

# Best Practice For Transporting Knives Safely

## Preparation & Cleaning

1. **Wash and sanitize knives before transporting:** ensure all knives are thoroughly washed, sanitized, and air dried.
2. **Insert into Knife Sleeves:** Each knife must be securely placed in its designated knife sleeve to avoid damage and ensure safety during transport.

## Packing & Storage

1. **Place Knives in a Transport Box:** Arrange the knives neatly inside the designated transport box, ensuring that the sleeves prevent movement and blade exposure.

2. **Secure the Box:** Close the transport box properly, ensuring it is latched or locked to prevent accidental openings.

3. **Choose a Safe Storage Location:** Place the transport box in a stable and secure area, such as the trunk of the car or a designated locked compartment. Avoid placing knives within easy reach inside the vehicle cabin.

## Handling

**Proper handling:** Hold the transport box firmly with both hands, keeping it close to your body to maintain balance and avoid accidental drops. **Note:** Keep the Box Upright – When carrying the box, ensure it remains upright to prevent shifting of knives.

By following these best practices, you ensure knife safety, prevent contamination, and protect both yourself and others during transport.
