boring locations in Area 3 (maximum 41 mg/kg in Boring B-13 at 0.5 foot bgs), 25 boring locations in Area 6 (maximum 66 mg/kg in Boring IM-3c at 0.5 foot bgs), and 12 boring locations in Area 9 (maximum 16 mg/kg in Boring Y-17 at 0.5 foot bgs). See Figures 4A, 6A, and 8A for the distribution of arsenic impacts in Areas 3, 6, and 9, respectively.

Based on results of the investigation, one soil sample with the highest arsenic concentration was analyzed for arsenic STLC (66 mg/kg in Boring IM-3c at 0.5 foot bgs). The arsenic STLC concentration for this sample was 4.1 milligrams per kilogram (mg/L). This result indicates that arsenic-impacted soil identified during this investigation would be considered as non-hazardous upon removal.

6.4.5.2 Lead

Lead was detected at concentrations exceeding the soil screening level of 80 mg/kg in 66 boring locations across the Site. This includes 10 boring locations in Area 2 (maximum 280 mg/kg in Boring B-6b at 2.5 feet bgs), 9 boring locations in Area 3 (maximum 180 mg/kg in Boring B-15b at 0.5 foot bgs), 15 boring locations in Area 5 (maximum 4,300 mg/kg in Boring AUD-3a at 0.5 foot bgs), 27 boring locations in Area 6 (maximum 4,200 mg/kg in Boring Q15a at 2.5 feet bgs), and 5 boring locations in Area 9 (maximum 6,300 mg/kg in Boring W-14a at 0.5 foot bgs). See Figures 3A, 4A, 5A, 6A, and 8A for the distribution of lead impacts in Areas 2, 3, 5, 6, and 9, respectively.

Based on results of the investigation, three soil samples collected during the investigation contained a lead concentration exceeding 1,000 mg/kg (identified above as the maximum concentrations in Areas 5, 6, and 9). In addition, 84 samples (and 6 duplicates) were analyzed for lead STLC. The lead STLC concentrations ranged from 1.3 mg/L to 190 mg/L (Boring Q15a at 2.5 feet bgs). A total of 52 of the 84 lead STLC analyses exceeded the 5.0 mg/L threshold. Therefore, these samples were further analyzed for lead by TCLP. Lead TCLP concentrations in these samples ranged from 0.25 mg/L to 1.7 mg/L, below the TCLP threshold of 5.0 mg/L. These results indicated that a portion of the lead-impacted soil identified during this investigation would be considered representative of California (non-Resource Conservation and Recovery Act [RCRA]) hazardous waste upon removal.

6.4.5.3 OCPs

Detectable OCPs were reported in the composite soil samples collected from the shallow soil borings across the Site as follows:

- Dieldrin at concentrations ranging from 2.6 to 13 micrograms per kilogram ($\mu\text{g/kg}$) in 9 of 92 samples analyzed;
- 4,4'-DDD at a concentration of 5.0 $\mu\text{g/kg}$ in 1 of 92 samples analyzed;
- 4,4'-DDE at concentrations ranging from 2.0 to 400 $\mu\text{g/kg}$ in 11 of 92 samples analyzed;
- 4,4'-DDT at concentrations ranging from 2.3 to 18 $\mu\text{g/kg}$ in 9 of 92 samples analyzed;
- alpha-Chlordane at concentrations ranging from 1.2 to 30 $\mu\text{g/kg}$ in 11 of 92 samples analyzed;
- gamma-Chlordane at concentrations ranging from 1.2 to 30 $\mu\text{g/kg}$ in 11 of 92 samples analyzed; and
- Chlordane at concentrations ranging from 9.2 to 270 $\mu\text{g/kg}$ in 12 of 92 samples analyzed.

All OCP concentrations were below their respective health-based screening levels. As such, the concentrations of OCPs in the soil indicate it is not a hazardous or regulated waste.

In addition, no OCPs were detected above laboratory reporting limits in soil samples collected from Borings FILL-1 and FILL-2.

6.4.5.4 PCBs

No PCBs were detected above laboratory reporting limits during this investigation.

6.4.5.5 VOCs

No VOCs were detected above laboratory reporting limits during this investigation.

6.4.5.6 SVOCs

No SVOCs were detected above laboratory reporting limits during this investigation.

6.4.5.7 Petroleum Hydrocarbons

Petroleum hydrocarbons were detected in soil samples collected to evaluate the hydraulic hoists, clarifier, and fill materials as follows:

- TPH-G: no detectable concentrations were reported above laboratory reporting limits.
- TPH-D: detectable concentrations were reported in samples collected near the hydraulic hoists (maximum 1,900 mg/kg in Boring HL2-2 at 5.0-5.5 feet bgs), clarifier (maximum 4.2 mg/kg in Boring CL1-2 at 2.0-2.5 feet bgs), and in fill materials (maximum 1.7 mg/kg in the composite sample from Boring FILL-1).
- TPH-O: detectable concentrations were reported in samples collected near the hydraulic hoists (maximum 4,700 mg/kg in Boring HL2-2 at 5.0-5.5 feet bgs), clarifier (maximum 7.3 mg/kg in Boring CL1-2 at 0.5-1.0 foot bgs), and in fill materials (maximum 3.4 mg/kg in the composite sample from Boring FILL-1).

Based on these investigation findings, only the soil sample collected from Boring HL2-2 at 5.0-5.5 feet bgs contains detectable TPH-D and TPH-O concentrations exceeding the soil screening criteria of 1,000 mg/kg.

6.4.5.8 Metals

Metals concentrations detected above laboratory reporting limits in soil samples collected to evaluate the hydraulic hoists, clarifier, and fill materials included arsenic, barium, chromium, cobalt, copper, lead, molybdenum, nickel, vanadium, and zinc. The concentrations detected were consistent with background concentrations for California soils (Kearney, 1996), including arsenic (maximum 6.4 mg/kg in Boring CL1-1 at 9.5 feet bgs) and lead (maximum 17 mg/kg in Boring HL3-2 at 9.5 feet bgs).

6.5 SOIL GAS SAMPLING AND ANALYSIS

6.5.1 Sample Locations and Rationale

The soil gas sampling investigation consisted of the installation and sampling of nested, multi-depth soil gas probes at 20 locations across the Site to evaluate subsurface methane and hydrogen sulfide concentrations. Each location was proposed for construction with sample intakes at depths of 7, 12, and 22 feet bgs (unless drilling refusal occurred), and soil gas concentrations were to be evaluated using field instrumentation and by collecting samples for laboratory analysis for methane, hydrogen sulfide, oxygen, carbon dioxide, and VOCs.

6.5.2 Methane Probe Installation

On October 8, 9, and 12, 2016, 51 nested methane probes were installed using direct-push techniques at 20 locations across the Site (see Figure 2). The proposed installation depths for the methane probes were at 7, 12, and 22 feet bgs at each location. The actual depths of the methane probes were adjusted based on the depth at which refusal was encountered during installation activities with the direct-push rig. The methane probes were constructed of Nylaflo tubing with 3-inch long plastic implant tips set within a

1-foot thick filter pack of Number 2/16 sand. Approximately 1 foot of dry granular bentonite was placed above the sand filter pack and the remaining portion of the annulus was backfilled with hydrated bentonite. A three-way valve was installed at the top of the tubing for each probe. A summary of the depth of the methane probes is presented below and copies of the boring logs are included in Appendix E.

LOCATION	PROBE DEPTHS (feet bgs)
M1	7, 12, and 22
M2	7, 12, and 22
M3	7, 12, and 22
M4	7, 12, and 22
M5	7, 12, and 22
M6	7 and 12
M7	7
M8	7, 12, and 16
M9	7, 12, and 22
M10	7 and 12
M11	7 and 12
M12	7, 12, and 16
M13	7 and 12
M14	7 and 12
M15	7, 12, and 22
M16	7 and 12
M17	7, 12, and 19
M18	7, 12, and 22
M19	7 and 12
M20	7, 12, and 22
Note: bgs = below ground surface	

6.5.3 Methane Probe Monitoring and Sampling

On October 15, 2016, initial methane probe monitoring activities were conducted. A pressure meter and a RKI Eagle Portable Multi-Gas Detector (calibrated at 12% oxygen [O₂]) were used to measure pressure, methane, O₂, hydrogen sulfide (H₂S), and carbon dioxide (CO₂) at each of the 51 methane probes.

On October 16, 2016, additional methane probe monitoring and sampling activities were conducted. Pressure, methane, O₂, H₂S, and CO₂ measurements were collected from each of the 51 methane probes using the instrumentation described above. Following probe measurement activities, vapor samples were collected from Methane Probes M1 at 22 feet, M5 at 7 feet, M5 at 12 feet, M5 at 22 feet, M9 at 12 feet, M9 at 22 feet, M15 at 12 feet, M15 at 22 feet, M20 at 7 feet, and M20 at 12 feet (a total of 10 samples and one duplicate sample) and submitted to a State certified laboratory for analysis. A vacuum box was used to collect the vapor samples in two 1 liter Tedlar bags from each of the selected probes after purging.

On March 19, 2017, additional methane probe monitoring and sampling activities were conducted. Measurements were collected from only 35 methane probes during this event. Five sets of probes (M1,

M2, M4, M7, and M18) could not be located; all of these probe locations had been installed within either grass or dirt areas. All three probes at Location M5 were missing the surface valve and contained water. In addition, the following probes contained water and could not be measured: M17 at 22 feet, M20 at 7 feet, M20 at 12 feet, and M20 at 22 feet. A pressure meter was used to measure the pressure at each probe. A vacuum box was then used to collect vapor samples in two 1-liter Tedlar bags (labeled No. 1 and 2) from each of the 35 probes after purging. A RKI Eagle Portable Multi-Gas Detector was used to collect measurements of O₂, H₂S, and methane from Tedlar Bag No. 1 for each probe.

Following probe measurement activities, the Tedlar bags collected from the five probes exhibiting the highest methane concentrations (Probes M5 at 12 feet, M9 at 7 feet, M17 at 7 feet, M17 at 12 feet, and M19 at 12 feet) were submitted to a State certified laboratory for analysis. Both Tedlar bags for each probe location were submitted for use by the laboratory. However, it was requested that the laboratory use Tedlar Bag No. 1 for all analyses; Tedlar Bag No. 2 was submitted to the laboratory as a backup sample.

A summary of the field measurements is presented in Table 3A and copies of the field sheets are included in Appendix G.

6.5.4 Laboratory Analysis of Soil Gas Samples

Vapor samples collected in October 2016 were submitted to a State-certified laboratory and analyzed for the following:

- Methane using EPA Method TO3M;
- H₂S using EPA Method 6;
- O₂ and CO₂ using ASTM D1946; and
- VOCs using EPA Method TO15M.

Vapor samples collected in March 2017 were submitted to a State-certified laboratory and analyzed for methane using EPA Method TO3M.

Results of laboratory analysis of vapor samples are presented in Tables 3A and 3B. Chain of custody protocol was followed for all samples selected for laboratory analysis. The chain of custody form accompanied the samples from the sampling locality to the laboratory, providing a continuous record of possession prior to analysis. Copies of the official laboratory reports and chain of custody records are included in Appendix H.

6.5.5 Methane Probe Abandonment

On April 13, 2017, the methane probes were abandoned by either pulling the tubing, or capping the tubing with a metal screw (if the tubing could not be removed) and covering each location with clean soil. The surface of each methane probe location was resurfaced with either rapid set concrete (for areas within paving) or grass/soil (for locations within the unpaved areas).

6.5.6 Findings

6.5.6.1 *Field Measurements*

October 15, 2016

- Pressure readings ranged from 0 to 0.23 inches of water column (IWC; maximum pressure in Probe M5 at 22 feet).
- Methane concentrations ranged from 0 to 24,500 parts per million by volume (ppmv; maximum concentration in Probe M20 at 12 feet).
- H₂S concentrations ranged from 0 to 34.5 ppmv (maximum concentration in Probe M20 at 12 feet).
- O₂ concentrations ranged from 2.3 to 20.8 percent (maximum concentration in Probes M18 at 7 feet and M19 at 7 feet).
- CO₂ concentrations ranged from 900 ppmv to greater than 5 percent (maximum concentrations in Probes M5 at 7 feet, M5 at 12 feet, M5 at 22 feet, M13 at 12 feet, M15 at 7 feet, M15 at 12 feet, and M15 at 22 feet).

October 16, 2016

- Pressure readings ranged from 0 to 0.05 IWC (maximum pressure in Probe M5 at 22 feet).
- Methane concentrations ranged from 0 to 7,500 ppmv (maximum concentration in Probe M20 at 12 feet).
- H₂S concentrations ranged from 0 to 3 ppmv (maximum concentration in Probe M20 at 12 feet).
- O₂ concentrations ranged from 7.2 to 20.9 ppmv (maximum concentration in Probes M9 at 22 feet, M19 at 7 feet, and M19 at 12 feet).
- CO₂ concentrations ranged from 2,330 ppmv to greater than 5 percent (maximum concentrations in Probes M5 at 7 feet, M5 at 12 feet, M5 at 22 feet, M13 at 12 feet, M15 at 12 feet, M15 at 22 feet, and M20 at 7 feet).

March 19, 2017

- Pressure readings ranged from 0 to 0.03 IWC (maximum pressure in Probes M6 at 12 feet and M8 at 16 feet).
- Methane concentrations ranged from 0 to 210 ppmv (maximum concentration in Probe M17 at 7 feet).
- No measurable H₂S concentrations were observed.
- O₂ concentrations ranged from 3.9 to 20.4 percent (maximum concentration in Probe M19 at 12 feet).
- CO₂ concentrations were not measured.

A summary of the field measurements collected from the methane probes on October 15 and 16, 2016, and March 19, 2017, is presented below.

- The maximum pressure reading of 0.23 IWC was observed in Probe M5 at 22 feet on October 15, 2016.
- The maximum methane concentration of 24,500 ppmv was observed in Probe M20 at 12 feet on October 15, 2016.

- The maximum H₂S concentration of 34.5 ppmv was observed in Probe M20 at 12 feet on October 15, 2016.

6.5.6.2 Results of Laboratory Analysis of Vapor Samples

A summary of the results of laboratory analysis of soil gas samples collected from the methane probes is presented below.

October 16, 2016

- Methane concentrations ranged from not detect (ND<1.2 ppmv) to 11,000 ppmv (maximum concentration in Probes M15 at 12 feet and M15 at 22 feet).
- No detectable H₂S concentrations were present in the soil gas samples collected.
- O₂ concentrations ranged from 23,400 to 179,000 ppmv (maximum concentration in Probe M9 at 22 feet).
- CO₂ concentrations ranged from 37,600 ppmv to 329,000 ppmv (maximum concentration in Probe M15 at 22 feet).
- Concentrations of the following VOCs were reported: benzene, toluene, ethylbenzene, total xylenes, tetrachloroethylene (PCE), 2-butanone, carbon disulfide, chloroform, chloromethane, dichlorodifluoromethane, 4-ethyltoluene, 4-methyl-2-pentanone, 1,3,5-trimethylbenzene, and 1,2,4-trimethylbenzene. Refer to Table 3B for a summary of the VOC concentrations detected.
- One duplicate vapor sample was collected from Probe M20 at 12 feet. All analytes detected in the duplicate vapor sample appear to be consistent with the analyte detections present in the initial vapor sample.

March 19, 2017

- No detectable methane concentrations were present in the soil gas samples collected.
- Soil gas samples were not analyzed for H₂S, O₂, CO₂, or VOCs.

6.6 INVESTIGATION-DERIVED WASTE

Waste materials generated during investigation activities were temporarily stored on Site in labeled, DOT-approved, 55-gallon drums. The waste materials were stored in a fenced location selected by LAUSD personnel. Following completion of waste profiling, all waste materials will be transported to approved waste disposal facilities. Waste disposal documentation will be provided under separate cover.

7.0 HUMAN HEALTH AND ECOLOGICAL SCREENING EVALUATIONS

7.1 HUMAN HEALTH SCREENING EVALUATION

The PEA screening evaluation for human health effects involves identifying potential chemicals of concern, and then comparing detected concentrations to established screening levels developed by EPA and DTSC. The screening levels were developed to incorporate health risks and hazard estimates associated with human exposure, so concentrations detected above these screening levels are deemed to pose an unacceptable health risk for residential exposure. The human health screening evaluation is performed assuming an

unrestricted future residential land-use scenario, which is more health protective than the use of the Site as a school.

Constituents of concern identified during this PEA investigation include arsenic, lead, and petroleum hydrocarbons (specifically TPH-D and TPH-O). Arsenic was detected in 48 boring locations at concentrations exceeding the 12 mg/kg screening level (maximum concentration of 66 mg/kg), lead was detected in 66 boring locations at concentrations exceeding the 80 mg/kg screening level (maximum concentration of 6,300 mg/kg), and TPH-D and TPH-O concentrations were detected in one boring location exceeding the screening level of 1,000 mg/kg (maximum 1,900 mg/kg TPH-D and 4,700 mg/kg TPH-O). Based on these findings, a remedial response is required for areas where arsenic, lead, and/or petroleum hydrocarbons exceed their respective screening levels.

