ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/21/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

West Map:	5630735 CALABASAS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

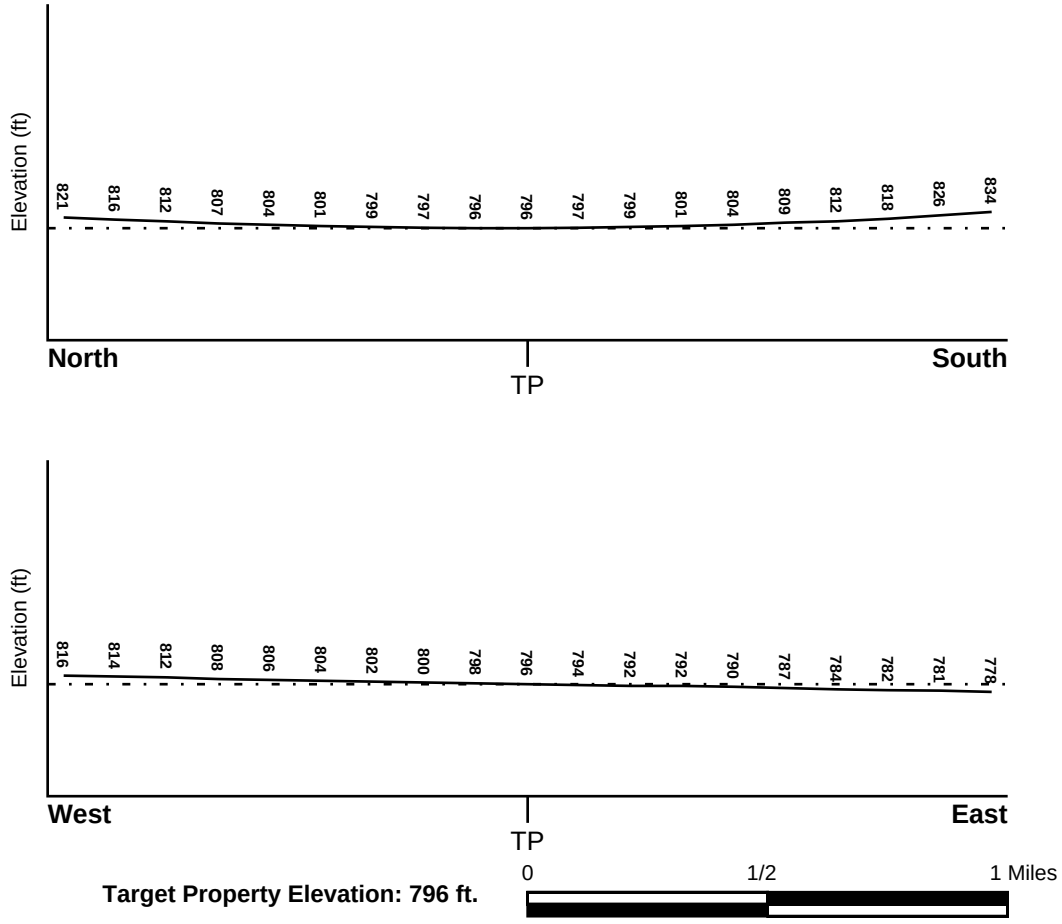
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1280F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1290F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CANOGA PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

9G	1/2 - 1 Mile ESE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Mocho

Soil Surface Texture: loam

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	16 inches	75 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Cropley

Soil Surface Texture: clay

Hydrologic Group: Not reported

Soil Drainage Class:

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Eco & Associates, Inc. on Nov 30, 2018.

TARGET PROPERTY

6850 Topanga Canyon Blvd
Canoga Park, CA 91303

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Historical Topo Map Report

11/30/18

Site Name:	Client Name:
CANOGA PARK HIGH SCHOC	Eco & Associates, Inc.
6850 Topanga Canyon Blvd	18231 Irvine Blvd Suite 204
Canoga Park, CA 91303	Tustin, CA 92780
EDR Inquiry # 5499207.4	Contact: Filmon Tesfaslasie

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Eco & Associates, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# Eco-18-1231

Project: CANOGA PARK HIGH SCHOC

Coordinates:

Latitude:	34.195576 34° 11' 44" North
Longitude:	-118.604331 -118° 36' 16" West

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Eco & Associates, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Dear Mr Tesfaslasie:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/facility referenced above.

We would also like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. Envirostor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view Envirostor.

If you have any questions or would like further information regarding your request, please contact me at (818) 717-6521.

Sincerely,

Robert Hardison

PUBLIC RECORDS REQUEST FORM

PRU Office Use Only

CONTROL NO.

Online access is available for certain public information about SCAQMD-regulated facilities through SCAQMD's search tool -FIND **(Facility Information Detail). Go to the SCAQMD Website at http://www3.aqmd.gov/webappl/fim/prog/search.aspx.**

The following types of records are immediately available on FIND:
Permits to Operate, Equipment Lists, Notices of Violation, Notices to Comply, and Emissions Summaries

Please read the Instructions for Requesting Records, and then fill out this form completely. You may include an attachment to the form, if necessary.

REQUESTOR INFORMATION

NAME: Filmon Tesfaslasie		DATE: December 3, 2018
COMPANY: Eco & Associates, Inc.		
MAILING ADDRESS: 18231 Irvine Blvd., Suite 204,		
CITY: Tustin	STATE: CA	ZIP CODE: 92780
PHONE NUMBER: 714-289-0995	FAX NUMBER: 714-289-0965	
EMAIL ADDRESS: ftesfaslasie@ecoinc.info		

REQUESTED RECORDS. Please be as specific as possible in describing the records you are seeking. The more specific you are, the easier it will be to determine if such records exist in District files. Please contact the Public Records Unit if you need assistance in identifying District records.

Permits, notice of violation, complaints, asbestos record, and other related environmental records.

TIME PERIOD OF RECORDS REQUESTED From: 1924 To: present

REQUESTED FACILITY INFORMATION (If Applicable).
Please limit one facility or site address per request form.

FACILITY NAME: Canoga Park High School		
FACILITY ADDRESS: 6850 Topanga Canyon Blvd.		
CITY: Los Angeles	STATE:CA	ZIP CODE: 91303
FACILITY I.D. NO. (if known):	APPL. OR PERMIT NO. (if known):	

☐ I wish to inspect the requested records, where applicable, or receive the requested records electronically at no charge. I do not want copies produced at this time.
☐ I request that the SCAQMD contact me prior to copying the requested records if the cost exceeds $20.00.
☐ I would like copies of the requested records and I hereby agree to reimburse the SCAQMD for the direct cost of duplication in accordance with Gov. Code Sec. 6253(b). See the Instructions page for direct costs of duplication.

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT
21865 East Copley Drive, Diamond Bar, CA 91765

PERMIT TO CONSTRUCT/OPERATE

Permit No.
D72304
A/N 279473
Page 1

This initial permit must be renewed ANNUALLY unless the equipment is moved, or changes ownership.
If the billing for annual renewal fee (Rule 301.f) is not received by the expiration date, contact the District.

Legal Owner or Operator: **ID 072693**

LA UNI SCH DIST, CANOGA PARK SENIOR HIGH
ATTN: H.E. MENESES
P O BOX 2298, BSC RM 303
LOS ANGELES, CA 90051

Equipment Location: 6850 TOPANGA CANYON BLVD, CANOGA PARK, CA 91303-2354

Equipment Description:

BOILER, WEIL-MCLAIN, SECTIONAL TYPE, MODEL HR44-12, 2,800,000 BTU PER HOUR, WITH ONE VIKES INSTA-THERM, BIT NO. 2800X, NATURAL GAS-FIRED LOW NOX BURNER.

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. THE BOILER SHALL BE FIRED ON NATURAL GAS ONLY.

4. THE OXIDES OF NITROGEN CONCENTRATIONS IN THE FLUE GAS SHALL NOT EXCEED 30 PPM, CALCULATED AS NO2, AND THE CARBON MONOXIDE CONCENTRATIONS SHALL NOT EXCEED 400 PPM, BOTH CALCULATED AT 3 PERCENT OXYGEN ON A DRY BASIS AND AVERAGED OVER A MINIMUM OF 15 MINUTES.

5. THE OWNER OR OPERATOR OF THIS BOILER SHALL CONDUCT SOURCE TESTS UNDER THE FOLLOWING CONDITIONS:

   A. SOURCE TESTING SHALL BE CONDUCTED WITHIN 60 CALENDAR DAYS AFTER NORMAL OPERATION OF THE EQUIPMENT HAS BEEN ESTABLISHED, BUT NOT LATER THAN JULY 1, 1994.

   B. THE SOURCE TEST SHALL MEASURE OXIDES OF NITROGEN, CARBON MONOXIDE, AND OXYGEN BY USING DISTRICT METHOD 100.1. THE TESTS SHALL BE CONDUCTED WHILE THE BOILER IS OPERATING AT MAXIMUM, MINIMUM, AND AVERAGE LOADS. THE SAMPLING TIME AT EACH LOAD SHALL BE AT A MINIMUM OF 15 MINUTES.

FILE COPY

CONTINUATION OF PERMIT TO CONSTRUCT/OPERATE

C. THE SOURCE TESTS SHALL BE CONDUCTED BY A TESTING LABORATORY CERTIFIED BY THE CALIFORNIA AIR RESOURCES BOARD IN THE REQUIRED TEST METHODS FOR EACH CRITERIA POLLUTANT TO BE MEASURED, AND COMPLIANCE WITH DISTRICT RULE 304.

D. A WRITTEN REPORT OF THE SOURCE TEST RESULTS SHALL BE FILED WITH THE DISTRICT NO LATER THAN 60 DAYS AFTER THE DATE OF THE SOURCE TEST. THE SOURCE TEST REPORT SHALL INCLUDE FUEL FLOW RATE AT EACH LOAD. THE REPORT SHALL ALSO PRESENT THE EMISSIONS DATA IN UNITS OF PARTS PER MILLION (PPM), ON A DRY BASIS AT 3% OXYGEN. THE OWNER OR OPERATOR OF THIS BOILER SHALL RETAIN A COPY OF THE SOURCE TEST, AND SHALL MAKE IT AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

Re: P/O'S, NOV'S, COMPLAINTS, & ASBESTOS RECORDS FOR CANOGA PARK HIGH SCHOOL, 6850 TOPANGA CANYON BLVD, CANOGA PARK, CA, ID #72693.

After a thorough search of this agency's records, the following records were found:
P/O'S, EQL'S, & ASBESTOS RECORDS FOR CANOGA PARK HIGH SCHOOL, 6850 TOPANGA CANYON BLVD, CANOGA PARK, CA, ID #72693.

The following records were not found:
NOV'S, & COMPLAINTS FOR CANOGA PARK HIGH SCHOOL, 6850 TOPANGA CANYON BLVD, CANOGA PARK, CA, ID #72693.

YOUR REQUESTED RECORDS WERE PROVIDED ELECTRONICALLY ON 12/13/2018

If you have any questions, please do not hesitate to contact me, Tuesday through Friday, **8:00 a.m**. to **4:30 p.m.**

Sincerely,

LORA TRAPP x2854
For COLLEEN PAINE
Public Records Coordinator

SUPPORTING DOCUMENTS

- *ASTM 1527-05 PHASE I ESA USER QUESTIONNAIRE*
- *PRELIMINARY ENVIRONMENTAL SCREENING OF EXISTING SCHOOL SITE*
- *INVENTORY OF CHEMICALS*
- *USER PROVIDED INFORMATION*

ASTM 1527-05 Phase I ESA User Questionnaire

Person Interviewed:

Interview Date/Method	12/03/2018/ In person
Name and Title	Mr. Carlos Moran – Plant Manager Mr. Ralph Wilkinson – Teacher/ Chemical Safety Coordinator Mr. Eric Longenecker – LAUSD Site Assessment Project Manager
Company Name	Canoga Park High School
Contact Information	818-637-1334
How long have you been associated with the Site?	Around 15 years for Mr. Carlos Moran

1. What is the reason for the Phase I?

Redevelopment or construction work around the Assembly Hall area.

2. What are the current uses of the Property?

High School

3. Are any hazardous material and/or petroleum products used at the Site? If so, what are they used for and where are they stored?

Gasoline for landscape equipment including mowers, trimmers, and others. The storage Unit located in the northern portion of the Site (Building ID 26267) is used as storage of the land scape equipment and the storage unit located at the Owensmouth High School (northeastern portion) is used as storage and dispenser of gasoline.

4. Are you aware of any releases of hazardous materials or petroleum products at the Site?

No

5. Are hazardous wastes generated at the Site? If so, where are they stored? How often and by who are they disposed?

No

6. Before its current use, do you know what the Site was used for?

It was developed as school

7. Have you ever noticed pools of unidentified liquids or staining on the ground at the Site?

No

8. Are you aware of the presence of any wells at the Site?

No active wells. There are abandoned (destroyed wells) in the southwestern corner of the Site.

9. Are you aware of the existence of the following documents related to the Site?

a) Any previously conducted environmental site assessment or audit reports

No

b) Any environmental permits (solid waste disposal, hazardous waste disposal, wastewater treatment/disposal, NPDES).

No

c) Any registrations or plans for USTs, ASTs, wastewater clarifiers/treatment systems or septic systems

No

d) Any spill control and countermeasure plans

No

e) Any geologic, geotechnical or hydrogeologic reports

No

f) Any notices or correspondence from any government agencies regarding past or current violations of environmental regulations

No

g) Any environmental liens against the Site

No

h) Any deed or land use restrictions or limitations for the Site related to environmental conditions

No

i) Any environmental liens against the Site

No

j) Any risk assessment reports

No

10. Do you know of spills or other chemical releases that have taken place at the property?

No

11. Are you aware of any current or previous environmental issues/problems on the neighboring properties?

No

12. Is there known asbestos onsite? Was asbestos survey conducted and do you know the results/ or do you have documents?

Yes, Asbestos documents are stored in the administration office.

13. Are there know radon problems in the area? Has there been any radon sampling done?

14. How many transformers are located within the property?

No.	Condition (stain?)	Location
1	No stain	East of the former boiler room
2	No stain	East of the Clrm Bldg # 3
3	No stain	Northeast portion of the Site – Ownsmouth High School
4	No stain	Southwest of the athletic track field

15. Any above former or current UST or ASTs? Describes size and content.

None.

Preliminary Environmental Screening of Existing School Site

School Name: Canoga Park High School			
School Address: 6850 Topanga Canyon Blvd., Canoga Park, CA 91303			
Selection Criteria	**Yes**	**No**	**Comments**
Powerlines/Electromagnetic Fields [CCR, Title 5, 14010(c)]			
Are any 50-133 kV powerlines/electromagnetic fields within 100 feet of the Site?		X	
Are any 220-230 kV powerlines/electromagnetic fields within 150 feet of the Site?		X	
Are any 500-550 kV powerlines/electromagnetic fields within 350 feet of the Site?		X	
Railroads [CCR, Title 5, 14010(d)]			
Are any railroads within 1,500 feet of the Site?		X	
Traffic Noise [CCR, Title 5, 14010(e)]			
Is the Site adjacent to roads or freeways that could adversely affect the educational program?		X	
Faults [CCR, Title 5, 14010(f)]			
Do any active earthquake faults or fault traces run through the Site?		X	
Flood or Inundation Area [CCR, Title 5, 14010(g)]			
Is the Site subject to flooding or dam inundation?		X	
Pipelines and Above Ground Tanks [CCR, Title 5, 14010(h)]			
Are any above-ground water or fuel storage tanks near the Site?		X	
Are any above-ground or underground pipelines located within 1,500 feet of the Site?		X	
Liquefaction and Landslides [CCR, Title 5, 14010(i)]			
Is the Site subject to liquefaction or landslides?	X		Based on the Seismic Hazard Zones Map (1998), the Site falls within areas where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacement.
Traffic and Pedestrian Safety [CCR, Title 5, 14010(l)]			
Is the Site adjacent to any major arterial street(s)?		X	

Preliminary Environmental Screening of Existing School Site

School Name: Canoga Park High School

School Address: 6850 Topanga Canyon Blvd., Canoga Park, CA 91303

Selection Criteria	Yes	No	Comments
Compatible Zoning [CCR, Title 5, 14010(m)]			
Is the zoning surrounding the Site compatible?		X	
Light, Wind, Air Pollution [CCR, Title 5, 14010(q)]			
Is the Site subject to light, wind or air pollution?		X	
Easements [CCR, Title 5, 14010(r)]			
Area any easements on or adjacent to the Site which may restrict access or building placement?		X	
Border Zone Property [CCR, Title 5, 14010(t)]			
Is the Site within 2,000 feet of any significant disposal of hazardous waste site?		X	
Cellular Phone Towers [LAUSD Board Resolution]			
Are any cellular phone towers on or adjacent to the Site?		X	
Air Pollution [LAUSD Board Resolution]			
Are any major transportation corridors (freeway, major rail line) within 500 feet of the Site?		X	
Are any major stationary sources of emissions within 500 feet of the Site?		X	
Methane Zone			
Is the Site a known methane (or buffer) zone or oil field?		X	
Oil Wells			
Are any oil wells located on the Site?		X	
Airports			
Are any airports within two nautical miles of the Site?		X

EXECUTIVE SUMMARY

This *Preliminary Environmental Assessment – Equivalent Report* (Report) documents the results of soil sampling and laboratory analyses for the proposed Major Modernization project at Canoga Park Senior High School (Site) located at 6850 Topanga Canyon Boulevard in Canoga Park, California (**Figure 1**). This report has been prepared for the Los Angeles Unified School District (LAUSD) to present a summary of the sampling and analyses activities conducted for the proposed project area on the school campus.

The scope of work completed for this project was based on the Recognized Environmental Conditions (RECs) presented in the *Phase I Environmental Site Assessment Report* (Phase I ESA) [Eco & Associates, Inc. 2019], and to determine applicability of South Coast Air Quality Management District (SCAQMD) Rule 1466 at locations within the boundary of the proposed Major Modernization. The work was also conducted in general accordance with applicable regulatory guidance, including the *Preliminary Endangerment Assessment Guidance Manual* prepared by the California Department of Toxic Substances Control (DTSC), and direction from LAUSD.

A total of 52 initial boring locations were sampled at depths of 0 to 0.5-, 1.5 to 2.0-, and 2.5 to 3.0-ft bgs. The samples at 2.0- and 3.0-ft bgs were placed on hold with the analytical laboratory pending the results of the 0.5-ft sample. After review of the initial data generated from the 0.5-foot samples where concentrations exceeded preliminary screening levels, 24 samples from deeper depths were analyzed for constituents that exceeded their respective action levels. After LAUSD and Parsons' review of the soil analytical data from the initial 52 borings, 68 step-out borings were also completed.

Analytical results for the soil samples were compared with risk-based screening levels to determine if the analytes are present at concentrations that may represent a potential health risk. The screening levels are referred to here and after as preliminary screening levels (PSLs). For direct exposures to soils, the DTSC's (2015) *Preliminary Endangerment Assessment Guidance Manual* states that risk-based screening levels used should be "the USEPA Regional Screening Level (RSL) for residential land use, modified as necessary by the DTSC in HHRA Note 3." Thus, the screening levels used here are, in general, the USEPA RSLs (2023) unless DTSC (2022) has published a screening value of its own, termed the DTSC-SLs. PSLs for organochlorine pesticides (OCPs), polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), and volatile organic compounds (VOCs) were determined in this way. Constituents with special considerations are discussed in more detail in Section 4.2.

The following analytes were sampled for but were either not detected above their laboratory reporting limit, or if it detected, the result was below their respective PSL:

- Cadmium, nickel and mercury
- PAHs
- TPH
- VOCs
- Asbestos

Several analytes were detected above their respective PSLs, including hexavalent chromium, OCPs, and PCBs. PROUCL was used to support that those individual detections above PSLs for hexavalent chromium, OCPs, and PCBs can be left in place when considered from a site-wide perspective.

PROUCL was calculated for soil samples with an arsenic result less than 30 milligrams per kilogram (mg/kg). PROUCL was used to support that arsenic detections below 30 mg/kg can be left in place when considered from a site-wide perspective. Step-out sampling was conducted at boring locations with an arsenic result exceeding 30 mg/kg to delineate impacts that will be recommended for removal.

PROUCL was calculated for soil samples collected that did not exceed the Soluble Threshold Limit Concentration (STLC). PROUCL was used to support that lead detections that do not exceed the STLC threshold of 5.0/mg/L can be left in place when considered from a site-wide perspective. Step-out sampling was conducted at 4 sample locations with lead results that exceeded 5.0 mg/L for STLC to delineate impacts that will be recommended for removal.

An estimated 273 cubic yards (CY) of soil at 12 locations are impacted by arsenic and/or lead based on the results of the field investigation. Approximately 174 CY can be managed as non-hazardous waste (above PSL, but non-hazardous) and approximately 99 CY can be managed as non-Resource Conservation and Recovery Act (RCRA) [hazardous in California] hazardous waste.

Based on the findings in this Report, a *Soil Removal Plan* (SRP) should be developed for the Site to address areas with lead and/or arsenic-impacted shallow soil as identified in this PEA-E.

1.0 INTRODUCTION

This *Preliminary Environmental Assessment – Equivalent Report* (Report) documents the results of soil sampling and laboratory analyses for the proposed Major Modernization project at Canoga Park Senior High School (Site) located at 6850 Topanga Canyon Boulevard in Canoga Park, California (**Figure 1**). This report has been prepared for the Los Angeles Unified School District (LAUSD) to present a summary of the sampling and analyses activities conducted for the proposed project area on the school campus.

The Preliminary Environmental Assessment-Equivalent (PEA-E) was conducted as requested by the LAUSD's Office of Environmental Health and Safety (OEHS) based on their review of the *Preliminary Environmental Assessment – Equivalent Workplan* (Work Plan), dated March 30, 2023 (Parsons, 2023). It was also conducted in general accordance with applicable regulatory guidance, including the *Preliminary Endangerment Assessment Guidance Manual* prepared by the California Department of Toxic Substances Control (DTSC, 2015).

The goal of performing the scope of work described in the Work Plan was to determine if historical or recent activities or materials have adversely impacted the surface soil or shallow soil (0 to 3 feet below ground surface [bgs]), prior to grading and construction for the proposed Site modernization activities.

LAUSD is proposing to remove/improve the following areas at the Site (which are the subject of the Assessment):

- Demolition of Cafeteria Building and Lunch Shelter, 12 classrooms in portables and permanent buildings, Shop Building #1 and 3 J-Buildings.
- Construction of new Food Services/Classroom Building including 12 new classrooms with associated support spaces and covered walkways.
- Construction of new Home Restrooms/Concessions/Maintenance & Operations Building.
- Construction of new Visitors' Restrooms/Concessions Building.
- Exterior painting of all remaining buildings to provide a uniform appearance.
- Associated sitework, utilities, landscaping as required for new construction.
- Interim housing as required.
- Barrier removal to comply with Americans with Disability Act.
- Construction of new synthetic running track, new football field natural turf with irrigation, new long-jump, high-jump & shot put, and new scoreboard. Includes bleachers repairs/accessibility upgrades and miscellaneous site improvements as required.

The scope of work presented in the PEA-E Workplan, based on information provided in LAUSD's request for proposal, was designed to assess each of the areas of removal/improvement. The following subsections discuss the objectives and scope of work for this assessment.

1.1 OBJECTIVES

The objective of the sampling effort was to determine if environmental issues related to impacted soil will need to be mitigated either prior to or during the Site modernization activities described above. A determination will also be made as to whether or not the requirements of South Air Quality Management District (SCAQMD) Rule 1466 apply to soil handling activities.

Figure 2 depicts the initial soil boring locations. Soil samples were analyzed utilizing an off-site fixed laboratory. A brief description of the soil sampling strategy is provided in **Table 1**.

1.1 SCOPE OF WORK

The PEA-E scope of work consisted of the following:

- Preparation and distribution of an English and Spanish Assessment Work Notice (Notice) to parents of the school students, prior to commencing fieldwork. The Notice was also distributed to line-of-sight neighbors, faculty, parents of Canoga Park Senior High School students, properties within 500 feet of the school perimeter and laminated copies were posted at four locations around the perimeter of the school.
- Preparation of a Site-Specific Health and Safety Plan.
- Notification of the planned subsurface investigation to DigAlert. Boring locations were marked in the field using chalk-based paint and geophysical surveys were conducted prior to advancement of soil borings.
- Implementation of the Parsons Workplan (Parsons, 2023) as follows:
    - Completion of 52 initial soil borings (SB-1 through SB-8; SB-11 through SB-18; and SB-20 thru SB-55) to a maximum depth of three (3)-feet (ft) bgs to evaluate potential impacts in shallow soil from arsenic, lead, and organochlorine pesticides (OCPs) in the project area. At each of the boring locations, the 0.5-ft depth soil sample was analyzed and the step-down samples at 2.0-ft and 3.0-ft were placed on hold at the analytical laboratory pending review of analytical results from the 0.5-ft sample.
    - Soil in borings located near electrical transformers or switch gears (SB-24, SB-34, and SB-35) were analyzed for polychlorinated biphenyls (PCBs).
    - Soil in borings located near areas where volatile chemicals may have been stored in drums or other containers (SB-2, SB-3, SB-34, and SB-35), were analyzed for total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs).
    - A total of 20% of the shallow soil samples collected at 0.5-ft were analyzed to determine if results would require SCAQMD Rule 1466 monitoring during construction. In addition to arsenic, lead, and OCPs these soil samples were analyzed for cadmium, hexavalent chromium, mercury, nickel, polycyclic aromatic hydrocarbons (PAHs), PCBs, and asbestos.
    - Soil samples were screened using a photoionization detector (PID).
    - Preparation of this PEA-E Report.