7.2 ECOLOGICAL SCREENING EVALUATION

The Site and its immediate surroundings have been developed by either residential or commercial activity for decades. Natural wildlife habitat does not exist within 1 mile of the Site, and most of the natural organisms on the Site and in the vicinity have been replaced with those typical of urban areas where small patches or edges of disturbed soil persist, typically occupied by hardy, exotic plant species. No sensitive native plant species were observed or expected to occur within the Site. For these reasons, a formal ecological risk assessment was not conducted for the Site.

8.0 DELINEATION OF AREAS OF IMPACTED SOIL

Based on investigation findings, the volumes of soil exceeding acceptable screening levels that will need to be removed prior to or concurrent with renovation activities were calculated for each area (see Figures 3A, 4A, 5A, 6A, 8A, and 9A). A summary of each area is presented below with the proposed excavation volume, type of soil impact (i.e., lead, arsenic, and/or petroleum hydrocarbons), and the portion of lead-impacted soil that qualifies as California Hazardous (Cal-Haz) lead-affected soil.

- Area 2 – 541.20 cubic yards (811.81 tons) of lead-affected soil, including 123.89 cubic yards (185.83 tons) of Cal-Haz lead-affected soil.
- Area 3 – 708.33 cubic yards (1,062.50 tons) of lead- and arsenic-affected soil, including 168.98 cubic yards (253.47 tons) of Cal-Haz lead-affected soil.
- Area 5 – 1,640.19 cubic yards (2,460.28 tons) of lead-affected soil, including 1,444.44 cubic yards (2,166.67 tons) of Cal-Haz lead-affected soil.
- Area 6 – 2,945.00 cubic yards (4,417.50 tons) of lead- and arsenic-affected soil, including 1,176.57 cubic yards (1,764.86 tons) of Cal-Haz lead-affected soil.
- Area 9 – 1,137.19 cubic yards (1,705.78 tons) of lead- and arsenic-affected soil, including 138.89 cubic yards (208.33 tons) of Cal-Haz lead-affected soil.
- Hydraulic Hoists and Clarifier – 46.67 cubic yards (70 tons) of hydrocarbon-affected soil.

The total volume of impacted soil exceeding acceptable screening levels is approximately 7,019 cubic yards (10,528 tons). Complete details regarding the proposed excavations (locations, areas, and depths) are included in Tables 4A and 4B.

9.0 QUALITY ASSURANCE/QUALITY CONTROL

The following quality assurance/quality control (QA/QC) procedures were used during this investigation to ensure data integrity:

- Field quality control measures included the use of clean, disposable nitrile gloves while collecting and handling individual soil samples, decontamination of all non-disposable sampling equipment before and after each use, and adherence to strict sample collection, labeling, and preservation procedures during sample collection.
- Duplicate soil samples were collected and analyzed at a minimum frequency of 10 percent of the primary samples to evaluate statistical precision. The duplicate soil samples were analyzed for the same parameters as the primary samples, and the analytical results are presented in the data tables with the primary samples results for comparison.
- Field equipment blanks were collected and analyzed at a frequency of one sample per day per sampling crew to evaluate possible cross contamination during sample collection. The field equipment blanks were analyzed for the same parameters as the primary samples, and the analytical results are presented at the end of each data table.
- Laboratory-supplied trip blanks were included in each cooler during transportation of samples for VOC analysis, and the samples were analyzed to evaluate possible cross contamination during sample shipment.
- All samples were transferred to the laboratory in accordance with chain of custody procedures, and were subject to the laboratory's standard QA/QC procedures, including the use of method blanks, surrogate recoveries, matrix spike samples, laboratory control samples, and duplicate samples.
- All samples collected during the investigation were preserved and analyzed within the specified holding times for the individual analyses.
- Appropriate laboratory detection limits were employed for each chemical constituent to allow comparison to applicable screening levels.

Upon completion of the investigation, all data were reviewed to confirm that they met the data quality objectives for precision, accuracy, representativeness, completeness, and comparability. Based on review of the data collected during this investigation, it is the opinion of TRC that all data collected meets the data quality objectives for this investigation.

10.0 FIELD VARIANCES

The field investigation outlined herein was conducted as initially scoped by LAUSD, with the following variances:

- The originally proposed work scope included 283 shallow soil borings across the Site to assess arsenic, lead, OCP, and PCB concentrations. Due to identified impacts, an additional 190 borings were added to fully assess the Site.
- Select soil boring locations and soil gas probe locations were moved slightly from their originally proposed locations to avoid subsurface utilities or to take advantage of nearby planters or grassy areas (rather than coring concrete sidewalks and walkways).
- Six borings (PE-5, B-7, C-7, D-7, E-7, and F-7) proposed in the tennis courts in Area 2 as part of the original work scope were removed from the sampling program; however, two of these borings (B-7 and C-7) were later added back into the program to assist with lateral assessment in that area.
- Five borings (H-1 through H-5) proposed in the basketball courts in Area 2 were not listed in the proposed investigation table work scope, but were shown on the proposed investigation figure. These five borings were completed.
- One boring (MB-6) was added to the work scope of five borings (MB-1 through MB-5) proposed around the Music Building in Area 5.
- The soil gas probes were proposed for installation to a depth of 22 feet bgs, with sample intakes at depths of 7, 12, and 22 feet bgs. However, due to drilling refusal during installation, 11 of the 20 locations were installed shallower than proposed (includes M6, M7, M8, M10, M11, M12, M13, M14, M16, M17, and M19). One of the modified probe locations was constructed with only one sample intake at 7 feet bgs, seven of the modified probe locations were constructed with two sample intakes at depths of 7 and 12 feet bgs, and the remaining three modified probe locations were still constructed with three sample intakes, but the deepest sample intake was installed to a depth shallower than 22 feet bgs.

11.0 CONCLUSIONS AND RECOMMENDATIONS

11.1 SUMMARY AND CONCLUSIONS

Roosevelt High School is currently an operational LAUSD school scheduled for a comprehensive modernization project involving removal and/or renovation of multiple site structures. The proposed renovation will include demolition of the music building, gymnasium, auditorium/classroom building, industrial arts building, four classroom buildings, and 19 portable classroom buildings. New buildings proposed for construction will include a general classroom building, a science and specialty classroom building, a gymnasium, an auditorium, a lunch shelter, and a health/wellness clinic. In preparation for the school improvements and renovations, LAUSD initiated investigation and analysis to identify potential environmental conditions that may warrant consideration or mitigation during the proposed modernization and renovation effort.

The incipient investigation activities included the preparation of a Phase 1 ESA that was prepared by Converse in August 2016. The Phase 1 ESA included research of available site background information, including regulatory agency database lists and agency file searches, and did not reveal documentation of any known release(s) of hazardous materials at the Site. Based upon the information derived from the

Phase 1 ESA, the Site is not identified as a known hazardous waste disposal site, hazardous substance release site, or landfill, and no hazardous materials pipelines are located beneath or adjacent to the Site. The Phase 1 ESA identified several onsite RECs.

Based on the findings of the Phase 1 ESA, the following activities were recommended to further evaluate the Site:

- Based on the age of the Site buildings, collect shallow soil samples around the drip lines of the existing and former buildings and analyze them for the potential presence of LBP residue, and from around the foundations of the existing and former buildings and analyze them for OCPs.
- Based on the potential presence of arsenic and PCBs in shallow soils, collect shallow soil samples across the Site and analyze them for arsenic and PCBs.
- Based on the presence and historical use of the hydraulic hoists and 3-stage clarifier associated with the former auto shop operations (Industrial Arts Building), collect soil samples in these locations to determine whether the subsurface has been impacted from these features.
- Considering that the site is located within the Boyle Heights Oil Field and within a designated methane zone in the City of Los Angeles, conduct a methane survey in accordance with LADBS Site Testing Standards.

The PEA investigation activities were subsequently conducted between October 3, 2016, and June 14, 2017, and included sampling of the following:

- 473 shallow soil borings across the Site;
- 8 soil borings near the hydraulic hoists at the Industrial Arts Building;
- 2 soil borings near the clarifier at the Industrial Arts Building;
- 2 soil borings to evaluate fill materials beneath the northern and southern portions of the Site; and
- 20 nested, multi-depth soil gas probes across the Site.

Results of the PEA investigation indicated the following:

- Arsenic was detected in soil at concentrations exceeding the screening level of 12 mg/kg in 48 boring locations across the Site (maximum 66 mg/kg).
- Lead was detected in soil at concentrations exceeding the screening level of 80 mg/kg in 66 boring locations across the Site (maximum 6,300 mg/kg).
- OCPs were detected in multiple composite samples across the Site; however, all OCP concentrations were below their respective health-based screening levels.
- No PCBs, VOCs, SVOCs, or TPH-G were detected in soil above laboratory reporting limits during this investigation.
- TPH-D and TPH-O were detected in soil at concentrations exceeding the screening level of 1,000 mg/kg in one sample collected at one of the four hydraulic hoists (maximum 1,900 mg/kg TPH-D and 4,700 mg/kg TPH-O).
- Additional metals concentrations detected beneath the Site are consistent with background concentrations for California soils.
- The maximum concentrations of methane and hydrogen sulfide in soil gas measured in the field included 24,500 ppmv and 34.5 ppmv, respectively. The maximum concentrations of methane and hydrogen sulfide in soil gas detected in the laboratory samples included 11,000 ppmv methane and

no detectable hydrogen sulfide. Detectable VOCs were also reported at low concentrations in the soil gas samples collected for analysis.

The volume of soil impacted with arsenic, lead, and/or petroleum hydrocarbons above screening levels was calculated to be approximately 7,019 cubic yards (10,528 tons).

Based on the methane concentrations detected beneath the Site, mitigation will be required as part of future redevelopment of the Site. The methane mitigation system or techniques to be implemented will be sufficient to mitigate the low concentrations of VOC concentrations detected.

11.2 RECOMMENDATIONS

TRC recommends that a Removal Action Workplan (RAW) be prepared to address the excavation, transport, and off-site disposal of soil impacted with arsenic, lead, and petroleum hydrocarbons above screening levels. The RAW should be prepared to comply with DTSC requirements. Soil removal activities outlined in the RAW can be implemented either prior to, or concurrent with, the proposed construction work scope.

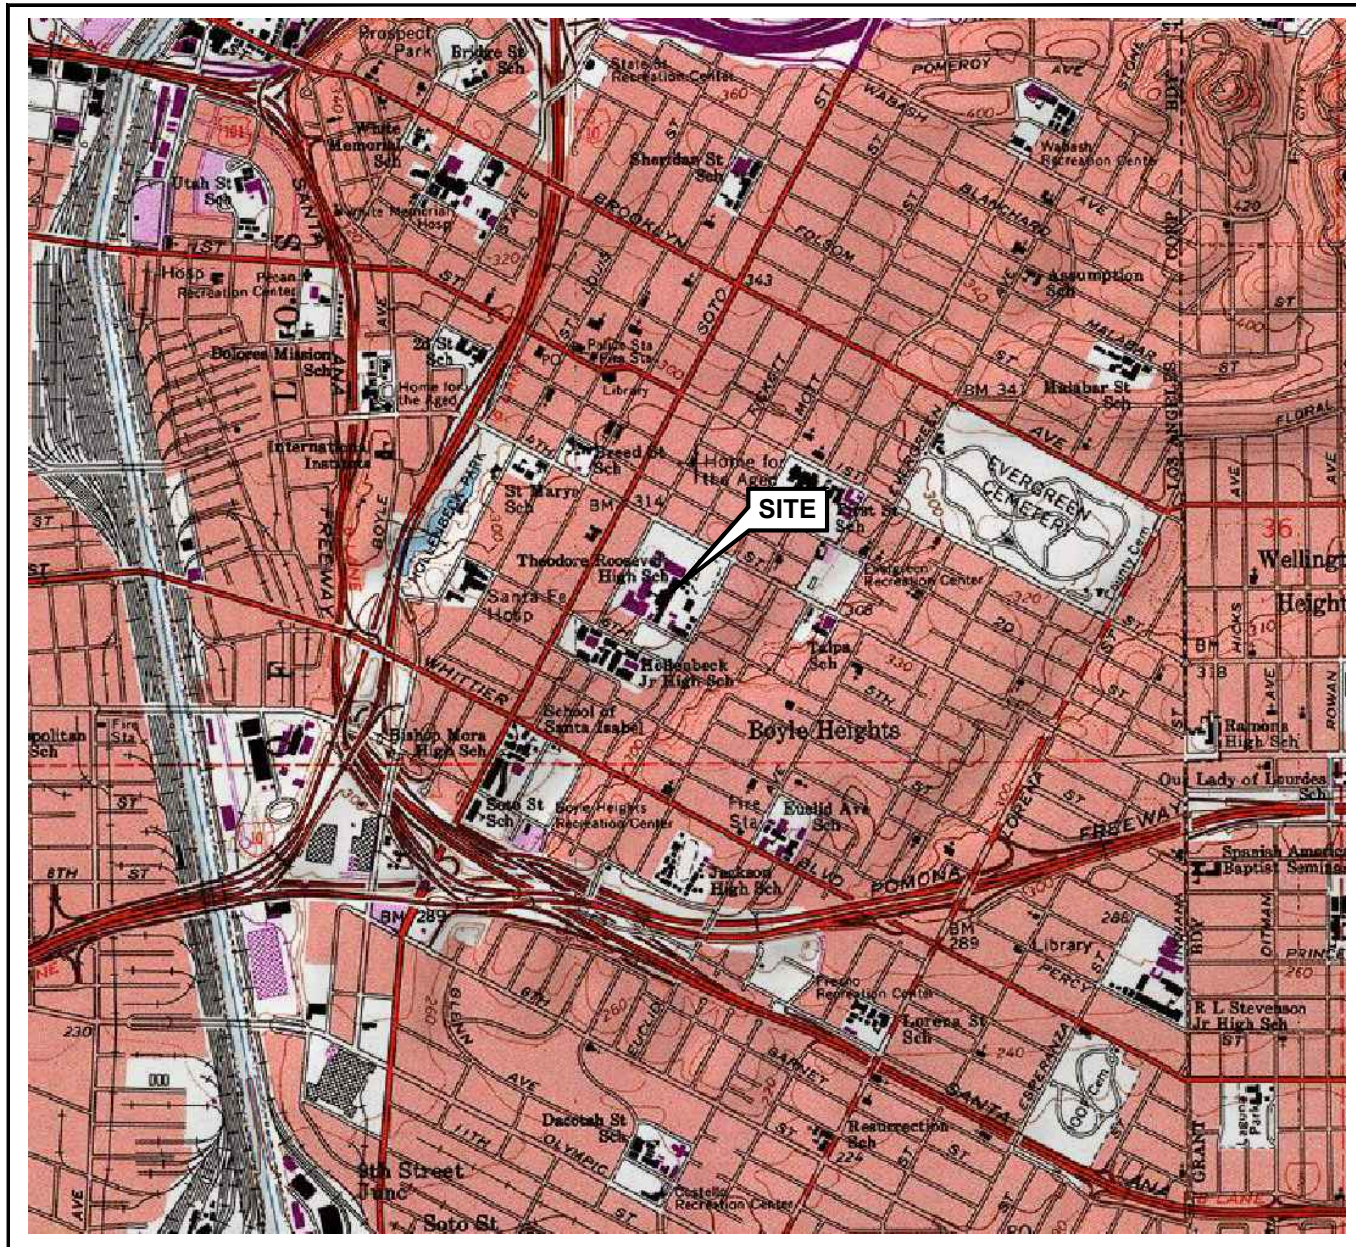

Recommendations for the methane mitigation approach are currently being prepared and will be provided in a separate methane investigation report.

Notes: Table summarizes arsenic and lead laboratory analytical reports for soil samples. Samples with detectable concentrations presented in bold font. Arsenic screening level based on California background level. TTLIC screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3, Table 1 (DTSC, 2015). OCPs screening levels are based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level [carcinogenic or non-carcinogenic, lowest value] (EPA, 2015). LAUSD = Los Angeles Unified School District ID = Identification bgs = below ground surface EPA = Environmental Protection Agency --- = not analyzed mg/kg = milligrams per kilogram mg/L = milligrams per liter µg/L = micrograms per liter DUP = Duplicate of preceeding sample J = Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration. (1) = 3.8J Aroclor 1260 (2) = 11J Aroclor 1260

locations based on GPI Geotechnical Investigation Report dated June 14, 2015

one discrete sample to be collected from indicated location in accordance with EPA method 5035 for VOC and TPHg analysis

GPI = Geotechnical Professionals Inc.

TPHg = Total Petroleum Hydrocarbons in the gasoline range

TPHd,o = Total Petroleum Hydrocarbons in the diesel and oil ranges

VOCs = Volatile Organic Compounds

SVOCs = Semi-Volatile Organic Compounds

PCBs = Polychlorinated biphenyls

OCP = organochlorine pesticides

ft bgs = Feet Below Ground Surface

x = discrete sample to be composited for analysis

CH₄ - Methane

H₂S Hydrogen sulfide

¹. Monitor for pressure, fixed gasses (O₂, CO₂), methane and hydrogen sulfide.

Depths based upon a presumed footing depth of 2-feet.