2.0 SUMMARY OF SITE BACKGROUND

2.1 SITE HISTORY AND BACKGROUND

Canoga Park Senior High School had approximately 1,500 students in the grades 9-12, five (5) administrators, seventy-eight (78) teachers, and thirty-nine (39) support staff in the 2021-2022 school year. The campus initially opened in 1915 as Owensmouth High School and currently consists of 19 permanent buildings, 16 portable buildings, an athletic field, paved driveways and parking areas, and landscaping. The school campus is approximately 21.4 acres within Los Angeles County Assessor Parcel Number 2138-001-900 and located at 6850 Topanga Canyon Boulevard, Canoga Park, CA 91303.

The Site was undeveloped and vacant up to approximately 1914. In 1915, the Site was developed as Owensmouth High School with a single relatively large building (main classroom and administration building) located on the northwestern part of the property. Since 1931, the school has been referred to as Canoga Park High School (Eco, 2019).

In 1928, the school was comprised of a relatively large main building (main classroom and administration building) and three smaller buildings south of the main building located in the Site's northwestern portion including the Girls Gym building. The eastern half of the Site was primarily open land, with an agricultural grove in the southeast portion, and Bell Creek and Calabasas Creek, both creeks flowing toward the east. Between 1928 and 1938, two additional large school buildings, facing Topanga Canyon Boulevard and used as administration and for classrooms, were added in the southwest portion of the Site. Within that same period, the oval athletic track was moved to its current location in the central portion of the east half of the Site.

In 1939, the assembly hall was added on the Site's southwestern portion. Between 1952 and 1959, the original large school building and another small building, located in the northwest portion of the Site, were removed and converted to an athletic field. Between 1954 and 1958, the Cafeteria, the Boys Physical Education building, Class Room Building (Clrm Bldg) #2, Shop #2, and four storage buildings located south of the oval athletic track field were added. In 1960 and 1968, Clrm Bldg #3, the Music Building, Storage Unit Building #014DOP, and Clrm Bldg #4 were added.

During the period between 1974 and 1979, a major remodeling occurred that included removal of the two large main school buildings located on the southwest portion of the Site facing Topanga Canyon Boulevard as well as the cement concrete walks connecting the buildings. These were replaced by two other large buildings referred to as building Unit #1 and building Unit #2.

2.2 PHASE 1 ENVIRONMENTAL SITE ASSESSMENT (2019)

A Phase I Environmental Site Assessment (ESA) was prepared by Eco & Associates, Inc. (ECO) dated February 18, 2019, for the school Site. The Phase I ESA research indicated there were historical, potential, and other recognized environmental conditions (RECs) found in connection with the Site as indicated below:

1) An underground hydraulic lift was located in the southern portion of Shop #2.

2) The Vanowen Plaza Property located at 22017 Vanowen Street is currently being investigated under the oversight of the Los Angeles Regional Water Quality Control Board. Various dry cleaners occupied a unit in a building on this property from 1992 to 2009. Subsurface investigations showed that the soil, soil vapor, and groundwater are contaminated with perchloroethylene (PCE), trichloroethene (TCE) and other VOCs as a result of release(s) from the dry-cleaning operations. This case was still open as of July 2023.

Other RECS were also identified by ECO judged to have a relatively low probability of resulting in significant impact to the Site.

As a result of the primary and secondary RECs, ECO made the following recommendations:

Lead-Based Paint. Prior to disturbing soil at the Site, it is recommended that representative soil samples be collected within the associated area(s) and analyzed for lead. The results of the investigation should be used to determine if the lead concentrations in soil in these areas are a potential threat to human health.

Arsenic. Prior to disturbing any asphalt at the Site, it is recommended that representative soil samples be collected beneath the asphalt within the associated area(s) and analyzed for arsenic. The results of the investigation should be used to determine if the arsenic concentrations in soil in these areas are a potential threat to human health.

OCPs. Prior to their removal, it is recommended that representative soil samples be collected around wooden structures and analyzed for OCPs. The results of the investigation should be used to determine if the OCP concentrations in soil in these areas are a potential threat to human health.

Transformers. If future construction activities encroach into the immediate vicinity of pad-mounted transformers, it is recommended that the adjoining soil be assessed for the possible presence of PCBs prior to disturbing the soil around the transformers. The results of the investigation should be used to determine if there are detectable concentrations of PCBs in this soil and if the detectable PCBs are a potential threat to human health.

Hydrocarbons. Due to the previous use of the southern part of building Shop #2 as an auto shop, the presence of underground lifts, and an associated clarifier, this area was considered a potential REC. However, the extent of a potential leak is expected to be limited in the soils below the building due to the heavy nature of the hydraulic fluid. Assessment of the soils below the building and clarifier for the possible presence of hydrocarbons is recommended if future construction activity is planned that will disturb soil beneath the building.

Radon. Due to the high potential for indoor-radon levels above 4.0 microcuries per liter at the Site and its surroundings, it is recommended that radon mitigation measures be included in any future buildings or additions.

2.3 PEA-E WORKPLAN TECHNICAL MEMORANDUM (2023)

The PEA-E Technical Workplan Memorandum was prepared by Parsons in 2023 to characterize potential environmental impacts present in Site soils in the proposed project areas. Based on the former activities on the property, and age of the buildings, it is possible that lead based paint (lead), arsenic, OCPs, PCBs from transformers, TPH and VOCs from auto shop operations at the Site may be present in shallow soil (Parsons, 2023). The Workplan was approved by LAUSD and is presented in **Appendix A**.

3.0 ENVIRONMENTAL SETTING

The information presented in this section provide environmental setting information, including the topographic, geologic, and hydrogeologic characteristics of the subject property and surrounding area.

3.1 REGIONAL PHYSIOGRAPHIC SETTING

3.1.1 Location and Topographic Setting

The San Fernando Valley is a roughly triangular feature within the Transverse Ranges province, a region noted for its intense and relatively young deformation (Dibblee, et al., 1991). The Transverse Ranges province is a region of north-south shortening that extends east-west across the northwest-trending San Andreas fault system. Its topographic features and geologic structure trend east-west and are most strikingly developed in the Ventura Basin. The San Fernando Valley is south of the east end of the present Ventura Basin. The Santa Monica Mountains, part of the Transverse Ranges, form the southern margin of the San Fernando Valley. The northern margin of the San Fernando Valley is marked by a steep topographic front associated with the north-dipping Santa Susana thrust and Sierra Madre faults, part of a discontinuous, predominantly north-dipping thrust belt extending from the Santa Barbara Channel on the west to the San Bernardino Valley on the east (V.E. Langenheim, 2011).

The Site is approximately 27.4 acres. The Site elevation is 796 feet above sea level, and is bound by Hart Street to the north, Vanowen Street to the south, Jordan Avenue on the east and Topanga Canyon Boulevard to the west (ECO, 2019).

3.1.2 Nearest Surface Water Body

Two concrete lined channels cross the Site: Bell Creek that enters the Site at the northwest corner and Calabasas Creek that enters the Site at the central portion of the southern boundary. The confluence of both water bodies form the beginning of the Los Angeles River at the central portion of the eastern boundary of the Site (ECO, 2019). The Los Angeles River flows south toward the Pacific Ocean.

3.2 REGIONAL GEOLOGY

The Site is located in the western portion of the San Fernando Valley within the San Fernando Hydrologic Subarea. The western portion of this subarea contains sediments derived from the surrounding hills. The source material has high clay content, averaging 75 percent clay, 5 percent sand, and 20 percent gravel. The Valley fill extends to a depth of approximately 750 ft bgs. Underlying the Valley fill is the non-water bearing Modelo (Puente) Formation, which consists of marine arkose conglomerates, sandstones, and siliceous and diatomaceous shale (ECO, 2019).

3.2.1 Nearest Known Earthquake Faults

The nearest fault to the school site is the Chatsworth Fault, located approximately 2.88 miles northwest of the Site. This is a north-dipping reverse fault, approximately 20 kilometers in length, trending from the southwest to the northeast. The most recent surface rupture was in the Late Quaternary with an unknown rupture frequency and slip rate. There are no other known fault zones within 5 miles of the Site (ECO, 2019).

3.2.2 Potential for Liquefaction and Landslides

According to the California Geological Survey *Earthquake Zones of Required Investigation* Map containing earthquake fault and seismic hazard zones, the school property falls within "areas where historical occurrence of liquefaction, or local geological, geotechnical and groundwater conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required." The school property does not fall within an identified earthquake-induced landslide zone (ECO, 2019).

According to the City of Los Angeles Planning Department's ZIMAS interactive mapping tool (http://zimas.lacity.org) accessed on June 28, 2023, the school property is not within a potential landslide area, Preliminary Fault Rupture Study Area, or an Alquist-Priolo Earthquake Fault Zone. This is based on soil type and historical depth to groundwater, not site-specific investigation.

3.2.3 Potential for Flooding

The school property is located in an "area of minimal flood hazard" (FEMA Flood Map, 2019) so the potential for flooding is considered low. In addition, the Site is well drained and is bound by two lined creeks, the Bell and Calabasas. Any flood water would be directed to the creeks and channeled east of the Site into the Los Angeles River (ECO, 2019).

3.2.4 Radon

The California Geologic Survey's Radon Potential Zone Map (prepared for the California Department of Health Services, Environmental Health Division, for Southern Los Angeles County dated January 2005) indicates the school property is within an area estimated to have a high potential for indoor radon levels above 4.0 Picocuries per liter (P/L) (ECO, 2019). Radon information for Los Angeles County indicates that the United States Environmental Protection Agency (USEPA) has categorized Los Angeles County as Zone 2 for radon; however, this school Site lies at the upper end of the Zone 2 scale (2 to 4 P/L). The USEPA radon recommended action level is 4 P/L.

3.2.5 Methane

According to the City of Los Angeles Planning Department's ZIMAS interactive mapping tool (http://zimas.lacity.org) accessed on June 28, 2023, the school property is not identified as or within a Methane Hazard Site.

3.2.6 Oil Fields and Wells

No known oil wells are located on-Site or adjacent to the school property per State of California Department of Conservation - Geologic Energy Management Division (CalGEM) Online Mapping

System (https://maps.conservation.ca.gov/doggr/wellfinder/#close). A review of the CalGEM oil well tracking maps (accessed June 28, 2023) did not identify any oil wells or natural gas fields located on the school property. The closest oil well is located more than one mile northwest of the school property, within the (former, now abandoned) Mission Oil Field.

Additionally, according to the Oil Wells, Oil Fields and Landfill Sites Map produced by the City of Los Angeles, Bureau of Engineering (2007), the school property is not located within or adjacent to a boundary of a productive oil field.

3.3 REGIONAL HYDROGEOLOGY

Based on records search conducted on the Los Angeles County, Department of Public works well database (http:dpw.lacounty.gov/general/wells/#), the groundwater beneath the Site is located at a depth range of between 763 and 786 feet above sea level. This range is based on data obtained from two wells located approximately 0.5 miles northeast and 0.5 miles west of the Site, respectively. Depth to groundwater has ranged historically from 15 to 20 feet bgs (ECO, 2019).

3.3.1 Groundwater Flow Direction

The groundwater flow direction beneath the Site is expected to flow toward the east, similar to the topographic gradient.

3.3.2 Groundwater Wells Within a 1-Mile Radius of the School Property

The nearest groundwater well identified in the County of Los Angeles Department of Public Works production well location database (accessed June 28, 2023) is active well #3580C, located near the intersection of Hart Street and Nita Avenue, approximately 0.45 miles west of the school property. The most recent depth to water measurement was 19.10 feet below grade (784.80 feet above sea level), on October 24, 2022. The next nearest well is active well #4708, which had a reported depth to water measurement of 31.44 feet below grade (760.16 feet above sea level), measured on April 13, 2021. This well is located approximately 0.6 miles northeast of the school property.

4.0 SAMPLING ACTIVITIES AND RESULTS

4.1 SAMPLING ACTIVITIES

The following subsections summarize the field activities conducted during the soil sampling and analyses. A total of 52 initial boring locations were sampled at depths of 0 to 0.5-, 1.5 to 2.0-, and 2.5 to 3.0-ft bgs. The samples at 2.0- and 3.0-ft bgs were placed on hold with the analytical laboratory pending the results of the 0.5-ft sample. After review of the initial data generated from the 0.5-foot samples where concentrations exceeded preliminary screening levels, 24 samples from deeper depths were analyzed for constituents that exceeded their respective action levels. After LAUSD and Parsons' review of the soil analytical data from the initial 52 borings, 68 step-out borings were also completed. The initial boring locations are depicted on **Figures 2a through 2c** and step out borings are depicted on **Figures 3a -through 3g**.