(B12) indicates a co-located soil boring.

NOTES

1. Subsurface conditions will be allowed to equilibrate for a minimum period of 2 hours before monitoring is conducted.
2. A Landtec GEM 5000 landfill gas analyzer will be used to monitor for pressure, fixed gasses (O_2 , CO_2), methane and hydrogen sulfide.
3. If gas concentrations are less than the detection limits of the GEM 5000, instruments capable of measuring methane or hydrogen sulfide to levels of 0.005% (50 ppm) and 0.01 ppmv respectively such as a TIA 1000 or Jerome 631xs will be used.
4. Measurement of gas concentrations will be taken 2 times with a minimum 24-hour interval between measurements.
5. Ten (10) percent of readings will be confirmed by laboratory analysis. Methods To-3: EPA 15/16
6. Laboratory analysis will be conducted on samples with an O_2 reading less than 10%.

5/19 Ran Schlumberger Electric Log Recording from 3025' and Dipmeter Survey.

5/19 thru 5/27 Reduced hole to 8 $\frac{1}{2}$ " and drilled and cored directional hole 3027'-3763'.
Opened 8 $\frac{1}{2}$ " hole to 10 5/8" 3027-3560'

3027-3763' 736' Core #1 thru #74 (See core record attached)

5/28 Ran Schlumberger Electric Log Recording from 3760' and Dipmeter Survey.

5/28 thru 6/5 Drilled and cored 8 $\frac{1}{2}$ " hole 3763-4350'
Opened 8 $\frac{1}{2}$ " hole to 10 5/8" 3560-4016'

3763-4350' 587' Cores #75 thru #134 (See core record attached)

6/5 Ran Schlumberger Electric Log Recording from 4350' and Dipmeter Survey.

6/8 thru 6/13 Drilled and cored 8 $\frac{1}{2}$ " hole 4350-4789.
Opened 8 $\frac{1}{2}$ " hole to 10 5/8" 4016'-4523'

4350-4789' 439' Core #135 thru #179 (See Core Record Attached)

6/13 Ran Schlumberger Electric Log Recording from 4788'.

6/15 and 6/16 Ran Schlumberger Dipmeter Survey.

6/17 Opened 8 $\frac{1}{2}$ " hole to 10 5/8" 4523-4789'.

6/18 Ran and cemented 7" 26# J-55 Smls. Casing at 4788' w/550 Sax Modified Cement using 2% Aquagel Mix.

6/19 thru 6/21 Landed casing. Removed 4 $\frac{1}{2}$ " B.O.P. equipment and installed 3 $\frac{1}{2}$ " B.O.P. equipment. Tested shaffer gate w/750# for 15 min., and tested Hydril B.O.P. w/900# for 15 min. Found top of cement at 4740' and drilled out 6" hole 4740-4790'.

6/21 WSO on 7" Casing

Ran JFT W/Olympic Casing Packer on 3 $\frac{1}{2}$ " 15.5# D.P., set packer at 4752' w/2 7/8" perf. tail to 4770'. 3/4" bean, 31' water cushion, balance dry drill pipe opened valve at 10:35 P.M. closed valve at 11:05 P.M. Valve Open 30 mins. Had puff blow-then dead for balance of test. Recovered 35' cement cut mud, no free water. W.S.O.--O.K.

RECEIVED

2 Production Test 4530-4695'

Ran J.F.T. w/Olympic Casing Packer on 49 1/3 stands 3 1/2" 15.5# D.P. 30' water cushion, 3/8" bean. Set packer at 4503' w/ 2 7/8" perf. tail and 2 pressure bombs, extending to 4530'. Opened valve at 1:40 P.M., closed valve at 2:40 P.M. Valve Open 1 hr. Had strong steady blow w/gas to surface in 20 mins. Decreasing from med. steady to light steady blow at end of test. Pulled loose o.k. Recovered 780' net rise heavy gassy drilling fluid grading to est. 120' muddy salt water. Mx. 575 G.P.G.

7/12

Ran McCullough Bridge Plug and set at 4465'. Ran McCullough Gun Perforator and shot 4-1/2" holes at 4410'.

7/13

W.S.O. Test on 4-1/2" holes at 4410'.

Ran J.F.T. w/Olympic casing packer on 3 1/2" - 15.5# D.P. 30' water cushion, 3/8" bean. Packer set at 4388' and perf. tail to 4410'. Opened valve at 11:46 P.M. Closed at 1:05 A.M. Open 1 hr. 19 mins. Had 1 min. weak steady blow w/occasional puffs during remainder of test. Recovered 100' net rise drilling mud. Ran McCullough Perforator and shot 2-1/2" Holes/ft 4415-4440'.

PRODUCTION TEST 4415-4440'

Ran J.F.T. w/Olympic Casing Packer on 48 stands. 3 1/2" 15.5# D.P. 30' water cushion, 3/8" bean. Set packer at 4390' w/ 2 7/8" perf. tail and 2 pressure bombs to 4412'. Opened valve at 9:32 A.M. closed 10:32 A.M. Open 1 hr. Had med. steady blow decreasing to light steady blow throughout. Recovered 180' drilling mud, grading to med. heavy mud with scum of oil at bottom. Ran McCullough Bridge plug and set at 3750'. Ran McCullough Gun Perforator and shot 4-1/2" holes at 3605'.

W.S.O. Test 4-1/2" holes at 3605'.

Ran J.F.T. w/Olympic Casing Packer on 3 1/2" 15.5# D.P. w/30' water cushion and 3/8" bean. Set packer at 3575' with 2 7/8" perf. tail and 2 pressure bombs to 3603'. Opened valve at 8:11 P.M., closed 9:13 P.M. Open 1 hr. 2 min.s Had weak heading blow to occasional puffs for 55 mins., last 7 mins. Fair steady blow of air. Recovered 270' thin mud w/considerable gas at bottom and slight scum of oil.

7/14

Ran McCullough Gun Perforator and shot 2-1/2" holes/ft. from 3725' to 3615' total of 220 holes.

Production Test 3615-3725'.

Ran J.F.T. w/Olympic casing packer on 39 stands 3 1/2" 15.5# D.P. 30' water cushion, 3/8" bean. Set packer at 3581' w/ 2 7/8" perf. tail and 2 pressure bombs to 3603'. Opened valve at 12:00 noon, closed valve at 1:00 P.M., open 1 hr. Had medium steady blow of air 9 mins. w/gas to surface, decreasing to medium blow by heads for balance of test.

#146	3949	3959	10'	SLTST As above, W/ 20% interbdd spotty oil stnd gy SS, in strks 2"-3" thick. Dk amber cut to no cut. Kerosene odor. One 30°-fract.
#147	3959	3969	10'	SLTST & SS (50/50) interbdd. SS is lt gy to brn, poorly bdd, soft, easily friable W/ <u>spotty oil</u> stns thruout. No cut to amber cut. Slst is dk brn, masv, firm as above, xbbd. No good dips. Num slicks at all angles. Instant flash.
#148	3969	3979	10'	GY SS & SHALE (80/20). SS is gy, med-fn grnd, well to fairly well sorted, friable to easily friable, W/ thin strks (1"-4") of organic shale thruout, and two 4" beds of SS Shell in bottom 3'. Puff flash; no cut.
#149	3979	3989	10'	SS & SHALE (60/40) interbdd. Shale in beds ranging from 1/8" to 2" in thickness. SS is lt gy to faintly stnd, med grnd, poorly sorted, friable. No cut to straw color. Shale is dk brn, organic. Poor but fairly consistent dip of 11-15°. Puff flash.
#150	3989	3999	9'	GYSS Lt gy to faintly stnd, fn grnd, poorly sorted, friable, interbdd thruout W/ thin (1/4"-2") strks of sltst & brn shale (aggreg 20%). No cut to amber cut. Fairly consistent 3°-5° dip on shale banding. Puff flash.
#151	3999	4009	10'	SS & SHALE (50/50) interbdd as directly above. No cut to straw color. 5-7° dip on shale banding.
#152	4009	4020	9'	SLTST & SS (60/40) closely interbdd in 3"-8" strks. Slst is mainly gy, but a 3" strk at 1" from top is med brn and gives a dk amber cut, & 6" strk at 6' from top is fairly evenly oil stnd although has grayish cast. Gives <u>amber cut</u> . 3" strk at bottom is med brn oil stnd and gives amber cut. Oil shows <u>look weak</u> . No gas flash at top of barrel, and only a sudden puff at bottom of barrel. 3" sltst strk at 1' from top of core offers a good 28° dip on dk bands; W/ slicks on bddg plane.

DESCRIPTION

	FROM	TO	RECOVERY		SEP 11 1948	DESCRIPTION
#154	4541	4551 (Cont.)	3'6"	SLTST	one vertical fract at 1' from bottom. Oil stnd sand shows no glow under light.	
#155	4551	4561	10'	SLTST	Dk brn to dk gy, firm, well bedded W/ num dk brn organic shale laminae, and W/ aggreg of 2' oil sd interbdd in 1/2"-6" strks. SS is lt gy to brn, v. fn grnd, easily friable, lightly but fairly evenly stnd, W/ no gy SS. Oil stnd SS gives pale cut and looks v. weak under light; not v. perm. Good 22° dip. Entire core fractd & slickd.	
#156	4561	4571	7'	SLTST	Dk brn to gy, masv, firm, W/ oil stnd SS in 8" strk at 2' from top and 6" strk at 3'6" from top. SS is lt brn, masv, easily friable, fn grnd, fairly evenly stnd, W/ medium yellow cut. Gives fair glow under light. Not very permeable. Entire core fractd & slickd. Gas pushed core 2' from barrel when core head was removed.	
#157	4571	4581	7'6"	SLTST	Dk brn, masv, firm, W/ aggreg of 1' interbdd 1"-6" strks of oil stnd SS; lt brn, fn grnd, easily friable to firm but friable, v. light ly to unevenly stnd. Gives pale yellow to yellow cut; v. pale glow under light. Entire core shattered and slickd (may be v. near fault.) No dips. No flash.	
#158	4581	4591	10'	SLTST & OS	Interbdd (50/50), W/ one 6" strk SS Shell at four feet from top. Slstst is dk gy, firm; all highly fractd & slickd. SS is lt brn, appears evenly stnd, soft, fn grnd, W/ lt amber cut. Shows weak glow to no glow under light.	
#159	4591	4600	10'	1' SS	Lt brn stnd, soft, friable, fn grnd, W/ distillate odor & straw cut.	
			2' SS	Dk gy, masv, friable, fn to med grnd, mic, silty, W/ no cut or odor.		
			1' SS SHELL	Med gy, hd, fn grnd, W/ dk brn oil stn in center. One steep fract, W/ free oil showing.		
			1' OIL SD	Lt brn, evenly stnd, friable, fn grnd, perm W/ lt amber cut.		
			5' SLTST	Dk gy, masv, firm, W/ aggreg of 8" interbdd oil sd. All of core is shattered & slickd. One 1" vertical fract in middle of sltst. Poor 26°		

FROM TO RECOVERY

SEP 11 1948 DESCRIPTION

#159 4591 4600 (Cont.)

Abund gas bubbles on mud sheath; oil sd shows weak glow under light.

#160 4600 4610 10' 1' SS SHELL W/ free oil showing in fract. 2' SLTST Dk gy, firm, highly fractd & slickd. Free oil spots in fract. 2' OIL SD Med brn, evenly stnd, firm, friable, fn grnd, appears perm. W/ good odor & amber cut. 1' SS SHELL As above. 4' OIL SD As above, W/ several 2" strks of interbdd sltst aggreg 8". Dip 42°. (Core analysis sample at 4604' & 4609').

#161 4610 4620 9' 4' OIL SD W/ two 2" strks of sltst interbdd. Oil sand is med brn, evenly stnd, friable, med-crse grnd, perm. W/ amber cut. 5' SLTST Dk gy, firm, generally masv, W/ some thin laminae of gy SS. Good dip of 50°. All of core fractd & slickd; free oil spots in fract. (Core analysis sample at 4613').

#162 4620 4628 2' 1' OIL SD Dk brn, evenly stnd, well saturated, firm, friable, med-fn grnd, well sorted; appears perm; looks rich. Gives good amber cut; has strong oil odor. (Core analysis sample at top of core). 1' SLTST As above.

#163 4628 4638 10' SLTST W/ three 2" strks of oil sd interbdd. Sltst is dk gy, firm, masv to irreg bdd. Top 2' is highly fractd & slickd; looks like fault zone. Has some oil spots thruout. Oil sand is lt brn stnd, soft, fn grnd, W/ lt amber cut.

#164 4638 4648 10' SLTST Interbdd W/ occas thin strks & partings of oil sd (90/10). Sltst is dk gy, firm, masv to irreg bdd. Dip of 42° on SS parting; 40-45° on sltst-OS contact. Oil sd is lt brn stnd, friable, fn grnd, appears perm. Amber cut.

#165 4648 4658 10' SLTST Interbdd W/ sev 1" to 2" strks of oil sd (aggreg 1') and W/ 6" SS Shell at 5' from top of core. Sltst is dk gy, firm, masv to irreg bdd W/ occas thin laminae of oil sd. Good dip of 47°. Some fractg & slickg.

(Cont)

SEP 11 1948

	FROM	TO	RECOVERY	DESCRIPTION
#165	4648	4658 (Cont.)		Oil sd is med brn, evenly stnd, soft, fn grnd, perm, W/ dk amber cut. SS Shell is fractd, W/ abund free oil on surface & on fract planes.
#166	4658	4668	8'	SLTST Dk gy, firm, irreg bdd to well bdd W/ thin strks & laminae of gy SS & brn shale. Good dip of 46°; some fractg & slickg thruout core.
#167	4668	4678	11'	SLTST Dk brn, masv, firm, W/ occas 1/4"-1/2" interbeds lightly oil stnd SS (aggreg 6"). Fractg in top 5'. Fair 49° dip. 1-sec gas flash.
#168	4678	4689	10' 7'	SLTST As above, W/ occas 1"-3" strks of oil stnd SS; med brn, masv, fn grnd, easily friable to firm but friable, fairly evenly stnd, Fair glow under light.
			1'6"	OIL SS Med-grn, masv, fn grnd, firm but friable, fairly evenly stnd, W/ amber cut. Gives good glow under light.
			0'6"	SLTST As above.
			1'	OIL SS Med brn, masv, fn grnd, firm but friable, rather weakly stnd. Gives lt amber cut; weak glow under light. Poor 50° dip; occas fractg & slicks.
#169	4689	4699	9'6"	OIL SS Med brn, masv, fn to med grnd, soft, easily friable, W/ 10" SS shell at 3'6" from top. Oil SS is fairly evenly stnd, W/ amber cut & weak odor. Gives weak glow under light. Occas 1" sltst strks as above.
#170	4699	4702	4'6" 1'6"	OIL SD Masv, med to fn grnd, well sorted, loose to friable W/ diff, dk brn at top; gy strks at bottom.
			0'2"	SS SHELL
			1'	OIL SD Lt brn stnd to gy strkd as above. Gives dk brn cut, W/ distillate odor. Seems perm.
#171	4702	4712	2'	SS SHELL
#172	4712	4718	7' 2'	OIL SD Masv, fn grnd, well sorted, <u>gy strkd</u> , easily friable.
			3'	SLTST Dk gy, masv, finely micaceous, slickd; W/ lt amber cut.
			1'	GY SS Med grnd, well sorted, easily friable.
			1'	OIL SD Med brn, masv, fn-med grnd, well sorted, easily friable, seems perm. W/ dk brn cut, distillate odor. Fair dip of 66°.

RECORDED

SEP 11 1948

	FROM	TO	RECOVERY		DESCRIPTION
					LA ANGELES CALIFORNIA
#173	4718	4728	6'	5'	OIL SD Masv, med grnd, well sorted, easily friable grading from 4" of gy at top, to dk brn, evenly stnd, <u>well saturated in bottom 2'</u> ; W/ 5" sltst <u>just above the well saturated sand</u> . No cut to lt amber to dk brn.
				1'	SLTST Gy, masv, sdy, finely micaceous, slickd.
#174	4728	4738	9'		SLTST & SS (90/10), interbdd. Sltst as above; fractd & slickd. Sand is <u>oil stnd to well saturated at top, becoming less stnd and gy at bottom</u> . Fn to med grnd, well sorted, easily friable. W/ slight distillate odor, lt amber cuts. Good dip on dk brn bands, 68°.
#175	4738	4748	10'		SLTST Dk gy-brn, masv as above but occas has dk brn bands of organic shale; platy, well bdd, W/ dips ranging from 53° to 62°, and W/ a minor amount of gy fn grnd SS strks. No cuts or odor. Sand aggreys 5% of core.
#176	4748	4759	10'	5'	SLTST As directly above, W/ occas high-angle slickd fract.
			1'		OIL SD Med brn, med-fn grnd, quite firm but friable W/ diff. <u>Evenly stnd, looks rich, W/ strong oil odor. Gives amber cut.</u> (Core analysis sample).
			1'		SLTST As just above. Contact W/ oil sd gives fair dip of 58°.
			1'		OIL SD As above but not quite as firm. <u>Looks good; gives amber cut and has strong odor.</u>
			2'		SLTST As above, W/ 2" oil sd strks at 1/2' from bottom and at bottom. Both strks same as oil sd above; <u>looks rich, W/ amber cuts & strong odor.</u>
#177	4759	4769	9'	4'	OIL SD Med brn, med-fn grnd, well sorted, appears perm. <u>Evenly stnd, firm but friable W/diff, has strong oil odor & gives amber cuts. Looks rich.</u> Num gas pocs on mud sheath. (Core analysis sample).
			1'6"		SLTST As above, W/ minute lenses & spots of dk brn oil sd thruout.
			4'6"		OIL SD. Same as above; <u>looks rich, W/ amber cuts & strong odor.</u> (Core analysis sample). Core gave a long, slow-burning gas flash when top & bottom of barrel opened. Est. time 12 seconds; burned deep within the barrel.