4.1.1 NOTIFICATIONS AND PERMITTING

Prior to intrusive fieldwork, pre-field noticed were prepared and distributed. Copies of the notices are included in **Appendix B.** Additional information on these notices can be found in section 9.0 of this PEA-E.

No regulatory permits were required to perform the work.

4.1.2 UTILITY CLEARANCE

Prior to the initial and step-out boring activities, the proposed boring locations were marked with white paint. Underground Service Alert of Southern California (DigAlert) was notified of the proposed work on March 28, June 6, and July 12, 2023, prior to initiating each sampling event. DigAlert contacted all utility owners of record within the Site vicinity and notified them of the planned subsurface investigation. All utility owners of record, or their designated agents, clearly marked the position of their utilities on the ground surface, the public right-of-way sidewalks, and street adjacent to the area designated for investigation, up to the school property line. LAUSD provided several available plans depicting locations of buildings, subsurface structures and utilities which were also reviewed prior to marking the boring locations.

The proposed borings were surveyed by Subsurface Surveys, Inc., a private utility locator on March 31, April 3, June 12, and July 14, 2023, for the presence of underground utilities using geophysical methods (including ground-penetrating radar, electromagnetic utility locating, and deep search metal detector). Copies of the utility locating reports are provided in **Appendix C**. Based on the presence of several identified subsurface utilities, several of the proposed soil boring locations were relocated several feet to avoid utilities during hand augering. Relocation of borings was done in consultation with LAUSD.

4.1.3 SOIL LOGGING AND SAMPLE COLLECTION

Soil samples from the initial 52 borings were collected April 4 - 6, 2023. Step-out soil samples were collected June 12 – 15 and July 17, 2023. Borings with an asphalt or concrete surface were cored before samples were collected. Borings in asphalt where asbestos may be present were cored by certified asbestos personnel in accordance with a workplan provided in **Appendix D** that was reviewed and approved by Panacea Environmental, a certified asbestos consulting firm. Soil samples were collected using a hand auger at each location. Air sampling was performed by Panacea at areas where asphalt coring was needed. The air sampling report generated by Panacea is provided in **Appendix E**. Each soil sample was collected in a manner that minimized disturbance and allowed the sample to retain as much of the original structure as possible. Soil samples were collected in new laboratory-provided glass jars, which were then placed in individual sealable plastic bags. Each sample jar was labeled individually, stored in an ice chest containing ice, and delivered to a certified laboratory with a chain-of-custody form. Soil characteristics were logged on field boring logs (**Appendix F**). Per LAUSD instruction, borings were backfilled with leftover soil cuttings and clean sand, and the top approximately four (4) inches was set to the existing surface with like materials (i.e., asphalt, concrete or soil). Per LAUSD direction, after hand augering and sampling at each boring location, the asphalt core was placed back in the top of the borehole and capped with concrete to match existing grade.

Field screening was conducted at all soil borings sampled during this assessment using a PID. The PID was calibrated with 100 parts per million isobutylene gas at the beginning of each fieldwork day. Soil was placed into a resealable bag and allowed to sit exposed to the sun for approximately five (5) minutes, at which time the VOC concentration in the headspace was measured by inserting the PID probe inside the bag. The PID readings were recorded on the boring logs prepared by the field geologist during soil sampling activities.

4.1.4 Equipment Decontamination and Investigation-Derived Waste

Down-hole equipment used during soil sampling activities was decontaminated prior to use at each sampling point to reduce the potential for cross-contamination. Between boreholes, the head of the hand auger was decontaminated to minimize the potential for cross-contamination between samples.

Used personal protective equipment and disposable equipment was double-bagged and placed in the on-site dumpster. These wastes are not considered hazardous and were sent to a municipal landfill.

One (1) 55-gallon containing approximately 25 gallons of wash water from coring, was generated at areas where potential asbestos containing asphalt was located. The wash water drum was labeled and temporarily stored onsite pending disposal profiling. The drum was removed by Belshire Environmental Services, Inc. (BESI) on April 28, 2023. The investigative derived waste was disposed of at World Oil Recycling in Compton, California. Drum disposal documentation is provided in **Appendix G.**

4.2 PRELIMINARY SCREENING LEVELS (PSLS)

Analytical results for the soil samples were compared with risk-based screening levels to determine if the analytes are present at concentrations that may represent a potential health risk. The screening levels are referred to here and after as PSLs. For direct exposures to soils, the DTSC's (2015) *Preliminary Endangerment Assessment Guidance Manual* states that risk-based screening levels used should be "the USEPA Regional Screening Level (RSL) for residential land use, modified as necessary by the DTSC in HHRA Note 3." Thus, the screening levels used here are, in general, the USEPA RSLs (2023) unless DTSC (2022) has published a screening value of its own, termed the DTSC-SLs. PSLs for OCPs, PCBs, PAHs, and VOCs were determined in this way. Chemicals with special considerations are discussed in more detail below.

Arsenic: The residential risk-based screening levels from USEPA (2023) and DTSC (2022) of 0.68 and 0.11 milligrams per kilogram (mg/kg), respectively, are well below background concentrations. DTSC (2020) conducted a statistical evaluation of background data for arsenic in soils from Los Angeles, Orange, Riverside, San Bernardino, and San Diego Counties to derive an upper bound background threshold value for arsenic. Based on an evaluation of 1,086 data points, the DTSC (2020) derived a background threshold value for arsenic of 12 mg/kg, which is used here as the arsenic screening level.

Lead: Adverse health effects associated with exposure to lead have been correlated with concentrations of lead in whole blood. Although USEPA uses 10 micrograms per deciliter (µg/dl) as the threshold level of concern, California (OEHHA 2007) uses 1 µg/dl. A screening level of 80 mg/kg is protective of a 90th percentile estimate of 1 µg/dl blood lead concentration in children was calculated by Cal EPA (OEHHA 2009), which is used by DTSC (2022). This standard represents the concentration of lead in soil that will result in a 90th percentile estimate of a 1 µg/dl increase in blood lead in the most sensitive receptor (i.e., child or fetus). DTSC (2022) states that individual samples may exceed 80 mg/kg, as long as the 95% UCL is below 80 mg/kg and hot spots are not present.

Petroleum hydrocarbons: Neither DTSC (2022) nor USEPA (2023) provide risk-based screening levels for petroleum hydrocarbons as measured by USEPA Method 8015. Instead, DTSC (2015) recommends that the risk-based screening levels derived by the San Francisco Regional Board (2019) for direct contact be used. These values equate to 430 mg/kg for TPH as gasoline, 260 mg/kg for TPH as diesel, and 12,000 mg/kg for TPH as motor oil.

4.3 SOIL SAMPLING RESULTS

The soil samples were analyzed by American Environmental Testing Laboratory (AETL) in Burbank, California. Copies of the analytical laboratory reports are provided in **Appendix H**.

4.3.1 METALS

Shallow soil samples (0.5-ft bgs) at the 52 initial boring locations (SB-1 through SB-8; SB-11 through SB-18; and SB-20 thru SB-55) along with five (5) duplicates were collected and analyzed for lead and arsenic, using Environmental Protection Agency (EPA) Method 6010B for lead and EPA Method 6020 for arsenic. A total of 20% of the 0.5-ft samples were analyzed for cadmium, hexavalent chromium, nickel and mercury to determine if results would trigger SCAQMD Rule 1466 monitoring during construction. The results of the analyses for the metals tested are presented in **Table 3** and copies of the analytical laboratory reports are provided in **Appendix H**.

4.3.1.1 Arsenic

Detected arsenic concentrations ranged from 1.8J mg/kg (SB-46-D0.5) to 200 mg/kg (SB-34-D0.5) at 0.5-ft bgs in the initial sample locations. Based on a review of the sample results at 0.5-ft bgs there were 21 PSL exceedances for arsenic. To bound the vertical extent of arsenic, step-down samples at 2.0-ft bgs were analyzed for arsenic and 3.0-ft bgs if there was an exceedance at 2.0-ft bgs. The arsenic concentrations at 2.0-ft bgs ranged from 1.9 mg/kg (SB-16-D2.0) to 110 mg/kg (SB-34-D2.0) in the vertical step-down samples. There were PSL exceedances at nine of the twenty-one 2-ft locations (SB-01, SB-02, SB-03, SB-20, SB-34, SB-35, SB-38, SB-44 and SB-47) which required analysis of the 3.0-ft bgs samples. The arsenic concentrations at 3.0-ft bgs ranged from 4.5 mg/kg (SB-20-D3.0) to 47 mg/kg (SB-44-D3.0). The samples result at SB-44-D3.0 (47 mg/kg) exceeded the PSL for arsenic.

The site-wide 95% upper confidence limit of the mean (UCL) for arsenic was calculated using USEPA's ProUCL software (PROUCL)(USEPA, 2022) for soil samples collected by Parsons with a result less than 30 mg/kg. The UCLs calculated by PROUCL are provided in **Appendix I**. The recommended UCL for arsenic was 11.9 mg/kg. Step-out sampling was conducted at 9 initial boring locations with arsenic results that exceeded 30 mg/kg to delineate impacts that will be recommended for removal.

A total of 55 step-out samples and 9 duplicate samples were collected at 0.5-ft bgs to delineate arsenic at the 9 initial locations with an arsenic exceedance greater than 30 mg/kg. Detected arsenic concentrations ranged from 3.5 mg/kg (SB-7-S20-D0.5) to 630 mg/kg (SB-51-SW10-D0.5). A total of 46 step-out samples exceeded the PSL for arsenic at 0.5-ft bgs. A total of 45 step-down samples were analyzed at the step-out locations. Detected arsenic concentrations ranged from 3.5 mg/kg (SB-26-NW5-D2.0) to 350 mg/kg (SB-51-SW10-D2.0) in the step-down samples. The maximum depth that soil samples were collected and analyzed for arsenic was 3.0-ft bgs. **Table 2** presents the step-out samples collected in each direction from the initial sample, distance from the initial sample location, maximum depth of a step-out sample exceedance in each direction from the initial sample location, and the step-out restrictions (if any) at each location. **Figures 3a – 3g** show the step-out sampling locations for arsenic.

California Code of Regulations, Title 22, Chapter 11, Article 3, uses the Soluble Threshold Limit Concentration (STLC) to determine if various metals are California regulated hazardous waste.

The arsenic concentrations at multiple boring locations exceeded 50 mg/kg. These samples were analyzed for soluble arsenic and compared to the STLC threshold of 5 milligrams per liter (mg/L). The STLC limit was exceeded in the 0.5-ft samples at SB-5-20, SB-7-W10, SB-26-SW10, SB-26-E10, SB-26-SE10, SB-26-E25, SB-34-N10, SB-34-S10, SB-38-S10, SB-38-W5, SB-38-N10, SB-51-SW10, and SB-51-W5. The STLC result was exceeded in the 2.0-ft samples at SB-34, SB-51-W5, and SB-51-SW10. The STLC result was exceeded in the 3.0-ft sample at SB-51-SW10. The Resource Conservation and Recovery Act (RCRA) uses the Toxicity Characteristic Leaching Procedure (TCLP) analysis to determine if various metals are hazardous at a federal level. TCLP analyses were performed at all locations in which the STLC was exceeded. There were no exceedances of the TCLP for arsenic. Therefore, the soil associated with the STLC exceedance from samples SB-5-20, SB-7-W10, SB-26-SW10, SB-26-E10, SB-26-SE10, SB-26-E25, SB-34-N10, SB-34-S10, SB-38-S10, SB-38-W5, SB-38-N10, SB-51-SW10, and SB-51-W5 are non-RCRA hazardous.

4.3.1.2 Lead

Detected lead concentrations ranged from 0.625J[1] mg/kg (SB-46-D0.5) to 821DIL[2] mg/kg (SB-39-D0.5). The lead concentration at six shallow soil sample locations (including one duplicate) exceeded the PSL. To bound the vertical extent of lead, step-down samples at 2.0-ft bgs were analyzed for lead. The lead concentrations in all vertical step-down samples were below the PSL.

The site-wide 95% UCL for lead was calculated using PROUCL for soil samples collected by Parsons that did not exceed the STLC. The UCLs calculated by PROUCL are provided in **Appendix I**. The recommended UCL for lead was 18.75 mg/kg; well below the PSL of 80 mg/kg. Step-out sampling was conducted at 4 sample locations with lead results that exceeded 5.0 mg/L for STLC to delineate impacts that will be recommended for removal.

A total of 17 step-out samples and 5 duplicate samples were collected at 0.5-ft bgs to delineate arsenic at the 4 initial locations with a lead STLC exceedance greater than 5.0 mg/L. Detected lead concentrations ranged from 13.1 mg/kg (SB-39E-D0.5) to 252 mg/kg (SB-3-SE4-D0.5) at 0.5-ft bgs. A total of 7 step-out samples exceeded the PSL for lead. A total of 8 step-down samples were analyzed at the step-out locations. Detected lead concentrations ranged from 3.58 mg/kg (SB-SE15-D2.0) to 7.18 mg/kg (SB-3-SW5-D2.0). The maximum depth that soil samples were collected and analyzed for lead was 2.0-ft bgs. **Table 2** presents the step-out samples collected in each direction from the initial sample, distance from the initial sample location, maximum depth of a step-out sample exceedance in each direction from the initial sample location, and the step-out restrictions (if any) at each location. **Figures 3b, Figure 3d and Figure 3g** show the step-out sampling locations for lead.