SEP 11 1948

	FROM	TO	RECOVERY	DESCRIPTION
#178	4769	4779	10' 1'6"	<p>OIL STD SS Med brn, med grnd, hd (unable to break w/ fingers), <u>evenly stnd</u>, has strong oil odor.</p> <p>1'6" OIL SD Med brn, <u>med-fn grnd</u>, soft & easily friable clean, well sorted; appears perm; <u>looks rich</u>, has strong oil odor & gives <u>amber cut</u>. W/ 3" strk sltst at base of this sand.</p> <p>3' OIL SD & GY SD In 3" to 4" strks, gradational, W/ no apparent difference in texture of sd; fn grnd, soft & friable. Amber cuts where oil stnd.</p> <p>4' SLTST As above, W/ occas high-angle fract & slicks W/ minor amount of oil sd as minute lenses or pockets thruout; <u>dk brn</u>, fn grnd, friable, W/ good odor.</p> <p>This core showed considerable gas while unscrewing top connection of core barrel; burned during the time of this operation & for approx 10 seconds after disconnection. The bottom of barrel also showed gas. Core analysis sample taken of hd oil stnd sandstone at top, and of gy sd in middle of core.</p>
#179	4779	4789	8' 5'	<p>SLTST & SS In alternating beds varying from 1" to 1'. Sltst is dk gy, masv, firm, badly fractd in some parts, W/ num high-angle breaks. SS is gy to lt brn, <u>oil stnd</u>, masv, friable, fn grnd, gives lt to dk amber cuts.</p> <p>3' SLTST Lt brn to blk, masv, fractd & slickd as above, W/ few thin (1/4"-1") strks of <u>oil stnd SS</u>. Gives amber cut. W/ 2" hd SS Shell at base of core.</p>
#180	4790	4794	4'	SLTST Dk gy, firm, masv; core is badly mashed & twisted in coring. Has heavy mud cake, making it diff. to tell if all of core is formation. Abund gas bubbles on mud sheath; instant flash.
#181	4794	4804	9'6"	SLTST Mouse-gy to dk gy-brn, occas banded W/ dk brn organic shale strks but usually masv & dense, badly fractd. Dips are high, ranging from 65-70°, & W/ occas small lenses of med brn oil sd thruout (approx 10% of core). Sand is fn grnd to silty, firm but friable; has strong oil odor & gives amber cuts.

	FROM	TO	RECOVERY	DESCRIPTION
#188	4862	4872	10'	SLTST Dk gy, firm, masv.
			6'-0'6"	OIL SD Lt brn, stnd, soft, fn grnd, mud-shot; W/lt amber cut.
			2'6"	SLTST As above, W/ sev minor strks oil sd as above.
			1'	OIL SD Med brn, evenly stnd, soft, fn grnd, perm, somewhat mud-shot. W/ good odor & amber cut. Gives good glow under light.
#189	4872	4882	10'	OIL SD Med brn, evenly stnd, well saturated, rich looking, soft, fn grnd, perm, W/ good odor & amber cut.
			9'	OIL SD W/ two 5" strks of sltst interbdd. Oil sd is med brn, evenly stnd but very mud-shot; soft, fn grnd, perm. W/ good odor and amber cut to lt amber. Puff flash. Gives good glow under light. (Core analysis sample at 4876').
#190	4882	4892	9'	OIL SD Med brn, evenly stnd, soft, fn grnd, perm; W/ good odor & amber cut.
			6'	SLTST Dk gy, firm, W/ v. thin strks oil sd & some strks of gy SS. Weak odor & straw cut, instant flash. Sltst is mud-shot thruout.
#191	4892	4903	9'	SLTST Brn-gy, masv, firm, W/ thin laminae of fn gy SS.
			2'6"	GY SS Masv, friable, fn grnd, silty, W/ few very thin strks of sltst.
			0'6"	SLTST Brn, masv, firm.
			2'6"	GY SS Oil stnd, masv, friable, W/ num thin (1/8-1") strks of above sltst. Bottom 6" heavily oil stnd, W/ dk amber cut. Sand appears somewhat silty.
			1'	SLTST As above, W/ thin strks of gy SS.
			0'6"	SLTST Brn, masv, firm.
			1'6"	SS Lt brn, W/ few gy spots, friable, masv; W/ dk amber cut, good odor. Instant flash. No dips. Core somewhat fractd near top.
#192	4903	4913	10'	GY SS Occas oil stnd; masv, friable, fn grnd, W/ num thin brn strks. Appears badly shattered; somewhat silty. Gives amber cut.
			3'	SLTST Brn, masv, firm, W/ alternating strks of above gy SS. Sltst occurs in sections from 1"-6" thick. Dip 43°.
			3'	SLTST Lt brn-gy, masv, firm, W/ few v. thin bands of brn sltst and some 1/4" strks of gy SS. Good dip of 42°.

LOS ANGELES, CALIF. TA DESCRIPTION

	FROM	TO	RECOVERY		
#193	4913	4923	8' 6"	SLTST	As above, W/ occas 1-3" strks of lt gy SS; SS is fn grnd, soft & friable (approx 10% of core). W/ occas thin dk brn organic shale laminae, giving excellent dips of 44-45°. No stain or odor.
#194	4923	4933	8'	SLTST	W/ occas thin strks of lt gy SS as directly above (aggreg 10% of core). No oil showings.
#195	4933	4943	10' 5'	SLTST	W/ 3" strk of gy SS at 2' from top, and 8" SS strk at 4' from top. The latter strk is slightly oil stnd near center. Good dips of 47°.
			1'	SS	Lt gy to lt brn oil stnd, med-fn grnd, soft, friable, clean, well sorted, appears perm. W/ two inches med brn oil stnd at top and 1" oil stnd near bottom.
			4'	SLTST	As above, W/ occas 1"-2" strks of gy SS as above, but spottily oil stnd.
#196	4943	4953	11' 10'	SLTST	Gy-gn, masv, firm, W/ occas strk of oil stnd SS (1/2" thick), and W/ occas strks of gy SS. Badly balled in drlg.
			1'	SHELL	Limestone, dk gy-gn, masv.
#197	4953	4963	10' 2'	SLTST	Gy-gn to brn, masv, firm.
			1'	SS	Med gy, masv, easily friable, poorly sorted, fn grnd, silty; W/ low perm.
			2'	SLTST	As above.
			1'	SS	As above.
			1'	SLTST	As above, W/ occas thin strks of interbdd Gy SS.
			1'	SS	As above; no oil stng.
			2'	SLTST	As above. Fair 49° dip.
#198	4963	4973	10'	SLTST	Gy-bn to brn, masv to well bdd, firm, W/ occas strks of silty gy SS 1/2" thick, and W/ occas dk brn organic shale laminae. Good 40° dip.
#199	4973	4983	10' 1'	OIL SS	Dk brn, med grnd, masv, evenly stnd, easily friable, W/ strong odor & dk amber cut. Gives medium glow under light.
			7'	SLTST	As above, W/ good 40° dip.
			2'	OIL SS	Lt brn, fn grnd, easily friable, W/ num 1"-3" strks of sltst (aggreg 50%). Amber cut, fair odor; gives good glow under light. Mud-shot.
#200	4983	4993	10' 6'	SLTST	Dk brn to gy gn, masv, firm, W/ 3" well saturated oil SS at 6" from top, and W/ 4" interbdd gy SS & oil SS at 6" from bottom.

SEP 11 1948

	FROM	TO	RECOVERY	DESCRIPTION
#200	4983	4993 (Cont)	1'	GY SS Masv, easily friable, poorly sorted, silty, fn grnd.
			2'	SLTST As above.
			2'	GY SS Masv, easily friable, med to fn grnd, poorly sorted, W/ low perm. W/ 2" oil stnd strk at 3" from top. Good odor & dk amber cut in this portion. Fair 51° dip.
#201	4993	5003	8'	2' GY SS Masv, friable, med grnd, W/ few dk strks & trace of oil stng. Lt amber cut.
			0'4"	SLTST As above.
			4'2"	SLTST Brn-gy, masv, firm, W/ sev 1/4"-1/2" strks of gy, masv, SS.
			1'6"	SS SHELL Gy, masv, v. hd. faint odor; no dips.
#202	5003	5013	9'	2' SLTST Lt brn, interbdd W/ gy, masv, friable, fn grnd SS (1/8"-2" thick).
			1'	SS SHELL Gy, masv, hd.
			6'	SLTST & GY SS Interbdd as above (1/4"-4" beds). Core badly balled & burned; W/ sulphur odor at btm. No apparent dip.
#203	5013	5024	12'	GY SS & SLTST (50/50) in alternating beds (1/8"-6" thick). Slstst is lt brn, W/ dk brn strks, masv, firm SS is gy, masv, friable. Good 30-32° dips.
#204	5024	5034	9'6"	SLTST Lt brn to brn, masv, firm, interbdd W/ num thin (1/8"-1") strks of fn-med grnd gy SS. Fair 45-50° dips. Instant flash; no cut or odor.
#205	5034	5044	6'6"	0'6" SLTST Brn-gy, firm, poker chip, W/ thin gy SS strk
			5'6"	SLTST Lt brn, well bdd, W/ 1/8" dk brn bands; fm, W/ sev 1" bands of fn gy SS and W/ 2" hd SS Shell at top. Good 39-40° dips.
			0'6"	SS SHELL As above. Instant flash; no cut or odor.
#206	5044	5055	11'	SLTST Lt brn, masv, firm, W/ few scattered 1/4"-1" strks of gy SS. Slightly oil stnd at center of core. Amber cut, good odor. Fair 45° dip.
#207	5055	5066	10'	SLTST As above, interbdd W/ 1/8"-1" strks of gy SS as above. No show. Dips 39-45°.

SEP 11 1948

	FROM	TO	RECOVERY	DESCRIPTION
#208	5066	5076	10'	SLTST & SS (70/30). Sltst is lt brn to brn, masv, firm interbdd w/ 1/8"-1/2" strks of fn grnd, friable gy SS. Sltst varies from 1/8" to 3" beds, w/ num thin dk brn bands. Dips vary from 30-45°. Instant flash; no show. W/ 3" SS Shell at about 6" from bottom of core.
#209	5076	5086	4'6"	SLTST Dk gy, firm, masv, w/ occas thin strks of Gy SS. Poor dip of 30°. No flash.
#210	5086	5096	5'	GY SS Dk gy, masv, firm, fn grnd, silty, w/ occas 1/8" strks of brn shale; slickd. Poor 50° dip. No flash; burned sulphur odor.
#211	5096	5106	10' 2' 8'	SS SHELL SS Med gy, masv, firm, fn grnd, appears perm, interbdd w/ 1/8"-1/4" strks of sltst (aggreg 30%). Burned sulphur odor; no flash. Sltst is dk gy, masv, firm.
#212	5106	5116	9'	SS & SLTST (50/50) interbdd in 1"-2" strks. SS is lt gy, masv to irreg bdd w/ v. thin strks of firm, dk gy sltst; generally masv, w/ occas thin strks of brn shale. Fair 35° dip. Sd is soft, fn grnd, silty, w/ burned sulphur odor. One 2" strk lt brn, weakly stnd sand at 5' from top of core. W/ weak odor & straw cut.
#213	5116	5127	10' 4' 1' 3' 2'	SLTST As above, w/ occas 1"-2" strks of lt gy, friable SS. Fair 35° dips on contacts. SS SHELL Lt gy, fn grnd, hd, well cmtd. SS Lt gy, fn grnd to silty, soft & friable, w/ occas strks of sltst interbdd. Sour, burnt odor. SLTST As above but v. sandy, w/ 2" strk SS near bottom, <u>slightly oil stnd.</u>
#214	5127	5135	7'	SLTST As above but bailed & chewed up in coring. No dips apparent.
#215	5135	5138	4'	SLTST As above. Badly balled up, making it difficult to determine dip. Appears to be about 30°, from a sltst-SS strk contact. W/ occas thin strks & lenses of lt gy SS thruout, & w/ 2" strk at 3' from top <u>slightly oil stnd.</u>

SEP 11 1948

LOS ANGELES, CALIF. DESCRIPTION

	FROM	TO	RECOVERY			
#216	5138	5148	10'	2'6"	SLTST	Dk gy-brn, masv, micaceous, v. sandy. Core not balled up as above, and dips are apparent but variable (30-37°). W/-2" strk of dk brn, fn grnd, soft oil sand at 6" from top of core Gives dk amber cut. W/ occas 1"-2" strks of fn grnd, soft, <u>spottily oil stnd gy sd.</u>
			4'6"		SLTST & SS	Closely interbdd (50/50) in 2"-6" strks. SS is usually gray but occas <u>slightly oil stnd</u> lt brn, W/ weak odor & pale cut. Dips on sltst-SS contact, 38°.
			3'		OIL SD	Lt brn, med-fn grnd, soft & friable, clean & perm, evenly stnd, but has 6" gy strk near top W/ no apparent difference in sand texture) and 1" sltst strk at base of this gy SS strk. Amber cuts.
#217	5148	5158	4'		SANDSTONE	Lt gy, med-fn grnd to med-crse, easily friable, well sorted & appears permeable. No cuts or odor except for 1" strk at top which is <u>lightly oil stnd.</u> W/ 4" sltst strk at 1' from bottom.
#218	5158	5168	8'	6'	SS	Lt gy, med-fn grnd, soft & friable, well sorted, clean, appears permeable. No cut or oil odor.
			2'		SS SHELL	Lt gy, fn grnd, hd, well cmted.
#219	5168	5179	1'6"	1'4"	GY SS	Lt gy, masv, friable, med-fn grnd, clean, well sorted. No odor or cut.
			0'2"		SS SHELL	
#220	5179	5189				No recovery; core barrel did not seat.
#221	5189	5199	10'	4'	SS & SLTST	Closely interbdd (50/50). SS is dk gy, masv friable, fn grnd, silty. Sltst is dk gy, firm, irreg bdd W/ strks of gy sd & brn shale. One fair dip of 39°.
			3'		GY SS	Lt gy, masv, friable, med-fn grnd, appears perm.
			3'		SS & SLTST	Interbdd as above (50/50), W/ one 1" strk of lt brn, <u>weakly stnd SS</u> , giving lt amber cut.
#222	5199	5209	9'	6'	SLTST	W/ two 5" strks of SS interbdd. Sltst is dk gy, firm, W/ occas thin strks of brn organic shale. SS is dk gy, masv, soft, fn grnd, silty. No odor.
			1'6"		GY SS	Lt gy, masv, soft, fn grnd, silty.
			1'6"		SLTST	As above.

DEAR SIR:

"Boyle Community 17"

Operations at your well No. 1

Sec. 35

T. 1 S.

R. 13 W.

S. B. B. & M.,

XXXXX

Field, in

Los Angeles

County, were witnessed by

J. L. White, Inspector

representative of the supervisor,

on July 16, 19 48. There was also present N. L. Bush, Superintendent;

A. Reed, Driller.

Casing Record 13-3/8" cem. 511'; 7" cem. 4788', N. T.,
pulled from 532'. T. D. 5868'. McCullough bridging
plugs 4725', 4465', and 3750'. Plugged with cement
4900'-4775' and 540'-492'.

Junk See report No. T 1-48431,
dated July 13, 1948.

The operations were performed for the purpose of testing the location and hardness of a cement
plug placed from 540' to 492' in the process of abandonment.

The inspector arrived at the well at 2:15 p.m. and Mr. Bush reported:

1. The 7" casing was perforated 4770'-4755', 4695'-4530', 4440'-4415', and 3725'-3615'.
2. McCullough bridging plugs were left in the hole at 4725', 4465', and 3750'.
3. The 7" casing was shot at 532' and was pulled from that depth.
4. On July 16, 1948, 50 sacks of cement was pumped into the hole through 3-1/2" drill pipe hanging at 540'.

THE INSPECTOR NOTED:

1. The cement plug at the reported depth of 492' supported four points of the weight of the drill pipe.
2. The driller's tally showed 492' of drill pipe in the hole.

The test was completed at 2:45 p.m.

THE LOCATION AND HARDNESS OF THE CEMENT PLUG AT THE REPORTED DEPTH OF 492' ARE APPROVED.