The lead concentrations at multiple boring locations exceeded 50 mg/kg. These samples were analyzed for soluble lead to determine their STLC for waste characterization purposes and

[1] J indicates Analyte was detected. However, the analyte concentration is an estimated value.
[2] DIL indicates Result for the compound was reported from diluted analysis.

compared to the STLC threshold of 5 mg/L. The STLC result was exceeded in ten locations (SB-1, SB-1-SW5, SB-3, SB-3-SW5, SB-3-SE5, SB-3-S10, SB-28, SB-28-E10, SB-39, and SB-39-N5). Due to these exceedances, TCLP analyses were performed. There were no exceedances of the TCLP for lead. Therefore, the soil associated with STLC exceedances from locations SB-1, SB-1-SW5, SB-3, SB-3-SW5, SB-3-SE5, SB-3-S10, SB-28, SB-28-E10, SB-39, and SB-39-N5 are non-RCRA hazardous.

4.3.1.3 Hexavalent Chromium

A total of 17 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for hexavalent chromium by EPA Method 7199. Detected hexavalent chromium concentrations ranged from non-detect (multiple boring locations) to 0.53 mg/kg (SB-22-D0.5). The concentration at SB-22-D0.5 exceeded the PSL (0.3 mg/kg). To bound the vertical extent of hexavalent chromium, the step-down sample at 2.0-ft bgs was analyzed for hexavalent chromium. The hexavalent chromium concentration in the vertical step-down sample was below the PSL.

To bound the lateral extent of hexavalent chromium soil collected at 0.5 ft bgs from nearby borings (SB-21, SB-23, SB-24, and SB-25) was analyzed for hexavalent chromium. All concentrations were non-detect except for SB-21-D0.5 (0.58). The concentration at SB-21-D05 exceeded the PSL.

The site-wide 95% UCL for hexavalent chromium was calculated using PROUCL. The UCLs calculated by PROUCL are provided in **Appendix I**. The recommended UCL for hexavalent chromium was 0.285 mg/kg; below the PSL of 0.3 mg/kg.

4.3.1.4 Cadmium

A total of 17 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for cadmium by EPA Method 6010B. Detected cadmium concentrations ranged from non-detect (multiple boring locations) to 1.81J mg/kg (SB-53-D0.5). All sample results were below the PSL for cadmium (7.1 mg/kg).

4.3.1.5 Nickel

A total of 17 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for nickel by EPA Method 6010B. Detected nickel concentrations ranged from 12.5 mg/kg (SB-31-D0.5) to 25.5 mg/kg (SB-11-D0.5). All sample results were below the PSL for nickel (820 mg/kg).

4.3.1.6 Mercury

A total 17 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for mercury by EPA Method 7471A. Detected mercury concentrations ranged from non-detect (multiple boring locations) to 0.697 mg/kg (SB-26-D0.5Dup). All sample results were below the PSL for mercury (13 mg/kg).

4.3.2 ORGANOCHLORINE PESTICIDES

Shallow soil samples (0.5-ft bgs) at the 52 initial boring locations (SB-1 through SB-8; SB-11 through SB-18; and SB-20 thru SB-55) along with five (5) duplicates were collected and analyzed for OCPs by EPA Method 8081A. The OCP results are presented in **Table 4** and copies of the analytical laboratory reports are provided in **Appendix H**.

The laboratory results indicate that the only OCPs detected above the method detection limit in soil samples were for the following:

- Alpha-chlordane
- Gamma-chlordane
- Total chlordane
- 4,4'-DDD
- 4,4'-DDE
- 4,4'-DDT
- Dieldrin
- Endrin
- Heptachlor epoxide
- Toxaphene

The dieldrin detection at SB-32-D0.5 of 82.8 micrograms/kilogram (µg/kg) was the only OCP detection above PSLs. To bound the vertical extent of the dieldrin detection at SB-32-D0.5, a step-down sample at 2.0-ft bgs was analyzed for OCPs. The dieldrin concentration in the vertical sample at SB-32 was below the PSL.

The site-wide 95% UCL for dieldrin was calculated using PROUCL. The UCLs calculated by PROUCL are provided in **Appendix I**. The recommended UCL for dieldrin was 1.3 mg/kg; well below the PSL of 34 µg/kg.

4.3.3 PCBS

A total of 20 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for PCBs using EPA Method 8082. The PCB results are presented in **Table 5** and copies of the analytical laboratory reports are provided in **Appendix H**.

PCBs were detected above the method detection limit at only one (1) of the soil sample locations (SB-22-D0.5). The PCB detection (Aroclor-1254) at SB-22-D0.5 (293 ug/kg) was greater than the PCB-1254 PSL of 240 ug/kg. For this reason, the 2.0-ft bgs sample was analyzed and the result was below the PSL.

The site-wide 95% UCL for Aroclor 1254 was calculated using PROUCL. The UCLs calculated by PROUCL are provided in **Appendix I**. The recommended UCL for Aroclor 1254 was 42.46 µg/kg; well below the PSL of 240.

4.3.4 POLYCYCLIC AROMATIC HYDROCARBONS

A total of 17 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for PAHs using EPA Method 8270 SIM. PAHs were not detected above the PSL in any soil samples; therefore, no samples were analyzed from samples collected at 2.0-ft bgs and/or 3.0-ftbgs. The PAHs results are presented in **Table 6** and copies of the analytical laboratory reports are provided in **Appendix H**.

4.3.5 TPH

A total of five (5) shallow soil samples (0.5 ft bgs) including one (1) duplicate sample were collected and analyzed for TPH as gasoline (C4-C12), TPH as Diesel (C13-C22), and TPH as Heavy Hydrocarbons (C23-C40) by EPA Method 8015. TPH as gasoline was detected in two (2) samples (SB-36-D0.5 and SB-3-D0.5 DUP) at concentrations of 0.21 mg/kg and 0.228 mg/kg, respectively. TPH as diesel was detected in one (1) sample (SB-37-D0.5) at a concentration of 27.5 mg/kg. TPH as motor oil was not detected in any of the samples analyzed. None of the detected concentrations of TPH were greater than their respective PSLs. The analytical results are presented in **Table 7** and copies of the analytical laboratory reports are provided in **Appendix H**.

4.3.6 VOCs

A total of five (5) shallow soil samples (0.5 ft bgs) including one (1) duplicate sample were collected and analyzed for VOCs by EPA Method 8260. Three (3) VOCs were detected in the samples analyzed: acetone, benzene and toluene. Acetone was detected only in the samples collected from boring SB-3 (SB-3-D0.5 and SB-3-D0.5 DUP) at concentrations of 151 µg/kg and 132 µg/kg, respectively. Benzene was detected in three (3) samples: SB-2-D0.5 (0.587 J µg/kg); SB-36-D0.5 (0.933 J µg/kg); and SB-37-D0.5 (0.510 J µg/kg). Toluene was detected in all five (5) samples: SB-2-D0.5 (2.04 ug/kg); SB-3-D0.5 (2.73 µg/kg); SB-3-D0.5 DUP (2.50 µg/kg); SB-36-D0.5 (2.20 µg/kg); and SB-37-D0.5 (2.26 ug/kg). None of the detected concentrations of VOCs were greater than their respective PSLs. The analytical results are presented in **Table 8** and copies of the analytical laboratory reports are provided in **Appendix H**.

4.3.7 ACM

A total of 15 shallow soil samples (0.5 ft bgs) plus two duplicate samples were collected and analyzed for ACM by Method EPA 600/r-93-116 & EPA 600/M4-82-020. ACM was not detected in any of the 17 samples analyzed. The analytical results are presented in **Table 9** and copies of the analytical laboratory reports are provided in **Appendix H**.

5.0 DELINEATION OF IMPACTS IN SOIL

The lateral and vertical impacts in soil were attempted to be reached by establishing clean (i.e., < PSL) step-out sample locations or a sample restriction (i.e.: building, utility, fence, etc.) were encountered. **Table 2** identifies step-out distances and restrictions. **Table 10** includes an estimate of the volumes of impacted soil and their waste classifications. **Figures 3a to 3g** illustrate the locations of impacted soil. Below is a discussion on the delineation of impacts at each initial boring location.

5.1 SB-1

At boring SB-1**,** the lead concentration at the initial boring location exceeded the PSL of 80 mg/kg only in the shallow (0.5-ft bgs) sample. The arsenic concentration exceeded the PSL of 12 mg/kg in the 0.5-ft and 2.0-ft bgs samples but did not exceed the PSL in the 3.0-ft bgs sample. The lead and arsenic-impacted soil depth and areas are shown on **Figure 3d**. Step-out borings were conducted either 5 or 10 feet to the northwest, southwest, south or southeast directions of the initial SB-1 boring (existing building is immediately adjacent to the northeast). Four step-out borings were sampled for lead; one of which exceeded the lead PSL of 80 mg/kg in the 0.5-ft bgs samples (none exceeded in the step-out samples collected at 2.0-ft bgs). The step-out samples to the northeast and northwest of the initial location reported lead results that did not exceed the PSL. Seven step-out borings were sampled for arsenic; all of which exceeded the arsenic PSL of 12 mg/kg.

The vertical extent of lead-impacted soil exceedances was defined by conducting step-down sampling at the one initial and one step-out 2.0-ft bgs sample. Vertical impacts do not extend below 2-ft bgs in boring SB-1 initial or step-out location for lead. Vertical extent of arsenic-impacted soil exceedances was defined by conducting step-down sampling at one initial (2-ft and 3-ft bgs), six step-out 2.0-ft bgs, and two step-out 3-ft bgs samples. There are approximately 19 cubic yards (CY) of non-hazardous arsenic-impacted soil, and 7.5 CY of non-RCRA hazardous lead-impacted soil, associated with boring SB-1.

5.2 SB-3

At boring SB-3, the lead concentration at the initial boring location exceeded the PSL of 80 mg/kg only in the shallow (0.5-ft bgs) sample. The lead-impacted soil depth and area are shown on **Figure 3d**. Step-out borings were conducted either 5 or 10 feet to the northwest, southwest, south or southeast directions of the initial SB-3 boring (existing building is immediately adjacent to the northeast). Seven step-out borings were sampled; five of which exceeded the lead PSL in the 0.5-ft bgs samples (none exceeded in the step-out samples collected at 2.0-ft bgs). The step-out samples to the northwest and southwest of the initial location reported lead results that did not exceed the PSL.

The vertical extent of lead-impacted soil exceedances was defined by conducting step-down sampling at the one initial and four step-out 2.0-ft bgs samples. Vertical impacts do not extend below 2-ft bgs in boring SB-3 initial or the four step-out locations. There is approximately 13.6 CY of non-RCRA hazardous lead-impacted soil associated with boring SB-3.

5.3 SB-5

At boring SB-5, the arsenic concentration at the initial boring location exceeded the PSL of 12 mg/kg only in the shallow (0.5-ft bgs) sample. The arsenic-impacted soil depth and area are shown on **Figure 3c**. Step-out borings were conducted either 5, 10 or 15 feet to the northwest, northeast, west or east directions of the initial SB-5 boring (existing building is immediately adjacent to the south). Six step-out borings were sampled; four of which exceeded the arsenic PSL of 12 mg/kg in the 0.5-ft bgs samples (none exceeded in the step-out samples collected at 2.0-ft bgs). The step-out samples to the west and northeast of the initial location reported arsenic results that did not exceed the arsenic PSL.

The vertical extent of arsenic-impacted soil exceedances was defined by conducting step-down sampling at the one initial and four step-out 2.0-ft bgs samples. Vertical impacts do not extend below 2-ft bgs in boring SB-5 initial or 4 step-out locations. There are approximately 14 CY of non-hazardous arsenic-impacted soil, and 2.9 CY of non-RCRA hazardous arsenic-impacted soil, associated with boring SB-5.

5.4 SB-7

At boring **SB-7,** the arsenic concentration at the initial boring location exceeded the PSL of 12 mg/kg only in the shallow (0.5-ft bgs) sample. The arsenic-impacted soil depth and area are shown on **Figure 3c**. Step-out borings were conducted to the north, south and west directions of the initial SB-7 boring (existing building is immediately adjacent to the east). Nine step-out borings were sampled; six of which exceeded the arsenic PSL of 12 mg/kg in the 0.5-ft bgs samples (none exceeded in the step-out samples collected at 2.0-ft bgs). Three of the nine step-out samples (collected along the southern boundary of the SB-7 sample area) reported arsenic results that did not exceed the arsenic PSL.