SEC. 3605 WELL

DEAR SIR:

Your proposal to abandon Well No. "Boyle Community 17", 1
Section 35, T. 1 S., R. 13 W., S. E. B. & M., XXXXX Field, Los Angeles County,
dated July 14, 1948, received July 19, 1948, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

RECORDS IN ADDITION TO, OR AT VARIANCE WITH, THOSE SHOWN IN THE NOTICE:

The 7" casing was perforated 4770-4755', 4695'-4530', 4440'-4415', and 3725'-3615'.
Junk (1st hole) drill pipe, drill collar, reamer, and bit 3070'-4694'.
T. D. (1st hole) 4694', plugged with cement 980-665'.

THE NOTICE STATES:

"The present condition of the well is as follows:

1. Complete casing record.

13 3/8"	54.5#	C	511'
7"	26#	C	4788'

Total Depth: 5868' Plug: 4775' Witnessed and approved by the D.O.G.

2. Last produced.

Date

PROPOSAL:

"The proposed work is as follows:

1. Recover 7" casing from lowest possible depth, but above 3000'.
2. Cap stub of 7" casing w/ 20' cement plug.
3. Plug 531-491', across shoe of 13 3/8" casing, Division of Oil & Gas to witness.
4. Place 25' cement plug at surface, weld steel plate on top of 13 3/8" casing and Abandon hole."

DECISION:

THE PROPOSAL IS APPROVED PROVIDED THAT THIS DIVISION SHALL BE NOTIFIED AS FOLLOWS:

1. To witness the location and hardness of cement plug at 491'.
2. To inspect the completed surface cap or plug.

WELL

DEAR SIR: "Boyle Community 17"
 Operations at your well No. 1 Sec. 35, T. 1 S., R. 13 E., S. 3 B. & M.,
 XXX Field, in Los Angeles County, were witnessed by
 N. N. Sampson, Inspector, representative of the supervisor,
 on July 9, 19 48. There was also present N. L. Bush, Drilling foreman
 W. H. Backus, Driller

Casing Record 13-3/8" cem. 511'; 7" cem. 4788', not
 tested; T.D. (2nd hole) 5868', plugged with cement
 4900'-4775'

Junk (1st hole) D.P., D. C.,
 reamer and bit from 4694'-
 3070'; T.D. (1st hole) 4694',
 plugged with cement 980'-665'

The operations were performed for the purpose of testing the location and hardness of a cement
 plug placed from 4900' to 4775', in the process of plugging back.

The inspector arrived at the well at 10:00 a.m. and Mr. Bush reported:

1. A 12-1/4" rotary hole was drilled from 511' to 3446'; a 10-5/8" rotary hole from 3446' to 4450', and an 8-1/2" rotary hole from 4450' to 4694'.
2. The drill pipe twisted off and 1624' of 4" drill pipe, subs, drill collar, reamer and bit were left in the hole from 3070' to 4694'.
3. On April 29, 1948, 260 sacks of cement was pumped into the hole through drill pipe hanging at 980'.
4. The hole was cleaned out to 782' without finding set cement.
5. On May 1, 1948, 150 sacks of cement was pumped into the hole through drill pipe hanging at 580'.
6. The top of the set cement was found at 665'.
7. A removable whipstock was set at 665'.
8. A 12-1/4" rotary hole was drilled from 665' to 3027' and a 10-5/8" rotary hole from 3027' to 4789'.
9. On June 18, 1948, 7" 26 lb. casing was cemented at 4788' with 550 sacks of cement.
10. The top of the cement was found at 4740' and drilled out to 4789'.
11. A 6" rotary hole was drilled from 4789' to 5868'.
12. On July 8, 1948, 35 sacks of cement was pumped into the hole through drill pipe hanging at 4900'.

THE INSPECTOR NOTED THE FOLLOWING:

1. The drillers' tally showed 4775' of 3-1/2" drill pipe in the hole.
2. The drill pipe was lowered until the set cement at a reported depth of 4775' supported 5 points of the weight of the 3-1/2" drill pipe.

The test was completed at 10:20 a.m.

THE LOCATION AND HARDNESS OF THE CEMENT PLUG AT 4775' ARE APPROVED.

DEAR SIR:

"Boyle Community 17"
Operations at your well No. 1 Sec. 35, T. 1 S., R. 13 W., S.B. B. & M.,
xxxx Field, in Los Angeles County, were witnessed by
N. N. Sampson, Inspector, representative of the supervisor,
on March 10, 1948. There was also present W. H. Backus, Driller,
M. O. Walls, Derrickman.
Casing Record 13-3/8" cem. 511'; T. D. 512'.
Junk xxx

The operations were performed for the purpose of inspecting blowout prevention equipment and installation.

The inspector arrived at the well at 11:15 a.m. and Mr. Backus reported:

1. An 18-5/8" rotary hole was drilled from the surface to 512'.
2. On March 8, 1948, 13-3/8", 54.5 lb. casing was cemented at 511' with 425 sacks of cement.

THE INSPECTOR NOTED THAT THE WELL WAS EQUIPPED WITH THE FOLLOWING BLOWOUT PREVENTION EQUIPMENT:

1. A Shaffer ram-type control gate for closing in the well with the drill pipe out of the hole.
2. A Hydril blowout preventer for closing around the 4-1/2" drill pipe.
3. The controls for the above equipment were located outside the derrick.
4. A 2" mud fill-up line with a 2" high pressure stopcock into the 13-3/8" casing below the above equipment.

The inspection was completed at 11:40 a.m.

THE BLOWOUT PREVENTION EQUIPMENT AND INSTALLATION ARE APPROVED.

PROSPECT
WELL

DEAR SIR:

Your _____ proposal to drill Well No. "Boyle Community 17", 1
 Section 35, T. 1 S., R. 13 W., S. E.B. & M., XXXX Field, Los Angeles County,
 dated Jan. 14, 19 48, received Jan. 16, 19 48, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"The well is 283.67 feet easterly along centerline of 6th Street from its intersection with the centerline of Orme Ave., thence 78.44' northerly at 90°.

Elevation of ground above sea level 284.5 feet.

All depth measurements taken from top of Kelley bushing, which is 296 feet above ground.

We estimate that the first productive oil or gas sand should be encountered at a depth of about _____ feet.

This well is to be drilled under Section 3606 of the Public Resources Code as it will be bottomed under property which is unavailable for surface locations."

PROPOSAL:

"We propose to use the following strings of casing, either cementing or landing them as herein indicated:

Size of Casing	Weight	Grade and Type	Depth	Landed or Cemented
13-3/8"	61#	J-55	500	Cemented

(Balance of program dependent on showings)

Well is to be drilled with rotary tools.

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing."

DECISION:

THE PROPOSAL IS APPROVED PROVIDED THAT

1. No derrick shall be constructed or maintained within 150' of any other derrick, then standing, which is owned or maintained by you.
2. The producing interval of this well shall be not less than 75' from the outer boundary of the Boyle Community # 17 lease, and not less than 150' measured horizontally in the same zone from the producing interval of any other well producing or capable of producing oil or gas.
3. A subsurface directional survey shall be made for this well, and a plat of such survey filed within fifteen days of completion.
4. Mud fluid consistent with good drilling practice shall be used and the column of mud fluid maintained at all times to the surface, particularly while pulling the drill pipe.
5. Blowout prevention equipment, sufficient to provide a complete close-in of the well under pressure at any time, shall be installed.
6. Any hole to be sidetracked in any oil or gas zone shall be filled with cement, if possible.
7. THIS DIVISION SHALL BE NOTIFIED AS FOLLOWS:
 - (a) To witness a test of each possible water shut-off.
 - (b) To inspect the installed blowout prevention equipment before drilling below 1000'.

NOTE: This approval is given under Sec. 3606 of the Public Resources Code. The proposed bottom-hole location is unavailable because it is under existing surface improvements.

FIELD WORK NOTICE

Los Angeles Unified School District

Office of Environmental Health and Safety

WORK NOTICE

ROOSEVELT HIGH SCHOOL COMPREHENSIVE MODERNIZATION PROJECT

456 South Mathews Street, Los Angeles

The Los Angeles Unified School District (LAUSD) will be implementing a Preliminary Environmental Assessment (PEA) at the Roosevelt High School in Los Angeles, California. The purpose of the PEA is to determine if recognized environmental concerns identified during the Phase I Environmental Site Assessment would pose a potential health risk to current or future occupants. LAUSD voluntarily conducts environmental reviews for construction and improvement projects at its existing schools.

A licensed environmental professional, working on behalf of LAUSD, will perform the environmental investigation under the oversight of the LAUSD Office of Environmental Health and Safety. The environmental investigation will consist of sampling shallow soils and soil gas for potential contaminants in the vicinity of the existing and proposed buildings. If necessary, a cleanup will be performed or mitigation measures installed. Fieldwork is scheduled to occur during October and November 2016.

Results of the environmental investigation will be included in a PEA Report that will be made available for public review as part of the California Environmental Quality Act documentation for the project. The PEA Report will include an assessment of whether contaminants are present in soil or soil gas at concentrations that would require further investigation or a response action.

For more information regarding these activities, please contact:

Oficina de Salud y Seguridad Ambiental

AVISO DE TRABAJO

ROOSEVELT HIGH SCHOOL PROYECTO DE UNA AMPLIA MODERNIZACIÓN 456 South Mathews Street, Los Angeles

El Distrito Escolar Unificado de Los Ángeles (Los Angeles Unified School District, LAUSD) va a implementar una Evaluación Ambiental Preliminar (PEA) en la Escuela Roosevelt High School en Los Ángeles, California. El objetivo de esta evaluación es determinar si reconocidos problemas ambientales, que fueron identificados durante la Evaluación Ambiental del Sitio (Fase 1), presentarían un potencial riesgo de salud a los ocupantes actuales o futuros. LAUSD realiza voluntariamente revisiones ambientales para proyectos de construcción y de mejoras en sus escuelas existentes.

Un profesional ambiental acreditado, trabajando en representación de LAUSD, va a realizar la investigación ambiental bajo la supervisión de la Oficina de Salud y Seguridad Ambiental de LAUSD (LAUSD Office of Environmental Health and Safety). La investigación ambiental va a consistir en coleccionar muestras de tierra del subsuelo y gases del suelo para identificar posibles contaminantes en las proximidades de los edificios existentes y propuestos. Si es necesario, se llevará a cabo una limpieza o se pondrán medidas de mitigación. El trabajo sobre el terreno está programado para hacerse en octubre y noviembre de 2016.

Los resultados de la investigación ambiental serán incluidos en el reporte de la evaluación ambiental preliminar (PEA) que estará disponible para la revisión pública como parte de la documentación del proyecto de la Leyes de Calidad Ambiental de California (California Environmental Quality Act). El reporte PEA va a incluir una evaluación con respecto a ver si hay contaminantes presentes en el subsuelo o en los gases del suelo con concentraciones que tuvieran que requerir una investigación más a fondo o una acción de respuesta.

APPENDIX D
GEOPHYSICAL SURVEY REPORTS

October 10, 2016

Project/Invoice No. 16-469

TRC

9685 Research Drive
Irvine, California 92618

Attn: John Nordenstam

Re: Geophysical Investigation Report, Roosevelt High School, 456 S Mathews St, Los Angeles, California.

This report is to present the results of our geophysical survey carried out over portions of Roosevelt High School located at 456 South Mathews Street in Los Angeles, California (Figure 1). The survey was performed on October 3, 2016, and its purpose was to locate and identify, insofar as possible, pipes, conduits, utilities, and other underground obstructions within the immediate vicinity of thirty-one (31) proposed boreholes.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were brought to the field in anticipation of use. Utility locators with line tracing capabilities were also used where applicable.

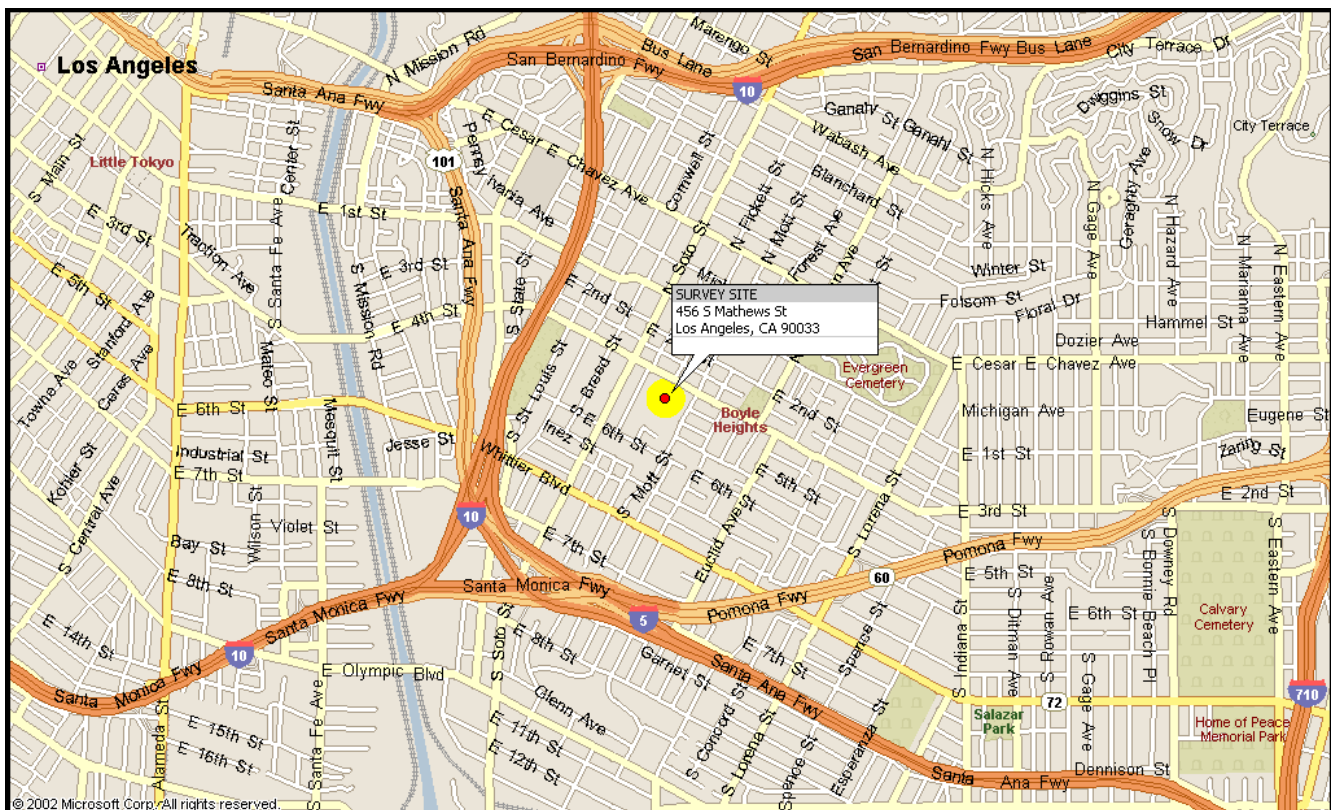

FIGURE 1. Site location map.

Survey Design – The thirty-one proposed boreholes were all within the school property and were dispersed throughout nearly all portions of the campus.

For this particular site and survey objectives, the best use of time was achieved by systematically free-traversing with the instruments while monitoring them manually, continuously, and in real-time to determine which responses were significant and due to true subsurface targets, and which were due to other non-target or above-ground features and must be ignored (examples being rebar-reinforced concrete, nearby building walls, and overhead canopies). In these situations, the free-traversing method is advantageous in that it allows for immediate detection of anomalous objects and facilitates the opportunity to investigate them further despite any obstructions and without the need to first download data. Where applicable, and depending on location, the EM devices, magnetic gradiometer, and GPR were traversed systematically over the survey areas in multiple, organized directions. Other traverses were taken for detailing and confirmation where anomalous conditions were found.

In addition, the line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals found in active electrical and communication lines.

A Geonic's model EM61 and a Fischer TW-6 M-Scope was used for the EM sampling. A Sensors & Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the

subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover at the site using spray chalk, reported to the client, and are further documented with site photographs of all areas investigated (Figures 2-27). Note that the figures are ordered according to TRC's borehole labeling scheme.

Detected items in the vicinity of the boreholes were marked on site, and are additionally highlighted in the accompanying graphics, using red for electric and signal communications, blue for water and sprinkler irrigation, green for wastewater, light yellow for gas, dark yellow for hydraulic conduit, and white for lines of unknown utility type. Please review the site photographs for the locations and orientations of all items found within the vicinity of the boreholes.

At the conclusion of the survey, all boreholes were positioned in order to provide adequate clearance from detected obstructions. In their final locations, they were marked in white with a yellow "SSS" to indicate that each had been checked by company personnel. Borehole within dirt or grass areas were marked with a white arrow painted onto the nearest asphalt, pointing towards the borehole, with the distance in feet to the borehole additionally indicated.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which such might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limited GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey

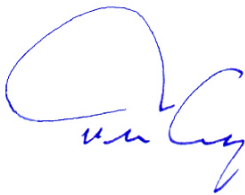

can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing or vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data generated on this project are in confidential file in this office, and are available for review by authorized persons at any time. The opportunity to participate in this investigation is very much appreciated. Please call, if there are questions.

Re: 2nd Geophysical Investigation Report, Roosevelt High School, 456 S Mathews St, Los Angeles, California.

This report is to present the results of our second geophysical survey carried out over portions of Roosevelt High School located at 456 South Mathews Street in Los Angeles, California (Figure 1). The survey was performed on March 25-26, 2017, and its purpose was to locate and identify, insofar as possible, pipes, conduits, utilities, and other underground obstructions within the immediate vicinity of fifty-two (52) proposed boreholes.

Note that this project is a continuation of earlier work performed at this location on October 3, 2016 for which the results were submitted to TRC in a report dated October 10, 2016 (SSS Project 16-469). The reader may be referred to this earlier document for additional information regarding this earlier phase of work.

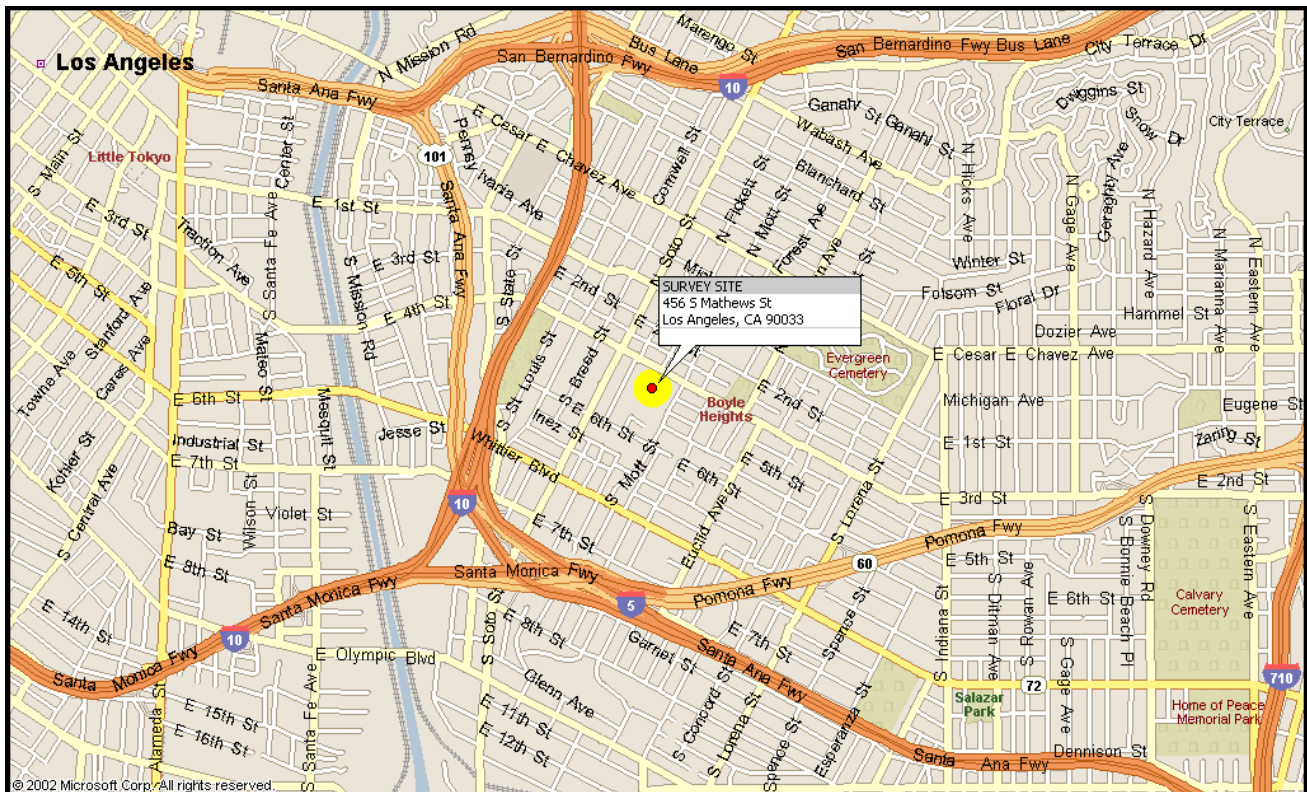

FIGURE 1. Site location map.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were brought to the field in anticipation of use. Utility locators with line tracing capabilities were also used where applicable.

Survey Design – The fifty-two proposed boreholes were all within the school property and were dispersed throughout nearly all portions of the campus, but mostly within its eastern-most half. TRC, for their own purposes, has divided the campus into sections and labeled them Areas 1-9. The boreholes investigated during this survey were located in Areas 2, 3, 5, 6, and 9.

For this particular site and survey objectives, the best use of time was achieved by systematically free-traversing with the instruments while monitoring them manually, continuously, and in real-time to determine which responses were significant and due to true subsurface targets, and which were due to other non-target or above-ground features and must be ignored (examples being rebar-reinforced concrete, nearby building walls, and overhead canopies). In these situations, the free-traversing method is advantageous in that it allows for immediate detection of anomalous objects and facilitates the opportunity to investigate them further despite any obstructions and without the need to first download data. Where applicable, and depending on location, the EM devices, magnetic gradiometer, and GPR were traversed systematically over the survey areas in multiple, organized directions. Other traverses were taken for detailing and confirmation where anomalous conditions were found.

In addition, the line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals found in active electrical and communication lines.

A Geonic's model EM61 and a Fischer TW-6 M-Scope was used for the EM sampling. A Sensors & Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of

approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover at the site using temporary spray chalk, reported to the client, and are further documented with site photographs of all areas investigated, grouped according to the TRC's area number in which they were located in (Figures 2-42).

Detected items in the vicinity of the boreholes were marked on site, and are additionally highlighted in the accompanying graphics, using red for electric and possible signal communications, orange for confirmed signal communications, blue for water and sprinkler irrigation, green for wastewater, yellow for gas, and white for lines of unknown utility type. Please review the site photographs for the locations and orientations of all items found within the vicinity of the boreholes.

At the conclusion of the survey, all boreholes were positioned in order to provide adequate clearance from detected obstructions. In their final locations, they were marked in pink with a yellow "SSS" to indicate that each had been checked by company personnel. Boreholes within dirt or grass areas were additionally marked with a pink flag.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which such might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full

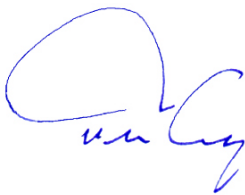

traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limited GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing or vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data generated on this project are in confidential file in this office, and are available for review by authorized persons at any time. The opportunity to participate in this investigation is very much appreciated. Please call, if there are questions.

Re: 3rd Geophysical Investigation Report, Roosevelt High School, 456 S Mathews St, Los Angeles, California.

This report is to present the results of our third geophysical survey carried out over portions of Roosevelt High School located at 456 South Mathews Street in Los Angeles, California (Figure 1). The survey was performed on June 14, 2017, and its purpose was to locate and identify, insofar as possible, pipes, conduits, utilities, and other underground obstructions within the immediate vicinity of fourteen (14) proposed boreholes.

Note that this project is a continuation of two earlier surveys performed at this location on October 3, 2016 and March 25-26, 2017 for which the results were submitted to TRC in two reports dated October 10, 2016 (SSS Project 16-469) and April 7, 2017 (SSS Project 17-124). The reader may be referred to these earlier documents for additional information regarding the total project.

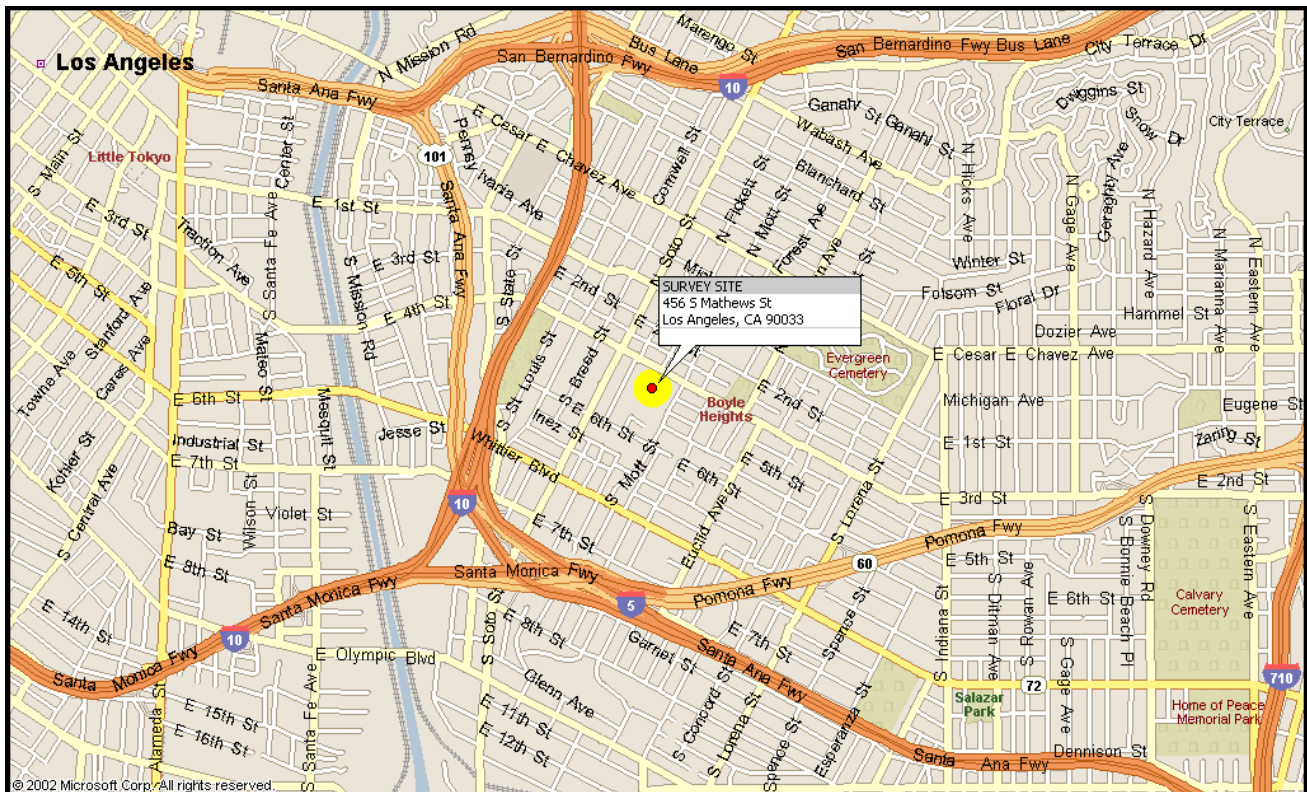

FIGURE 1. Site location map.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were brought to the field in anticipation of use. Utility locators with line tracing capabilities were also used where applicable.

Survey Design – TRC, for their own purposes, has divided the campus into sections and labeled them Areas 1-9. The fourteen proposed boreholes during this survey were located in Areas 2 and 9.

For this particular site and survey objectives, the best use of time was achieved by systematically free-traversing with the instruments while monitoring them manually, continuously, and in real-time to determine which responses were significant and due to true subsurface targets, and which were due to other non-target or above-ground features and must be ignored (examples being rebar-reinforced concrete, nearby building walls, and overhead canopies). In these situations, the free-traversing method is advantageous in that it allows for immediate detection of anomalous objects and facilitates the opportunity to investigate them further despite any obstructions and without the need to first download data. Where applicable, and depending on location, the EM devices, magnetic gradiometer, and GPR were traversed systematically over the survey areas in multiple, organized directions. Other traverses were taken for detailing and confirmation where anomalous conditions were found.

In addition, the line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals found in active electrical and communication lines.

A Geonic's model EM61 and a Fischer TW-6 M-Scope was used for the EM sampling. A Sensors & Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the

side.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover at the site using temporary spray chalk, reported to the client, and are further documented with site photographs of all areas investigated, grouped according to the TRC's area number in which they were located in (Figures 2-14).

Detected items in the vicinity of the boreholes were marked on site, and are additionally highlighted in the accompanying graphics, blue for sprinkler irrigation, green for wastewater, and white for the extended footing for a retaining wall. Please review the site photographs for the locations and orientations of all items found within the vicinity of the boreholes.

At the conclusion of the survey, all boreholes were positioned in order to provide adequate clearance from detected obstructions. In their final locations, they were marked in pink with a yellow "SSS" to indicate that each had been checked by company personnel. Boreholes within dirt or grass areas were additionally marked with a pink flag.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which such might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limited GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing

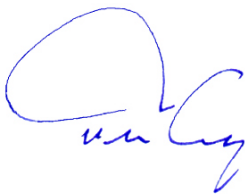

signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing or vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data generated on this project are in confidential file in this office, and are available for review by authorized persons at any time. The opportunity to participate in this investigation is very much appreciated. Please call, if there are questions.

Re: ATL Work Order Number : 1603543

Client Reference : LAUSD Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 08, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", written in a cursive style.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: LAUSD Roosevelt HS, 265642.0000 / TA02

Hi John,

We have a couple of notes/questions for the samples received last weekend.

- Samples received 10/8- the IB-1-10/8/16 samples is not marked for analysis **Sample ID should be EB-1-10/8/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082**
- Sample IB-1-10/9/16 received 10/9- the CoC is marked for EPA 8021, based on your email I believed this should be EPA 8081. **Sample ID should be EB-1-10/9/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082**

Please advise. Attached are the CoC's for these samples.

Thank you,

Carmen Aguila
Sample Control

Advanced Technology Laboratories
www.atlglobal.com
Tel: (562) 989-4045 ext. 245
Fax: (562) 989-4040

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

Subject: LAUSD Roosevelt HS PEA - Duplicate Samples for October 8 and 9, 2016
Attachments: DOC101716-004.pdf

Rachelle – as per our discussion today, duplicate samples were not collected during the field sampling activities at LAUSD Roosevelt HS on October 8 and 9, 2016. Please pull an aliquot from the following samples to be used as a duplicate sample and perform the analyses as indicated below. Attached are copies of the COCs with the samples marked that should have duplicates.

Samples collected on October 8, 2016

- Sample F-9-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample D-9-2.5' - HOLD
- Sample B-10-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample G-13-2.5' – HOLD

Samples collected on October 9, 2016

- Sample H-17-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample E-14-2.5' - HOLD
- Sample C-16-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample B-13-2.5' – HOLD

- Sample F-14-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample D-14-2.5' – HOLD
- Sample B-16-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample K-16-2.5' – HOLD

I will be sending you addition instructions for sample compositing and analysis tomorrow. Let me know if you have any questions.

Thanks,

John Nordenstam, PG

Re: ATL Work Order Number : 1603543

Client Reference : LAUSD Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 08, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

1. Sample received hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples submitted after 3:00 PM, are considered received the following business day at 8:00 AM.
3. The following surcharges apply:
TAT = 0: 300% Surcharge SAME BUSINESS DAY (if received by 9:00 AM)
TAT = 1: 50% Surcharge NEXT BUSINESS DAY (if received by 9:00 AM)
TAT = 2: 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
TAT = 3: 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
TAT = 4: 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
TAT = 5: 10% Surcharge 5TH BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab - ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for five (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
- Liquid & solid samples: Complimentary storage for receipt of samples; \$20/sample/week if extended storage is requested.
- All samples: Complimentary storage for ten (10) calendar days from receipt of samples; \$20/sample/week if extended storage is requested.
- Hard copy and regenerated reports/EDDs: \$17.50 per hard copy report requested; \$50.00 per regenerated/reformat ed report; \$25 per reprocessed EDD.
10. Rush TAT/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of \$7 per sample.

Subject: LAUSD Roosevelt HS, 265642.0000 / TA02

Hi John,

We have a couple of notes/questions for the samples received last weekend.

- Samples received 10/8- the IB-1-10/8/16 samples is not marked for analysis **Sample ID should be EB-1-10/8/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082**
- Sample IB-1-10/9/16 received 10/9- the CoC is marked for EPA 8021, based on your email I believed this should be EPA 8081. **Sample ID should be EB-1-10/9/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082**

Please advise. Attached are the CoC's for these samples.

Thank you,

Carmen Aguila
Sample Control

Advanced Technology Laboratories
www.atlglobal.com
Tel: (562) 989-4045 ext. 245
Fax: (562) 989-4040

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

Subject: LAUSD Roosevelt HS PEA - Duplicate Samples for October 8 and 9, 2016
Attachments: DOC101716-004.pdf

Rachelle – as per our discussion today, duplicate samples were not collected during the field sampling activities at LAUSD Roosevelt HS on October 8 and 9, 2016. Please pull an aliquot from the following samples to be used as a duplicate sample and perform the analyses as indicated below. Attached are copies of the COCs with the samples marked that should have duplicates.

Samples collected on October 8, 2016

- Sample F-9-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample D-9-2.5' - HOLD
- Sample B-10-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample G-13-2.5' – HOLD

Samples collected on October 9, 2016

- Sample H-17-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample E-14-2.5' - HOLD
- Sample C-16-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample B-13-2.5' – HOLD

- Sample F-14-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample D-14-2.5' – HOLD
- Sample B-16-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample K-16-2.5' – HOLD

I will be sending you addition instructions for sample compositing and analysis tomorrow. Let me know if you have any questions.