The vertical extent of arsenic-impacted soil exceedances was defined by conducting step-down sampling at the one initial and nine step-out 2.0-ft bgs samples. Vertical impacts do not extend below 2-ft bgs in boring SB-7 initial or nine step-out locations. There are approximately 30 CY of non-hazardous arsenic-impacted soil, and 8 CY of non-RCRA hazardous arsenic-impacted soil, associated with boring SB-7.

5.5 SB-20

At boring SB-20, the arsenic concentration at the initial boring location exceeded the PSL in the shallow (0.5-ft bgs) and 2.0-ft bgs sample. The arsenic-impacted soil depth and area are shown on **Figure 3e**. Step-out borings were conducted five feet south of the initial SB-5 boring (storage shed

immediately east and utilities immediately north and west of the initial boring). The step-out boring did not exceed the PSL for arsenic.

The vertical extent of arsenic-impacted soil exceedances was defined by conducting step-down sampling at the one initial boring. Vertical impacts do not extend below 3-ft bgs in boring SB-20. There is approximately 10 CY of non-hazardous arsenic-impacted soil associated with boring SB-20.

5.6 SB-26

At boring SB-26**,** arsenic concentrations at the initial boring location exceeded the PSL only in the shallow (0.5-ft bgs) sample. The arsenic-impacted soil depth and area are shown on **Figure 3b**. Step-out borings were conducted in the four cardinal directions of the initial SB-26 boring. Twelve step-out borings were sampled; all of which exceeded the arsenic PSL at 0.5-ft bgs.

The vertical extent of arsenic-impacted soil exceedances was defined by conducting step-down sampling at the one initial and 12 step-out 2.0-ft bgs samples. Vertical impacts do not extend below 3.0-ft bgs in boring SB-26 initial or 12 step-out locations. There are approximately 39 CY of non-hazardous arsenic-impacted soil, and 20 CY of non-RCRA hazardous arsenic-impacted soil, associated with boring SB-26.

5.7 SB-28

At boring SB-28**,** lead concentrations at the initial boring location exceeded the PSL only in the shallow (0.5-ft bgs) sample. The lead-impacted soil depth and area are shown on **Figure 3b**. Step-out borings were conducted 10 feet to the east and west of the initial SB-28 boring (existing building north and utilities west of the initial boring). The lead PSL was not exceeded in the western step-out boring (SB-28-W10), and the eastern step-out boring exceeded the lead PSL in the 0.5-ft bgs sample, but not in the 2.0-ft bgs sample.

The vertical extent of lead-impacted soil was defined by the step-down sample results from the initial and eastern step-out 2.0-ft bgs samples. The lead result from the eastern step-out sample (SB-28-E10) at 2.0-ft bgs did not exceed the lead PSL. There is approximately 5.7 CY of non-RCRA hazardous lead-impacted soil associated with boring SB-28.

5.8 SB-34

At boring SB-34**,** arsenic concentrations at the initial boring location exceeded the PSL in shallow (0.5-ft bgs) soil and the 2.0-ft bgs samples, but was not exceeded in the 3.0-ft bgs sample. The arsenic-impacted soil depths and area are shown on **Figure 3a**. Step-out borings were conducted 10 feet to the north and 10 feet to the south of the initial SB-34 boring (building to west and utilities to east of initial boring). Step-out samples SB-34-N10-D0.5 and -D2.0 exceeded the PSL for arsenic. Step-out samples SB-34-S10-D0.5 exceeded the PSL of for arsenic; the sample at SB-34-S10-D2.0 did not exceed the PSL.

The vertical extent of arsenic-impacted soil exceedances was defined by conducting step-down sampling at all three SB-34 boring locations, with the exception of boring SB-34-S10, which had a reported arsenic PSL exceedance in the 3.0 ft bgs sample (and a deeper sample was not collected to determine vertical extent). Vertical impacts do not extend below 2.0-ft bgs at SB-34 or SB-34-N10. There are approximately 2.1 CY of non-hazardous arsenic-impacted soil, and 8.9 CYs of non-RCRA hazardous arsenic-impacted soil, associated with boring SB-34.

5.9 SB-38

At boring SB-38**,** arsenic concentrations at the initial boring location exceeded the PSL in the shallow (0.5-ft bgs) and 2.0-ft bgs sample. The arsenic-impacted soil depth and area are shown on **Figure 3g**. Step-out borings were conducted to the north, south, west, and southwest directions of the initial SB-38 boring (existing building is immediately adjacent to the east). Six step-out borings were sampled; four of which exceeded the arsenic PSL of 12 mg/kg in the 0.5-ft and 2.0-ft bgs samples.

The vertical extent of arsenic-impacted soil exceedances was defined by conducting step-down sampling at the initial and step-out borings. Vertical impacts do not extend below 3-ft bgs in boring at SB-38. There are approximately 10 CY of non-hazardous arsenic-impacted soil, and 20 cubic yards of non-RCRA hazardous arsenic-impacted soil, associated with boring SB-38.

5.10 SB-39

At boring SB-39**,** lead concentrations at the initial boring location exceeded the PSL only in the shallow (0.5-ft bgs) sample. The lead-impacted soil depth and area are shown on **Figure 3g**. Step-out borings were conducted to the north, south, and east directions of the initial SB-39 boring (existing building is immediately adjacent to the west). Four step-out borings were sampled; one of which exceeded the arsenic PSL.

The vertical extent of lead-impacted soil exceedances was defined by conducting step-down sampling at the initial and step-out boring. Vertical impacts do not extend below 2-ft bgs in boring at SB-39. There are approximately 6.3 CYs of non-RCRA hazardous arsenic-impacted soil associated with boring SB-38.

5.11 SB-44

At boring SB-44**,** arsenic concentrations at the initial boring location exceeded the PSL in the shallow (0.5-ft bgs) sample, 2-ft and 3-ft bgs samples. The arsenic-impacted soil depth and area are shown on **Figure 3e**. Step-out borings were conducted to the north, south, and west directions of the initial SB-44 boring (utility immediately adjacent to the east). Six step-out borings were sampled; five of which exceeded the arsenic PSL. The arsenic PSL was not exceeded in the western step-out boring (SB-44-W5).

The vertical extent of arsenic-impacted soil exceedances was not defined by conducting step-down sampling at the initial and step-out borings. Vertical impacts extend to 3-ft bgs at the initial and

step-out borings. There are approximately 34 CYs of non-hazardous arsenic-impacted soil associated with boring SB-44.

5.12 SB-51

At boring SB-51**,** arsenic concentrations at the initial boring location exceeded the PSL only in the shallow (0.5-ft bgs) sample. The arsenic-impacted soil depth and area are shown on **Figure 3f**. Step-out borings were conducted to the north, east, west and south directions of the initial SB-51 boring. Eight step-out borings were sampled; all of which exceeded the arsenic PSL.

The vertical extent of arsenic-impacted soil exceedances was not completely defined by conducting step-down sampling at the initial and step-out borings. Vertical impacts do not extend below 3-ft bgs at the initial and step-out borings except at boring SW-10. There are approximately 14 CY of non-hazardous arsenic-impacted soil, and 11 cubic yards of non-RCRA hazardous arsenic-impacted soil, associated with boring SB-51 (**Table 10**).

6.0 SURVEY OF IMPACTED AREAS

After soil boring activities were complete, the horizontal and vertical geographic positions of each boring associated with an impacted area was surveyed by Uniplan Engineering Inc.. Standard Survey Monuments found at the centerline intersections of Topanga Canyon Boulevard and Vanowen Street, and Topanga Canyon Boulevard and Hart Street were used for the assumed horizontal basis for this topographic map. The basis of bearings for this topographic map is the centerline of Topanga Canyon Boulevard (formerly Topanga Canyon Avenue) being "North," as shown on Tract No. 9267, MB. 136/98-99. The vertical datum shown hereon references North American Vertical Datum of 1988 (NAVD88) elevations and is based on the City of Los Angeles Benchmark No. 06-06688. The vertical accuracy for the sampling locations is ±0.01 foot. Copies of the survey information provided by Uniplan are included in **Appendix J**.

7.0 DEVIATIONS FROM WORK PLAN

Borings SB-9, SB-10, and SB-19 were not sampled due to utilities. Boring locations SB-54 and SB-55 were added during the Site walk with OEHS.

8.0 HEALTH AND SAFETY

Fieldwork was performed in accordance with the Parsons Health and Safety Plan (HASP) and the requirements of the LAUSD. A copy of the HASP was on-Site during the field activities. A tailgate safety meeting was conducted daily prior to the start of work. An Activity Hazard Analysis appropriate to each field task was reviewed and a daily toolbox meeting record was signed prior to the start of any work on-site. Subcontractor personnel were trained to meet all HASP requirements.

9.0 PUBLIC PARTICIPATION

The California Department of Education maintains various statistics. Among these statistics is that Spanish is the Learner Language for about eighty-four percent (84%) of the student body at the Site. For this reason, all notices should be in both English and Spanish.

Prior to commencing fieldwork, an English and Spanish Assessment Work Notice (Notice) was mailed to parents of the school students. The Notice (**Appendix B**) was also distributed to line-of-sight neighbors (residences and businesses), staff and faculty, and properties within 500 feet of the school perimeter. Laminated copies were also posted at four locations around the perimeter of the school.

Two versions of this PEA-E are being created: a draft and a final version. The difference between the two depends on if the public has had a chance to comment on the document as part of the California Environmental Quality Act (CEQA) approval process. The draft version is pre-public comment, and the final is post-public comment. The cover page of this document indicates which version of the document this is. The text of this section in this draft version will be revised in the final version to state:

- Where the draft PEA-E was posted online (likely to be https://www.lausd.org/siteassessment)
- When the public comment period occurred,
- Copies of all comments received, if any, and
- Responses to all comments in English and Spanish.

10.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

The following findings were derived from the soil sampling and analyses conducted at the Canoga Park Senior High School:

- **Arsenic** - The concentrations of arsenic in the samples analyzed from 21 of the 52 borings at 0.5-ft bgs were greater than the PSL of 12 mg/kg. In addition, six (6) of these samples had duplicates with concentrations that exceeded the arsenic PSL. Nine (9) stepdown samples from 2.0-ft bgs also had arsenic concentrations that exceeded the PSL. The site-wide 95% upper confidence limit of the UCL for arsenic was calculated using PROUCL for soil samples collected by Parsons with a result less than 30 mg/kg. The recommended UCL for arsenic for this subset of the data was 11.9 mg/kg. Step-out sampling was conducted at nine (9) initial boring locations with arsenic results that exceeded 30 mg/kg to delineate impacts that are recommended for removal. Step-down and lateral step-out sampling was conducted until the detected arsenic concentrations were below the PSL of 12 mg/kg, a building foundation was reached, access was limited, or multiple subsurface utilities were encountered. The arsenic concentrations at multiple boring locations exceeded 50 mg/kg requiring STLC analysis. The arsenic STLC result was exceeded in the 0.5-ft samples at SB-5-E20, SB-7-W10, SB-26-SW10, SB-26-SE10, SB-26-E10, SB-34-N10, SB-34-S10, SB-38-S10, SB-38-W5, SB-38-N10, SB-51-W5, and SB-51-SW10. The STLC result was exceeded in the 2.0-ft samples at SB-34, SB-51-W5, and SB-51-SW10. The STLC result was exceeded in the 3.0-ft sample at SB-51-SW10. TCLP analyses were performed at all locations in which the STLC was exceeded. There were no exceedances of the TCLP for arsenic. Therefore, the soil associated with the STLC exceedance from samples SB-7-W10, SB-26-E10, SB-34-N10, SB-34-S10, SB-38-S10, SB-38-W5, SB-38-N10, and SB-51W5 are non-RCRA hazardous, but hazardous in California.
- **Lead** - The concentrations of lead in the samples analyzed from the 0.5 ft bgs samples were greater than the PSL (80 mg/kg) in five (5) samples from the 52 initial boring locations. The step-down samples at 2.0-ft bgs vertically showed no detected concentrations greater than the PSL. The site-wide 95% UCL for lead was calculated using PROUCL for soil samples collected by Parsons that did not exceed the STLC. The recommended UCL for lead for this sub-set of data was 18.75 mg/kg. Step-out sampling was conducted at four (4) sample locations with lead results that exceeded 5.0 mg/L for STLC to delineate impacts that are recommended for removal. Step-down and lateral step-out sampling was conducted until the detected lead concentrations were below the PSL of 80 mg/kg, a building foundation was reached, access was limited, or multiple subsurface utilities were encountered. The lead concentrations at multiple boring locations exceeded 50 mg/kg requiring STLC analysis. The lead STLC result was exceeded in ten locations (SB-1, SB-1-SW5, SB-3, SB-3-SW5, SB-3-SE5, SB-3-S10, SB-28, SB-28-E10, SB-39, and SB-39-N5). Due to these exceedances, TCLP analyses were performed. There were no exceedances of the TCLP for lead. Therefore, the soil associated with STLC exceedances

from locations SB-1, SB-1-SW5, SB-3, SB-3-SW5, SB-3-SE5, SB-28, SB-28E10, SB-39, and SB-39N5 are non-RCRA hazardous, but hazardous in California.