Thanks,

John Nordenstam, PG

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Re: ATL Work Order Number : 1603544

Client Reference : LAUSD Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 09, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Our copy reports will be disposed of after 45 calendar days from report date.

9. Storage and Report Fees:

- Liquid & solid samples: Complimentary storage for forty-five (45) calendar days from receipt of samples; \$2/sample/month if extended storage or hold is requested.
- Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; \$20/ sample/week if extended storage is requested.

TAT = 0 : 300% Surcharge SAME BUSINESS DAY (if received by 9:00 AM)
TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)

- Hard copy and regenerated reports/EODs: \$17.50 per hard copy request; \$50.00 per regenerated/reformat ed report;
\$35 per regenerated EDD
10. Rush TCTP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of \$7 per sample.

4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT + 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab ... ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air

Hi John,

We have a couple of notes/questions for the samples received last weekend.

- Samples received 10/8- the IB-1-10/8/16 samples is not marked for analysis **Sample ID should be EB-1-10/8/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082**
- Sample IB-1-10/9/16 received 10/9- the CoC is marked for EPA 8021, based on your email I believed this should be EPA 8081. **Sample ID should be EB-1-10/9/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082**

Please advise. Attached are the CoC's for these samples.

Thank you,

Carmen Aguila

Cc: Surrency, Ross; Maxwell, Jeff
Subject: LAUSD Roosevelt HS - Correction to Sample IDs 10-9-16

Carmen – There are two sample IDs for samples collected on October 10, 2016, that are incorrect:

- Sample J-15-0.5 collected at 1300 should be labeled J-14-0.5 (page 4 of COC)
- Sample J-15-2.5 collected at 1310 should be labeled J-14-2.5 (page 4 of COC)

A copy of the COC is attached. Let me know if you have any questions.

Warren,

On the October 9 COCs for Roosevelt HS, you wrote J-15 down twice (once on page 4 and once on page 5). Please try and figure out which one is correct and if the 2nd J-15 is actually another point.

Thanks,

Ross Surrency, PG
Senior Project Geologist

Re: ATL Work Order Number : 1603544

Client Reference : LAUSD Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 09, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", written in a cursive style.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples submitted after 3:00 PM, are considered received the following business day at 8:00 AM.
3. The following surcharges apply to all samples:
TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (received by 9:00 AM)
TAT = 2 : 50% Surcharge NEXT BUSINESS DAY (received by 5:00 PM)
TAT = 3 : 30% Surcharge 2ND BUSINESS DAY (received by 5:00 PM)
TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (received by 5:00 PM)
TAT = 5 : 10% Surcharge 7TH BUSINESS DAY (received by 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for five (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
- Liquid & solid samples: Complimentary storage for forty-five (45) calendar days from receipt of samples; \$20/sample/month if extended storage or hold is requested.
- Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; \$20/sample/week if extended storage is requested.
- Hard copy and regenerated reports/EDOs: \$17.50 per hard copy report requested; \$50.00 per regenerated/reformat ed report; \$35 per reproduced EDO.
10. Rush TAT/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of \$7 per sample.

Subject: LAUSD Roosevelt HS, 265642.0000 / TA02

Hi John,

We have a couple of notes/questions for the samples received last weekend.

- Samples received 10/8- the IB-1-10/8/16 samples is not marked for analysis **Sample ID should be EB-1-10/8/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082**
- Sample IB-1-10/9/16 received 10/9- the CoC is marked for EPA 8021, based on your email I believed this should be EPA 8081. **Sample ID should be EB-1-10/9/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082**

Please advise. Attached are the CoC's for these samples.

Thank you,

Carmen Aguila

Tel: (562) 989-4045 ext. 245
Fax: (562) 989-4040

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

Subject: LAUSD Roosevelt HS - Correction to Sample IDs 10-9-16

Carmen – There are two sample IDs for samples collected on October 10, 2016, that are incorrect:

- Sample J-15-0.5 collected at 1300 should be labeled J-14-0.5 (page 4 of COC)
- Sample J-15-2.5 collected at 1310 should be labeled J-14-2.5 (page 4 of COC)

A copy of the COC is attached. Let me know if you have any questions.

Warren,

On the October 9 COCs for Roosevelt HS, you wrote J-15 down twice (once on page 4 and once on page 5). Please try and figure out which one is correct and if the 2nd J-15 is actually another point.

Thanks,

Ross Surrency, PG

Subject: LAUSD Roosevelt HS PEA - Duplicate Samples for October 8 and 9, 2016
Attachments: DOC101716-004.pdf

Rachelle – as per our discussion today, duplicate samples were not collected during the field sampling activities at LAUSD Roosevelt HS on October 8 and 9, 2016. Please pull an aliquot from the following samples to be used as a duplicate sample and perform the analyses as indicated below. Attached are copies of the COCs with the samples marked that should have duplicates.

Samples collected on October 8, 2016

- Sample F-9-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample D-9-2.5' - HOLD
- Sample B-10-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample G-13-2.5' – HOLD

Samples collected on October 9, 2016

- Sample H-17-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample E-14-2.5' - HOLD
- Sample C-16-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample B-13-2.5' – HOLD
- Sample F-14-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample D-14-2.5' – HOLD
- Sample B-16-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample K-16-2.5' – HOLD

I will be sending you addition instructions for sample compositing and analysis tomorrow. Let me know if you have any questions.

Thanks,

John Nordenstam, PG

Subject: RE: LAUSD Roosevelt HS - Additional Laboratory Analysis of Soil Samples

Hi John and Jeff,

Please confirm if you need STLC extraction only:

please conduct STLC extractions for lead on the following samples:

- Sample B-13-0.5
- Sample B-16-0.5
- Sample C-13-0.5
- Sample C-17-0.5

Thanks,
Rachelle

Subject: LAUSD Roosevelt HS - Additional Laboratory Analysis of Soil Samples
Importance: High

Rachelle – Based on the results of recent laboratory analysis of soil samples collected from LAUSD Roosevelt HS, please analyze the following additional samples:

- Sample B-13-2.5 - for arsenic and lead using EPA Method 6010B
- Sample B-14-2.5 - for arsenic using EPA Method 6010B
- Sample B-15-2.5- for arsenic using EPA Method 6010B
- Sample B-16-2.5 – for arsenic and lead using EPA Method 6010B

- Sample C-13-2.5 – for lead using EPA Method 6010B
- Sample C-17-2.5 - for lead using EPA Method 6010B

In addition, please conduct STLC extractions for lead on the following samples:

- Sample B-13-0.5
- Sample B-16-0.5
- Sample C-13-0.5
- Sample C-17-0.5

Please follow up with Jeff Maxwell if you have any questions regarding this request.

Thanks,

John Nordenstam, PG

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Enclosed are the results for sample(s) received on October 09, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
C-13-0.5	1603544-33	Soil	10/09/16 12:00	10/09/16 16:55
B-13-0.5	1603544-35	Soil	10/09/16 12:20	10/09/16 16:55

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Irvine , CA 92618

Project Number : LAUSD Roosevelt HS, 265642.0000 / TA

Report To : John Nordenstam

Reported : 01/11/2017

Notes and Definitions

J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: LAUSD Roosevelt HS - Additional Laboratory Analyses of Soil Samples for STLC and TCLP
Attachments: Draft Table 2 - STLC and TCLP.xlsx

Importance: High

Rachelle – we need to conduct additional analyses for STLC and TCLP on the soil samples collected from LAUSD Roosevelt HS in Los Angeles. There are a total of:

- 65 samples to be analyzed for STLC for lead
- 6 samples to be analyzed for TCLP for lead
- 1 sample to be analyzed for STLC for arsenic

Attached is a spreadsheet showing the soil samples, the required analysis, and the corresponding laboratory report number for each of the samples. Please include TRC PO # 100816 on your invoice. Let me know if you have any questions.

Thanks,

John Nordenstam, PG

Notes:

Table summarizes arsenic and lead laboratory analytical reports for soil samples.

Samples with detectable concentrations presented in **bold font**.

Arsenic screening level based on California background level.

TTL screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3, Table 1 (DTSC, 2015).

OCPs screening levels are based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level (carcinogenic or non-carcinogenic, lowest value) (EPA, 2015).

LAUSD = Los Angeles Unified School District

ID = Identification

bgs = below ground surface

EPA = Environmental Protection Agency

--- = not analyzed

mg/kg = milligrams per kilogram

mg/L = milligrams per liter

µg/L = micrograms per liter

DUP = Duplicate of preceding sample

J = Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit.

Result is an estimated concentration.

(1) = 3.8J Aroclor 1260

(2) = 11J Aroclor 1260

Re: ATL Work Order Number : 1603545

Client Reference : LAUSD Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 09, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Certificate of Analysis

TRC

9685 Research Drive

Irvine , CA 92618

Project Number : LAUSD Roosevelt HS, 265642.0000 / TA

Report To : John Nordenstam

Reported : 10/17/2016

Notes and Definitions

ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Thank you John.

There were two sets of CoC received on Sunday, the other water sample ID is IB-2-10/9/16. Should I go ahead and also change this to EB-2-10/9/16? Attached is a copy of the CoC.

Thank you,
Carmen

Hi John,

We have a couple of notes/questions for the samples received last weekend.

- Samples received 10/8- the IB-1-10/8/16 samples is not marked for analysis Sample ID should be EB-1-10/8/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082
- Sample IB-1-10/9/16 received 10/9- the CoC is marked for EPA 8021, based on your email I believed this should be EPA 8081. Sample ID should be EB-1-10/9/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082

Please advise. Attached are the CoC's for these samples.

Thank you,

Carmen Aguila

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

Re: ATL Work Order Number : 1603545

Client Reference : LAUSD Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 09, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Thank you John.

There were two sets of CoC received on Sunday, the other water sample ID is IB-2-10/9/16. Should I go ahead and also change this to EB-2-10/9/16? Attached is a copy of the CoC.

Thank you,
Carmen

Subject: LAUSD Roosevelt HS, 265642.0000 / TA02

Hi John,

We have a couple of notes/questions for the samples received last weekend.

- Samples received 10/8- the IB-1-10/8/16 samples is not marked for analysis Sample ID should be EB-1-10/8/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082
- Sample IB-1-10/9/16 received 10/9- the CoC is marked for EPA 8021, based on your email I believed this should be EPA 8081. Sample ID should be EB-1-10/9/16 and should be analyzed for Arsenic using EPA Method 6010B, Lead using EPA Method 6010B, Organochlorine Pesticides using EPA Method 8081A, and PCBs using EPA Method 8082

Please advise. Attached are the CoC's for these samples.

Thank you,

Carmen Aguila

Subject: LAUSD Roosevelt HS PEA - Duplicate Samples for October 8 and 9, 2016
Attachments: DOC101716-004.pdf

Rachelle – as per our discussion today, duplicate samples were not collected during the field sampling activities at LAUSD Roosevelt HS on October 8 and 9, 2016. Please pull an aliquot from the following samples to be used as a duplicate sample and perform the analyses as indicated below. Attached are copies of the COCs with the samples marked that should have duplicates.

Samples collected on October 8, 2016

- Sample F-9-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample D-9-2.5' - HOLD
- Sample B-10-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample G-13-2.5' – HOLD

Samples collected on October 9, 2016

- Sample H-17-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample E-14-2.5' - HOLD
- Sample C-16-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample B-13-2.5' – HOLD

- Sample F-14-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample D-14-2.5' – HOLD
- Sample B-16-0.5' - analyze for Arsenic and Lead using EPA Method 6010B
- Sample K-16-2.5' – HOLD

I will be sending you addition instructions for sample compositing and analysis tomorrow. Let me know if you have any questions.

Thanks,

John Nordenstam, PG

Subject: RE: LAUSD Roosevelt HS - Additional Laboratory Analysis of Soil Samples

Hi John and Jeff,

Please confirm if you need STLC extraction only:

please conduct STLC extractions for lead on the following samples:

- Sample B-13-0.5
- Sample B-16-0.5
- Sample C-13-0.5
- Sample C-17-0.5

Thanks,
Rachelle

Subject: LAUSD Roosevelt HS - Additional Laboratory Analysis of Soil Samples
Importance: High

Rachelle – Based on the results of recent laboratory analysis of soil samples collected from LAUSD Roosevelt HS, please analyze the following additional samples:

- Sample B-13-2.5 - for arsenic and lead using EPA Method 6010B
- Sample B-14-2.5 - for arsenic using EPA Method 6010B
- Sample B-15-2.5- for arsenic using EPA Method 6010B
- Sample B-16-2.5 – for arsenic and lead using EPA Method 6010B

- Sample C-13-2.5 – for lead using EPA Method 6010B
- Sample C-17-2.5 - for lead using EPA Method 6010B

In addition, please conduct STLC extractions for lead on the following samples:

- Sample B-13-0.5
- Sample B-16-0.5
- Sample C-13-0.5
- Sample C-17-0.5

Please follow up with Jeff Maxwell if you have any questions regarding this request.

Thanks,

John Nordenstam, PG

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Re: ATL Work Order Number : 1603631

Client Reference : LAUSD Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 15, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie Rodriguez", with a small "ER" monogram to the left.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 1603631

Client Reference : LAUSD Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 15, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", written in a cursive style.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D5	Sample diluted due to failing internal standard in the original run.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Re: ATL Work Order Number : 1603632

Client Reference : LAUSD ROOSEVELT HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 15, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie Rodriguez", followed by the letters "Ar" in a smaller, cursive script.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 1603632
Client Reference : LAUSD ROOSEVELT HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 15, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D5	Sample diluted due to failing internal standard in the original run.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: LAUSD Legacy High School - STLC Extraction and Analysis for Lead

Rachelle,

Please conduct STLC extraction and analysis for Lead for the following samples:

- C-12-0.5
- MB-6-0.5 DUP
- AUD-3-0.5
- AUD-4-0.5
- AUD-5-0.5
- AUD-6-0.5

Please call me with any questions.

Thanks,

Jeff

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Re: ATL Work Order Number : 1603632

Client Reference : LAUSD ROOSEVELT HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 15, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is written over a light blue horizontal line.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
PE-3-2.5	1603632-22	Soil	10/15/16 13:30	10/15/16 16:45
H-2-2.5	1603632-26	Soil	10/15/16 13:50	10/15/16 16:45

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Report To : John Nordenstam

Reported : 01/16/2017

Notes and Definitions

J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: LAUSD Roosevelt HS - Additional Laboratory Analyses of Soil Samples for STLC and TCLP
Attachments: Draft Table 2 - STLC and TCLP.xlsx

Importance: High

Rachelle – we need to conduct additional analyses for STLC and TCLP on the soil samples collected from LAUSD Roosevelt HS in Los Angeles. There are a total of:

- 65 samples to be analyzed for STLC for lead
- 6 samples to be analyzed for TCLP for lead
- 1 sample to be analyzed for STLC for arsenic

Attached is a spreadsheet showing the soil samples, the required analysis, and the corresponding laboratory report number for each of the samples. Please include TRC PO # 100816 on your invoice. Let me know if you have any questions.

Thanks,

John Nordenstam, PG

Notes:

Table summarizes arsenic and lead laboratory analytical reports for soil samples.

Samples with detectable concentrations presented in **bold font**.

Arsenic screening level based on California background level.

TTL screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3, Table 1 (DTSC, 2015).

OCPs screening levels are based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level (carcinogenic or non-carcinogenic, lowest value) (EPA, 2015).

LAUSD = Los Angeles Unified School District

ID = Identification

bgs = below ground surface

EPA = Environmental Protection Agency

--- = not analyzed

mg/kg = milligrams per kilogram

mg/L = milligrams per liter

μg/L = micrograms per liter

DUP = Duplicate of proceeding sample

J = Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit.

Result is an estimated concentration.

(1) = 3.8J Aroclor 1260

(2) = 11J Aroclor 1260

Enclosed are the results for sample(s) received on October 15, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", written in a cursive style.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
PE-3-2.5	1603632-22	Soil	10/15/16 13:30	10/15/16 16:45

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: LAUSD Roosevelt HS - Additional Laboratory Analyses of Soil Samples for TCLP
Attachments: Draft Table 2 - STLC and TCLP.xlsx

Rachelle – we need to conduct additional analyses for TCLP on the soil samples collected from LAUSD Roosevelt HS in Los Angeles. There are a total of 44 samples to be analyzed for TCLP for lead. Attached is a spreadsheet showing the soil samples, the required analysis, and the corresponding laboratory report number for each of the samples. Please include TRC PO # 100816 on your invoice. Let me know if you have any questions.

Thanks,

John Nordenstam, PG

Notes:
Table summarizes arsenic and lead laboratory analytical reports for soil samples.
Samples with detectable concentrations presented in **bold font**.
Arsenic screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRR) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level [carcinogenic or non-carcinogenic, lowest value] (EPA, 2015).
LAUSD = Los Angeles Unified School District
ID = Identification
bgs = below ground surface
EPA = Environmental Protection Agency
--- = not analyzed

mg/kg = milligrams per kilogram
mg/L = micrograms per liter
µg/L = micrograms per liter
DUP = Duplicate of preceding sample
J = Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit.
Result is an estimated concentration.

(1) = 3.8J Aroclor 1260
(2) = 1.1J Aroclor 1260

Notes:
 Table summarizes arsenic and lead laboratory analytical reports for soil samples.
 Samples with detectable concentrations presented in bold font.
 Arsenic screening level based on California background level.

TtLC screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRA) Note Number 3, Table 1 (DTSC, 2015).
 OCPs screening levels are based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRA) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level [carcinogenic or non-carcinogenic, lowest value] (EPA, 2015).

Re: ATL Work Order Number : 1603633
Client Reference : LAUSD ROOSEVELT HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 16, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie Rodriguez", followed by the initials "ar".

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Project Number : LAUSD ROOSEVELT HS, 265642.0000

Report To : John Nordenstam

Reported : 10/26/2016

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 1603633
Client Reference : LAUSD ROOSEVELT HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 16, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is written over a white background.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D5	Sample diluted due to failing internal standard in the original run.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Re: ATL Work Order Number : 1603634

Client Reference : LAUSD-Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 16, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie Rodriguez", with a small "ER" monogram to the left.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Samples will be disposed of after 14 calendar days after receipt of samples.

7. Electronic records maintained for five (5) years from report date.

8. Samples not disposed of after 45 calendar days from report date.

9. Storage and Report Fees:

 • Liquid & solid samples: Complimentary storage for forty-five (45) calendar days from receipt of samples; \$2/sample/month if extended storage or hold is requested.

 • Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; \$20/ sample/week if extended storage is requested.

 • Hard copy and regenerated reports/EDOs: \$17.50 per hard copy report requested; \$50.00 per regenerated/reforma? ed report; \$35 per reprocessed EDO.

10. Rush TCU/STLC samples: add 2 days to analysis TAT for extraction on procedure.

11. Unanalyzed samples will incur a disposal fee of \$7 per sample.

Samples submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.

The following turnaround time conditions apply:

 • TAT = 1: 100% SurchARGE, NEXT BUSINESS DAY (COB 5:00 PM)

 • TAT = 2: 50% SurchARGE, NEXT BUSINESS DAY (COB 5:00 PM)

 • TAT = 3: 30% SurchARGE, 3RD BUSINESS DAY (COB 5:00 PM)

 • TAT = 4: 20% SurchARGE, 4TH BUSINESS DAY (COB 5:00 PM)

 • TAT = 5: NO SurchARGE, 5TH BUSINESS DAY (COB 5:00 PM)

Weekend, holiday, after-hours work - ask for quote.

Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge

Unanalyzed samples will be disposed of after 14 calendar days from receipt of samples; air

Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted After 3:00 PM, are considered received the following business day at 8:00 AM.
3. The following surcharges apply to samples received after 3:00 PM:
TAT = 1: 100% Surcharges NEXT BUSINESS DAY (COB 5:00 PM)
TAT = 2: 50% Surcharges NEXT BUSINESS DAY (COB 5:00 PM)
TAT = 3: 30% Surcharges 3RD BUSINESS DAY (COB 5:00 PM)
TAT = 4: 20% Surcharges 4TH BUSINESS DAY (COB 5:00 PM)
4. Weekend holiday after-hours work - ask for quote.
5. Subcontract to the subcontract lab - ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for five (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report fees:
- Liquid & solid samples: Complimentary storage for forty-five (45) calendar days from receipt of samples; \$20/sample/month if extended storage or hold is requested.
- Regenerators: Complimentary storage for ten (10) calendar days from receipt of samples; \$20/sample/week if extended storage is requested.
- Hard copy and regenerated reports/EDDs: \$17.50 per hard copy report requested; \$50.00 per regenerated report/EDD report; \$35 per regenerated EDD.
10. Rush TAT/STIC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of \$7 per sample.

Hi John,

We would like to confirm that all the samples marked with an “X” on page 4 of 5 on the attached CoC are to be analyze for 6010 Pb, As. The test is not indicated on the CoC.

Thank you,

Carmen Aguila

Enclosed are the results for sample(s) received on October 16, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is written over a light blue horizontal line.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

1. Samples received hours: 7:30 AM to 7:00 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples submitted after 3:00 PM are considered received the following business day at 8:00 AM.
3. The following turnaround time conditions apply:
TAT = 0: 100% Surcharge NEXT BUSINESS DAY (if received by 9:00 AM)
TAT = 1: 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
TAT = 2: 200% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
TAT = 3: 300% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
TAT = 4: 400% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
TAT = 5: NO SURCHARGE, 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge relative to the subcontract lab - ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for five (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
- Liquid & solid samples: Complimentary storage for ten (10) calendar days from receipt of samples; \$20/sample/week if extended storage is requested.
- Extended storage or hold is requested.
- Rush TAT/STLC samples: add 2 days to analysis TAT for extraction on procedure.
- Hard copy and regenerated reports/EDDs: \$17.50 per hard copy report requested; \$50.00 per regenerated/reforms? ed report; \$35 per reprocessed EDD.
10. Rush TAT/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of \$7 per sample.

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Client Reference : LAUSD-Roosevelt HS, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 16, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

TRC

9685 Research Drive

Irvine , CA 92618

Project Number : LAUSD-Roosevelt HS, 265642.0000 / TA

Report To : John Nordenstam

Reported : 01/11/2017

Notes and Definitions

D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: LAUSD Roosevelt HS - Additional Laboratory Analyses of Soil Samples for STLC and TCLP
Attachments: Draft Table 2 - STLC and TCLP.xlsx

Importance: High

Rachelle – we need to conduct additional analyses for STLC and TCLP on the soil samples collected from LAUSD Roosevelt HS in Los Angeles. There are a total of:

- 65 samples to be analyzed for STLC for lead
- 6 samples to be analyzed for TCLP for lead
- 1 sample to be analyzed for STLC for arsenic

Attached is a spreadsheet showing the soil samples, the required analysis, and the corresponding laboratory report number for each of the samples. Please include TRC PO # 100816 on your invoice. Let me know if you have any questions.

Thanks,

John Nordenstam, PG
Senior Project Geologist

Notes:

Table summarizes arsenic and lead laboratory analytical reports for soil samples.

Samples with detectable concentrations presented in **bold font**.

Arsenic screening level based on California background level.

TTL screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3, Table 1 (DTSC, 2015).

OCPs screening levels are based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level (carcinogenic or non-carcinogenic, lowest value) (EPA, 2015).

LAUSD = Los Angeles Unified School District

ID = Identification

bgs = below ground surface

EPA = Environmental Protection Agency

--- = not analyzed

mg/kg = milligrams per kilogram

mg/L = milligrams per liter

μg/L = micrograms per liter

DUP = Duplicate of preceding sample

J = Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit.

Result is an estimated concentration.

(1) = 3.8J Aroclor 1260

(2) = 11J Aroclor 1260

Re: ATL Work Order Number : 1603653

Client Reference : LAUSD Roosevelt HS PEA, 265642.0000 / TA02

Enclosed are the results for sample(s) received on October 18, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is written over a light blue horizontal line.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

Notes and Definitions

S1	Surrogate recovery was above laboratory acceptance limit. No target analyte was detected in the sample.
R3	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Importance: High

Hi Carmen,

Here's the additional compositing instructions. Please log accordingly. Thanks.

Importance: High

Rachelle – as per our conversation yesterday, please collect aliquots from the following samples to be used as duplicate samples. Please analyze the duplicate samples as indicated below.

- 10/20/16 3
- 42 Area 2
- Composite A10 – Composite Samples: H4-0.5' and H5-0.5' - analyze for OCPs -DUPLICATE
- 43 Area 3
- Composite B10 – Composite Samples: F16-0.5' and F17-0.5' – analyze for OCPs -DUPLICATE
- 44 Area 5
- Composite C2 – Composite Samples: MB-4-0.5', MB-5-0.5', and MB-6-0.5' - analyze for OCPs - DUPLICATE
 - 45 • Composite C8 – Composite Samples: HVAC-1-0.5', HVAC-2-0.5', and HAC-3-0.5' - analyze for PCBs - DUPLICATE
 - 46 • Composite C12 – Composite Samples: Q4-0.5', R4-0.5', S4-0.5', and T4-0.5' - analyze for OCPs - DUPLICATE

We are approaching holding times on some of these samples, so we will have to move quickly on the analysis of these samples. Let me know if you have any questions

Thanks,

John Nordenstam, PG

Subject: LAUSD Roosevelt HS PEA - Compositing Instructions for Areas 2, 3, and 5

Importance: High

Rachelle – As per our conversation yesterday, attached are the compositing instructions for the samples collected from LAUSD Roosevelt HS for Areas 2, 3, and 5. These samples were collected on October 8, 9, 15, and 16, 2016. All composite samples are composed of samples collected from 0.5-foot and are being analyzed for organochlorine pesticides (OCPs) and polychlorinated biphenyls (PCBs). We are approaching holding times on some of these samples, so we will have to move quickly on the compositing and analysis of these samples. Please let me know if you have any questions regarding these samples.

Thanks,

John Nordenstam, PG

Re: ATL Work Order Number : 1603727

Client Reference : LAUSD Roosevelt HS, 265642.0000/TA02

Enclosed are the results for sample(s) received on October 22, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is written over a white background.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 0.5 feet)

Rachelle,

For the soil samples collected at 0.5 feet on October 22/23, 2016, please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 22, 2016 (46 samples at 0.5 feet)

- Sample W-14-0.5
- Sample X-17-0.5
- Sample Y-8-0.5
- Sample AA923-1-0.5
- Sample AA828-5-0.5

Samples collected on October 23, 2016 (39 samples at 0.5 feet)

- Sample AA651/683-3-0.5
- Sample AA955-3-0.5
- Sample AA831-3-0.5
- Sample D-8-0.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Re: ATL Work Order Number : 1603729

Client Reference : LAUSD ROOSEVELT HS, 265642.0000/TA02

Enclosed are the results for sample(s) received on October 22, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: RE: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 2.5 feet)

Rachelle,

For the requested analysis of soil samples collected at 2.5 feet (outlined in email chain below), please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 8, 2016 (21 samples at 2.5 feet)

- Sample D-9-2.5
- Sample G-13-2.5

Samples collected on October 9, 2016 (41 samples at 2.5 feet)

- Sample E-14-2.5
- Sample B-13-2.5
- Sample D-14-2.5
- Sample K-16-2.5

Samples collected on October 15, 2016 (26 samples at 2.5 feet)

- Sample H-5-2.5
- Sample D-12-2.5
- Sample MB-2-2.5

Samples collected on October 16, 2016 (41 samples at 2.5 feet)

- Sample AA653-3-2.5
- Sample UB-5-2.5
- Sample Q-4-2.5
- Sample AUD-8-2.5

Samples collected on October 22, 2016 (46 samples at 2.5 feet)

- Sample W-15-2.5
- Sample Y-12-2.5
- Sample Y-9-2.5
- Sample AA923-2-2.5
- Sample AA828-6-2.5

Samples collected on October 23, 2016 (39 samples at 2.5 feet)

- Sample AA651/683-2-2.5
- Sample AA955-2-2.5
- Sample AA831-4-2.5
- Sample C-8-2.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Samples at 2.5 feet)

Rachelle,

Please analyze all soil samples collected at 2.5 feet (currently on hold) for Arsenic and Lead.

This applies to all locations where soil samples were collected at 0.5 feet (samples analyzed already) and 2.5 feet.

This does not apply to the following samples collected on October 22 – CL1-1, CL1-2, HL1-1, HL1-2, HL2-1, HL2-2, HL3-1, HL3-2, HL4-1, HL4-2, FILL 1, and FILL 2.

Please call me with any questions or clarifications.

Jeff

Subject: LAUSD Roosevelt High School - Additional Analyses (Duplicate Samples at 0.5 feet)

Rachelle,

For the soil samples collected at 0.5 feet on October 22/23, 2016, please pull an aliquot from the following samples to be used as duplicate samples and perform the analyses for Arsenic and Lead (EPA Method 6010B).

Samples collected on October 22, 2016 (46 samples at 0.5 feet)

- Sample W-14-0.5
- Sample X-17-0.5
- Sample Y-8-0.5
- Sample AA923-1-0.5
- Sample AA828-5-0.5

Samples collected on October 23, 2016 (39 samples at 0.5 feet)

- Sample AA651/683-3-0.5
- Sample AA955-3-0.5
- Sample AA831-3-0.5
- Sample D-8-0.5

Please call me if you have any questions or need further clarification.

Thanks,

Jeff

Re: ATL Work Order Number : 1603729

Client Reference : LAUSD ROOSEVELT HS, 265642.0000/TA02

Enclosed are the results for sample(s) received on October 22, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is positioned above the printed name.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
V-16-0.5	1603729-07	Soil	10/22/16 9:25	10/22/16 18:30
W-14-2.5	1603729-16	Soil	10/22/16 11:05	10/22/16 18:30
X-14-2.5	1603729-28	Soil	10/22/16 12:10	10/22/16 18:30

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Project Number : LAUSD ROOSEVELT HS, 265642.0000/

Report To : John Nordenstam

Reported : 01/16/2017

Notes and Definitions

D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: LAUSD Roosevelt HS - Additional Laboratory Analyses of Soil Samples for STLC and TCLP
Attachments: Draft Table 2 - STLC and TCLP.xlsx

Importance: High

Rachelle – we need to conduct additional analyses for STLC and TCLP on the soil samples collected from LAUSD Roosevelt HS in Los Angeles. There are a total of:

- 65 samples to be analyzed for STLC for lead
- 6 samples to be analyzed for TCLP for lead
- 1 sample to be analyzed for STLC for arsenic

Attached is a spreadsheet showing the soil samples, the required analysis, and the corresponding laboratory report number for each of the samples. Please include TRC PO # 100816 on your invoice. Let me know if you have any questions.

Thanks,

Notes:

Table summarizes arsenic and lead laboratory analytical reports for soil samples.

Samples with detectable concentrations presented in **bold font**.

Arsenic screening level based on California background level.

TTL screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3, Table 1 (DTSC, 2015).

OCPs screening levels are based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRRA) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level (carcinogenic or non-carcinogenic, lowest value) (EPA, 2015).

LAUSD = Los Angeles Unified School District

ID = Identification

bgs = below ground surface

EPA = Environmental Protection Agency

--- = not analyzed

mg/kg = milligrams per kilogram

mg/L = milligrams per liter

μg/L = micrograms per liter

DUP = Duplicate of preceding sample

J = Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit.

Result is an estimated concentration.

(1) = 3.8J Aroclor 1260

(2) = 11J Aroclor 1260

Re: ATL Work Order Number : 1603729

Client Reference : LAUSD ROOSEVELT HS, 265642.0000/TA02

Enclosed are the results for sample(s) received on October 22, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", is written over a light blue horizontal line.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
W-14-2.5	1603729-16	Soil	10/22/16 11:05	10/22/16 18:30

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.

Subject: LAUSD Roosevelt HS - Additional Laboratory Analyses of Soil Samples for TCLP
Attachments: Draft Table 2 - STLC and TCLP.xlsx

Rachelle – we need to conduct additional analyses for TCLP on the soil samples collected from LAUSD Roosevelt HS in Los Angeles. There are a total of 44 samples to be analyzed for TCLP for lead. Attached is a spreadsheet showing the soil samples, the required analysis, and the corresponding laboratory report number for each of the samples. Please include TRC PO # 100816 on your invoice. Let me know if you have any questions.

Thanks,

John Nordenstam, PG

Notes:

Table summarizes arsenic and lead laboratory analytical reports for soil samples.

Samples with detectable concentrations presented in **bold font**.

Arsenic screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRRR) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level [carcinogenic or non-carcinogenic, lowest value] (EPA, 2015).

LAUSD = Los Angeles Unified School District

ID = Identification

bgs = below ground surface

EPA = Environmental Protection Agency

--- = not analyzed

mg/kg = milligrams per kilogram

mg/L = micrograms per liter

µg/L = micrograms per liter

DUP = Duplicate of preceding sample

J = Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit.

Result is an estimated concentration.

(1) = 3.8J Aroclor 1260

(2) = 1.1J Aroclor 1260

Notes:

Table summarizes arsenic and lead laboratory analytical reports for soil samples.

Samples with detectable concentrations presented in **bold font**.

Arsenic screening level based on California background level.

TtLC screening level based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRA) Note Number 3, Table 1 (DTSC, 2015).

OCPs screening levels are based on Department of Toxic Substances Control (DTSC) Office of Human Ecological Risk (HERO) Human Health Risk Assessment (HRA) Note Number 3-Table 1 Cancer Value (or Non-Cancer value, lowest value) (DTSC, 2015) or United States Environmental Protection Agency (US EPA) Regional Screening Level [carcinogenic or non-carcinogenic, lowest value] (EPA, 2015).

Re: ATL Work Order Number : 1603730
Client Reference : ROOSEVELT HS, 265642

Enclosed are the results for sample(s) received on October 22, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read "E Rodriguez", written in a cursive style.

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

All volatile analyses were performed using 5035 preservation requirements. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

S12	Surrogate recovery outside in-house established limit but within method default criteria.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
- (3) Results are wet unless otherwise specified.