- **Hexavalent Chromium** - A total 17 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for hexavalent chromium by EPA Method 7199. Detected hexavalent chromium concentrations ranged from non-detect (multiple boring locations) to 0.53 mg/kg (SB-22-D0.5). The concentration at SB-22-D0.5 exceeded the PSL (0.3 mg/kg). To bound the vertical extent of hexavalent chromium, the step-down sample at 2.0-ft bgs was analyzed for hexavalent chromium. The hexavalent chromium concentration in the vertical step-down sample was below the PSL. Several site-wide 95% UCLs for hexavalent chromium were calculated using PROUCL. The recommended UCL for hexavalent chromium was 0.285 mg/kg.

- **Cadmium, Nickel and Mercury** – A total of 17 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for cadmium, nickel, and mercury by EPA Method 6010B. Sample results for each metal were below their PSLs.

- **OCPs** - Shallow soil samples (0.5-ft bgs) at the 52 initial boring locations (SB-1 through SB-8; SB-11 through SB-18; and SB-20 thru SB-55) along with five (5) duplicates were collected and analyzed for OCPs by EPA Method 8081A. The dieldrin detection at SB-32-D0.5 at 82.8 µg/kg was the only OCP detection above PSLs. To bound the vertical extent of dieldrin detection at SB-32-D0.5, a step-down sample at 2.0-ft bgs was analyzed for OCPs. The dieldrin concentrations in the vertical sample at SB-32 was below the PSL. Several site-wide 95% UCLs for dieldrin were calculated using PROUCL. The recommended UCL for dieldrin was 1.3 mg/kg; which is below the PSL of 34 µg/kg.

- **PCBs** - A total of 20 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for PCBs using EPA Method 8082. The PCB detection (Aroclor-1254) at SB-22-D0.5 (293 ug/kg) was greater than the PSL. Given the detection of Aroclor-1254drin greater than the PSL in SB-22-D0.5, the 2.0-ft bgs sample was analyzed and the result was below the PSL. The site-wide 95% UCL for Aroclor-1245 was calculated using PROUCL. The recommended UCL for Aroclor-1254 was 42.46 µg/kg; which is below the Aroclor-1254 PSL of 240 ug/kg.

- **PAHs** - A total of 17 shallow soil samples (0.5 ft bgs) including two (2) duplicate samples were collected and analyzed for PAHs using EPA Method 8270 SIM. PAHs were not detected above the PSL in any soil samples; therefore, no samples were analyzed from samples collected at 2.0-ft bgs and/or 3.0-ft bgs.

- **TPH** - A total of five (5) shallow soil samples (0.5 ft bgs) including one (1) duplicate sample were collected and analyzed for TPH as gasoline (C4-C12), TPH as Diesel (C13-C22), and TPH as Heavy Hydrocarbons (C23-C40) by EPA Method 8015. None of the detected concentrations of TPH was greater than their respective PSLs.

- **VOCs** - A total of five (5) shallow soil samples (0.5 ft bgs) including one (1) duplicate sample were collected and analyzed for VOCs by EPA Method 8260. Three (3) VOCs were detected in the samples analyzed: acetone, benzene and toluene. None of the detected VOC concentrations was greater than their respective PSLs.
- **Asbestos** - A total of 15 shallow soil samples (0.5 ft bgs) plus two duplicate samples were collected and analyzed for ACM by Method EPA 600/r-93-116 & EPA 600/M4-82-020. ACM was not detected in any of the 17 samples analyzed.

The following conclusions were derived from the soil sampling and analyses conducted at the Canoga Park Senior High School:

- Detections, if any, of cadmium, nickel, mercury, PAHs, TPH, VOCs, and asbestos were all below levels of regulatory concern.
- PROUCL was used to support that individual detections above PSLs for hexavalent chromium, OCPs, and PCBs can be left in place when considered from a site-wide perspective.
- An estimated 273 CY of soil at twelve (12) locations are impacted by arsenic and/or lead based on the results of the field investigation. Approximately 174 CY can be managed as non-hazardous waste (above PSL, but non-hazardous) and approximately 99 CY can be managed as non-RCRA (hazardous in California) hazardous waste. The restrictions of SCAQMD Rule 1466 will apply to the excavation and offsite disposal of this soil.

The following recommendation is based on the above conclusions:

- A Soil Removal Plan (SRP) should be developed for the Site to address shallow soil impacted with lead and/or arsenic as identified in this PEA-E. The SRP should include the following:
  - Summary of this PEA-E,
  - Requirements for public participation,
  - Requirements/restrictions for excavation activities,
  - Requirements/restrictions for soil storage,
  - Requirements/restrictions for transportation,
  - Requirements/restrictions per Rule 1466,
  - Confirmation sampling program,
  - Requirements for a Soil Removal Completion Report.

OCPs = Organochlorine Pesticides (8081A)
Lead (6010)
Arsenic (6020)
PCBs = Polychlorinated biphenyls (8082)
VOCs = Volatile Organic Compounds (8260B)
TPH = Total petroleum hydrocarbons (full-carbon chain by 8015M)

Samples screened using a photo-ionization detector

Notes:

1 - Residential screening levels were taken from the following sources:
Arsenic: DTSC. 2020. Southern California Ambient Arsenic Screening Level. HHRA Note 11. December.
Other metals: DTSC. 2022a. DTSC-modified Screening Levels. HHRA Note 3. May.

2 - Using mercuric chloride to represent mercury

Yellow highlighted cell = concentration exceeds respective screening level

Grey highlighted cell indicates step-out sample location

J = Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit and the Reporting Limit.

ND = Analyte is not detected below the Mehod Detection Limit

mg/kg = miligrams per kilogram

ft bgs = feet below ground surface

mg/L - milligrams per liter

STLC - soluble threshold limit concentration

TCLP - Toxicity Characteristic Leaching Procedure

TABLE 4
ANALYTICAL RESULTS FOR ORGANOCHLORINE PESTICIDES IN SOIL
LAUSD - CANOGA PARK SENIOR HIGH SCHOOL

FIGURES A-C PROPOSED SAMPLING PLANS

1.0 INTRODUCTION

This Preliminary Environmental Assessment Equivalent (PEA-E) Workplan for Soil Sampling (PEA-E Workplan) at selected areas of Los Angeles Unified School District's (LAUSD) Canoga Park Senior High School (Campus) presents the scope of work and technical approach to perform PEA-E activities for the proposed modernization project planned for more than 50% of the campus next year (2024). The "Site" is an existing active school on approximately 21.4 acres and is located at 6850 Topanga Canyon Boulevard in the community of Canoga Park in Los Angeles, California (Figures 1 and 2).

This work has been requested by the LAUSD based on results of a Phase I Environmental Site Assessment (ESA) prepared by Eco & Associates, Inc. (Eco) dated February 18, 2019, for the Campus property. The results of the sampling proposed in this PEA-E Workplan will be submitted to the LAUSD in a PEA-E Report.

The goal of performing the scope of work described in this PEA-E Workplan is to determine if historical or recent activities or materials have adversely impacted the surface soil or shallow soil

(0 to 36 inches below ground surface [bgs]), prior to grading and construction for the proposed new Site development.

The results of the Phase I ESA research indicated there were historical, potential, and other recognized environmental conditions (RECs) found within the Campus footprint. As a result of the RECs, Eco made the following recommendations:

Lead-Based Paint. Prior to disturbing soil at the Site, it is recommended that representative soil samples be collected within the associated area(s) and analyzed for lead. The results of the investigation should be used to determine if the lead concentrations in soil in these areas are a potential threat to human health.

Arsenic. Prior to disturbing any asphalt at the Site, it is recommended that representative soil samples be collected beneath the asphalt within the associated area(s) and analyzed for arsenic. The results of the investigation should be used to determine if the arsenic concentrations in soil in these areas are a potential threat to human health.

OCPs. Prior to their removal, it is recommended that representative soil samples be collected around wooden structures and analyzed for OPCs. The results of the investigation should be used to determine if the OCP concentrations in soil in these areas are a potential threat to human health.

Transformers. If future construction activities encroach into the immediate vicinity of pad-mounted transformers, it is recommended that the adjoining soil be assessed for the possible presence of PCBs prior to disturbing the soil around the transformers. The results of the investigation should be used to determine if there are detectable concentrations of PCBs in this soil and if the detectable PCBs are a potential threat to human health.

Hydrocarbons. Due to the previous use of the southern part of building Shop #2 as an auto shop, the presence of underground lifts, and an associated clarifier, this area was considered a potential REC. However, the extent of a potential leak is expected to be limited in the soils below the building due to the heavy nature of the hydraulic fluid. Assessment of the soils below the building and clarifier for the possible presence of hydrocarbons is recommended if future construction activity is planned that will disturb soil beneath the building.

Radon. Due to the high potential for indoor-radon levels above 4.0 microcuries per liter at the Site and its surroundings, it is recommended that radon mitigation measures be included in any future buildings or additions.

The scope of work presented in this PEA-E Workplan was designed to assess each of the recommendations stated above. The following subsections provide a Site description, objectives, and scope of work for this assessment.

1.1 SITE DESCRIPTION AND BACKGROUND

Canoga Park Senior High School had approximately 1,500 students in the grades 9-12, five (5) administrators, seventy-eight (78) teachers, and thirty-nine (39) support staff in the 2021-2022 school year. The campus initially opened in 1915 as Owensmouth High School and currently

consists of nineteen (19) permanent buildings, sixteen (16) portable buildings, an athletic field, paved driveways and parking areas, and landscaping. The Campus is approximately 21.4 acres within Assessor Parcel Number 2138-001-900.

A Phase I Environmental Site Assessment Report was completed by Eco & Associates, Inc. in 2019. LAUSD is proposing to remove/improve the following within the eastern half of the Site (which are the subject of the Assessment):

- Remove the existing Food Service/Cafeteria MPR/lunch shelter building, 3 classroom buildings, the Maintenance & Operations (M&O) building and 48 relocatable/modular classrooms.
- Construct a Food Services/MPR/M&O area and 57 classrooms in permanent buildings.
- Seismic retrofit of physical education building.
- Complete site-wide infrastructure upgrades.

1.2 OBJECTIVES

The objective of the proposed sampling is to determine if any environmental issues will need to be mitigated either prior to or during the Campus improvement activities described above. A determination will also be made as to whether or not the requirements of South Air Quality Management District Rule 1466 apply to soil handling activities.

Figure 3 depicts the proposed soil sampling locations. Soil samples will be analyzed utilizing an off-site fixed laboratory. A brief description of the proposed soil sampling is provided in Table 1.

2.0 FIELD ACTIVITIES

Field work will be implemented in general accordance with *Drilling, Logging, and Sampling at Contaminated Sites* (DTSC, 2013) and *Interim Guidance Evaluation of School Sites with Potential Soil Contamination as a Result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers* (DTSC, 2006). The initial sampling phase is anticipated to be conducted and completed in early April 2023. Based on the initial sample phase results, which will be presented to LAUSD, a second sampling phase for step-out sampling will be conducted over summer recess between June 19 and July 14, 2023.

2.1 UTILITY OWNER NOTIFICATION AND GEOPHYSICAL SURVEY

As required by Underground Service Alert (USA), the proposed soil sampling locations will be marked with white paint and USA will be notified of the proposed drilling locations at least 72 hours prior to initiating drilling activities. USA will contact all utility owners of record within the Site vicinity and notify them of the planned subsurface investigation. All utility owners of record, or their designated agents, will be expected to clearly mark the position of their utilities on the ground surface throughout the area designated for investigation, up to the school property line.

The proposed boring locations will also be surveyed by a private utility locator for the presence of underground utilities using geophysical methods (including ground penetrating radar, electromagnetic utility locating, and deep search metal detector).

2.2 SOIL SAMPLING AND ANALYSES

Soil samples in the top 3 feet will be collected using a hand auger. Soil samples will be collected in new laboratory-provided glass jars, which will then be placed in individual sealable plastic bags. Each sample jar will be labeled individually, stored in an ice chest, and delivered to the laboratory with a chain-of-custody form. Soil samples will be collected from 54 locations throughout the Campus as identified on Figure 3. Samples at each location will be collected from 0 to 0.5 feet (starting at bottom of pavement, if present), 1.5 to 2.0 feet and 2.5 to 3.0 feet bgs. Excess soil from each boring will be temporarily stored in a Department of Transportation (DOT) approved container.

Per LAUSD request, boring logs will not be generated, but general soil types will be noted to allow a comparison between analytical results and soil types. Soil samples will be analyzed by a California Environmental Laboratory Accreditation Program (ELAP) certified laboratory. The samples will be analyzed as follows:

- Samples collected to assess lead will be analyzed using EPA Method 6010B.
- Samples collected to assess arsenic will be analyzed using EPA Method 6020.
- Samples collected to assess OCPs will be analyzed using EPA Method 8081.
- Samples collected to assess TPH will be analyzed using EPA Method 8015.
- Samples collected to assess Title 22 Metals will be analyzed using EPA Method 6010/7471.

- Samples collected to assess VOCs will be analyzed using EPA Method 8260B.
- Samples collected to assess PAHs will be analyzed using EPA Method 8270.
- Samples collected to assess PCBs will be analyzed using EPA Method 8082.
- Samples collected to assess asbestos will be analyzed using PLM or 600/R-93/116.

All soil samples collected from 0.0 to 0.5-feet will be analyzed on a standard turnaround time for lead, arsenic and OCPs. Select samples from 0.0 to 0.5-feet will also be analyzed for VOCs, TPH and PCBs based on their location near former school facilities/rooms (i.e., transformers, wood shop and auto repair classrooms) that may have contained/utilized these constituents.

Samples deeper than 0.5 feet will be placed on hold pending the analysis of the 0.0 to 0.5 foot samples. If step down samples need to be analyzed (based on the results of the initial sample analysis), these analyses will be made in consultation with the LAUSD.

Step-down (deeper) samples will be analyzed for any boring location if total lead concentration in a sample is greater than 80 mg/kg, or if an arsenic concentration is greater than 12 mg/kg, after consultation with and confirmation from LAUSD.

A total of 20% of the samples collected will be analyzed to determine if results will trigger South Coast Air Quality Management District (SCAQMD) Rule 1466 monitoring during construction. These analyses will include the full suite of those identified above, with the exception of VOCs and TPH which are covered under SCAQMD Rule 1166.

As part of the quality assurance/quality control process, duplicate soil samples will be collected at a rate of 10 percent of the total samples collected.

2.3 EQUIPMENT DECONTAMINATION

Equipment used during the hand augering and soil sampling activities will be decontaminated prior to use at each sampling point to reduce the potential for cross-contamination. Equipment (e.g., hand auger, rods, etc.) will be cleaned thoroughly (inside and outside) with a dry decontamination system consisting of wire brushes and wet wipes. If the dry decontamination is ineffective due to material sticking to the hand auger, a wet decontamination system will be used consisting of a wash with a non-phosphate detergent, a rinse with tap water and a final rinse with distilled water. The equipment decontamination system will be set up in a predetermined location near each sampling area. New disposable nitrile gloves will be worn when handling clean sampling equipment to help ensure the equipment is not cross-contaminated.

Decontamination water generated during the field activities will be stored in a properly labeled Department of Transportation-approved container, and sealed and placed in a designated, secure area away from students at the Site. The container will be labeled with the investigation-derived waste (IDW) generation date, associated sample locations, and contents.

2.4 SURFACE RESTORATION

Boreholes will be backfilled with material extracted from the borehole for sampling. Inert material such as sand will placed on top of the boring materials to bring subsurface soil up to existing grade or 3-inches below grade for areas to be capped with asphalt. If the final surface is asphalt, it will match the grade of the surrounding surface and will consist of a minimum of 3 inches of compacts cold-patch asphalt or soil (if boring surface is soil).

2.5 INVESTIGATION DERIVED WASTE (IDW) MANAGEMENT

Potentially contaminated IDW may be generated that include the following:

- Used personal protective equipment (PPE)
- Asphalt Cores

Procedures to be followed for IDW handling:

- Used PPE and disposable equipment will be bagged and placed in a municipal refuse dumpster located at the Site. These wastes are not considered hazardous and can be sent to a municipal landfill.
- Asphalt cores will be double bagged and placed in a labeled DOT-approved container. The container will be sealed so it is watertight, pending receipt of analytical results.

Following receipt of analytical results, the asphalt cores will be disposed at an LAUSD-approved disposal/treatment/recycling facility. Shipping documents (e.g., bill of lading, waste manifest, etc.) will be included in the PEA-E report. All shipping documents will be signed by a representative of LAUSD, with the LAUSD listed as waste generator.

2.6 QUALITY ASSURANCE AND QUALITY CONTROL MEASURES

An integral part of the sampling and analysis plan is quality assurance/quality control (QA/QC) procedures to ensure the reliability and compatibility of all data generated during the investigation. The chemical data to be collected for this effort will be used to determine that the extent of contamination is properly evaluated. These QA/QC procedures include:

- Adherence to protocols for field sampling and decontamination procedures;
- Collection and laboratory analysis of duplicate samples;
- Laboratory analysis of samples to evaluate analytical precision and accuracy; and
- Attainment of completeness goals.

2.7 HEALTH AND SAFETY

Fieldwork will be performed in accordance with a Health and Safety Plan (HASP) and the requirements of the LAUSD. A copy of the HASP will be on-Site during field activities. An Activity Hazard Analysis (AHA) appropriate to each field task will be reviewed and a daily toolbox meeting record will be signed each day prior to the start of any work on-site. A copy of this plan will be provided on request. It should be noted that some of the asphalt coring

operations may be conducted in areas with the potential to have asbestos containing construction materials (ACCM) present. This work will be overseen by a California Certified Asbestos Consultant and will be conducted with California Certified Asbestos Technicians.

3.0 REPORTING AND SCHEDULE

A summary report documenting the soil sampling activities and results will be provided to the LAUSD in a PEA-E report. The report will include, at a minimum, the following information:

- Executive Summary,
- Site Description and Background,
- Environmental Setting,
- Discussion of Phase I ESA items,
- Sampling Activities and Results,
- Human Health Screening Evaluation (HHSE) and/or comparison of the sampling results to the preliminary screening levels PSLs (e.g., if all below PSLs, no HHSE is needed),
- Final Community Profile/Outreach document as an appendix including Transcript from Public Meeting,
- Photographs, Figures and Tables,
- Opinion of Environmental Professionals,
- Conclusions and Recommendations (no further action or further action is required), and
- References

The following tables and figures will be included in the report:

- Site Location Map
- Site plan and sample location map
- Tabulated analytical results
- Certified analytical laboratory reports
- Investigation-derived waste disposal documentation

OCPs = Organochlorine Pesticides (8081A)
Lead (6010)
Arsenic (6020)
PCBs = Polychlorinated biphenyls (8082)
VOCs = Volatile Organic Compounds (8260B)
TPH = Total petroleum hydrocarbons (full-carbon chain by 8015M)

Samples will be screened using a photo-ionization detector

December 8, 2017

TO: Neighbors and Community Members of the Reseda High School

FROM: Los Angeles Unified School District
Office of Environmental Health and Safety

REGARDING: Preliminary Environmental Assessment
Reseda High School, Los Angeles, California

The Los Angeles Unified School District (LAUSD) - Office of Environmental Health and Safety (OEHS) would like to provide you with advance notice of a Preliminary Environmental Assessment (PEA) that will be conducted within the boundaries of Reseda High School, located at 18230 Kittridge Street, Reseda, California. The PEA will be conducted across most of the campus scheduled to undergo a comprehensive modernization.

A licensed contractor, working on behalf of LAUSD, will perform the environmental investigation under the independent oversight of the LAUSD-OEHS, which is independent from the LAUSD Facilities Services Division (The Facilities Services Division is the responsible Branch for the development and construction of the project). The environmental investigation will consist of the sampling of soil in the locations on campus where existing buildings will be demolished, new buildings will be constructed, and where a former clarifier, paint spray booth, and incinerator were previously located. Soil will be analyzed for potential residual arsenic, hydrocarbons, lead-based paint, polychlorinated biphenyls (PCBs), organochlorine pesticides (OCPs), dioxins/furans, and volatile organic compounds (VOCs) in soil and soil gas. If necessary, a soil cleanup will be performed prior to construction activities to protect students, faculty, and staff.

Fieldwork is scheduled to begin on December 18, 2017, and is expected to be completed in 6 days. All fieldwork is scheduled to be conducted when students are away from school, between 7:00 am and 5:00 pm.

The results of the investigation will be submitted to LAUSD-OEHS in a report for review. The report will include an assessment of whether any of the above listed compounds are present in soil at concentrations that would require further assessment or a response action before the Site is cleared for construction activities. When the OEHS's review is complete, OEHS will issue a determination with regard to the assessment.

If you have any questions concerning the upcoming environmental investigation or other related activities for the proposed comprehensive modernization of Reseda High School, please contact Dane Robinson, LAUSD Office of Environmental Health and Safety Site Assessment Project Manager, at (213) 241-4122 (email at dane.robinson@lausd.net).

ASUNTO: Evaluación Ambiental Preliminar
Reseda High School, Los Angeles, California

La Oficina de Salud y Seguridad Ambiental (OEHS) del Distrito Escolar Unificado de Los Ángeles (LAUSD) les informa con anticipación que se llevará a cabo una Evaluación Ambiental Preliminar (PEA) dentro de los límites de Reseda High School, ubicada en 18230 Kittridge Street, Reseda, California.. La PEA se llevará a cabo en la mayor parte del campus que será sometido a una modernización integral.

Un contratista con licencia, que trabaja en nombre de LAUSD, realizará la investigación ambiental bajo la supervisión de LAUSD-OEHS, que es independiente de la División de Servicios de Instalaciones de LAUSD (la División de Servicios de Instalaciones es la rama responsable del desarrollo y construcción del proyecto). La investigación ambiental consistirá en la toma de muestras de suelo en aquellos lugares del campus donde se demolerán los edificios existentes, se construirán nuevos edificios y donde anteriormente se encontraba un clarificador, una cabina de pintura y un incinerador se encontraban anteriormente. El suelo se analizará para detectar la posible presencia de arsénico residual, hidrocarburos, pintura a base de plomo, bifenilos policlorados (PCB), pesticidas organoclorados (OCP), compuestos orgánicos volátiles (VOC) en el suelo y gas del suelo. De ser necesario, se realizará una limpieza del suelo antes de que comiencen las actividades de construcción para proteger a los estudiantes, profesores y personal.

El trabajo de campo está programado para comenzar el 18 de diciembre de 2017, y se anticipa que terminará en seis días. Todo el trabajo de campo está programado para llevarse a cabo cuando los estudiantes no estén en la escuela, entre las 7:00 am y 5:00 pm.

Los resultados de la investigación se presentaran a LAUSD-OEHS en un informe para su revisión. El informe incluirá una evaluación en la cual se especificará si cualquiera de los compuestos mencionados anteriormente se encuentra presente en concentraciones tales que requeriría una mayor evaluación, o si se requieren acciones de respuesta antes de que se limpie el Sitio para iniciar las actividades de construcción. Una vez concluida la revisión de OEHS, OEHS emitirá una determinación con respecto a la evaluación.

Si tiene cualquier duda o pregunta relacionada con la investigación ambiental u otras actividades relacionadas con la modernización integral de Reseda High School propuesta, favor de contactar a Ddiane Robinson, Gerente de Proyecto de Evaluación de Sitios de la Oficina de Salud y Seguridad Ambiental de LAUSD al teléfono (213) 241-4122 (o por correo electrónico a dane.robinson@lausd.net)

Si desea información en Español comuníquese con Teresa Akins en FSD Relaciones con la Comunidad al (213) 241-1326 (línea directa) o (213) 241-1340 (línea principal) o por correo electrónico a teresa.akins@lausd.net.

Re: Geophysical Investigation Report, LAUSD Canoga Park High School; 6850 CA-27, Canoga Park, California 91303

This report is to present the results of our geophysical survey carried out at LAUSD Canoga Park High School located at 6850 CA-27, Canoga Park, California 91303 (Figure 1). The survey was performed on March 31st & April 3rd, 2023, and its purpose was to locate and identify, insofar as possible, pipes, conduits, utilities, and other underground obstructions within a ten (10) foot radius around fifty-three (53) proposed boreholes.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were brought to the field in anticipation of use. Utility locators with line tracing capabilities were also used where applicable.

Survey Design – The survey site was located at Canoga Park High School. The fifty three boreholes were positioned throughout the school with their exact locations indicated in the field by the client.

For this particular site and survey objectives, the best use of time was achieved by systematically free-traversing with the instruments while monitoring them manually, continuously, and in real-time to determine which responses were significant and due to true subsurface targets, and which were due to other non-target or above-ground features and must be ignored (an example being nearby buildings and rebar reinforced concrete). In these situations, the free-traversing method is advantageous in that it allows for immediate detection of anomalous objects and facilitates the opportunity to investigate them further despite any obstructions and without the need to first download data. Where applicable, and depending on location, the EM devices, magnetic gradiometer, and GPR were traversed systematically over the survey areas in multiple, organized directions. Other traverses were taken for detailing and confirmation where anomalous conditions were found.

In addition, the line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals found in active electrical and communication lines.

A Geonic's model EM61 and a Fischer TW-6 M-Scope was used for the EM sampling. A Sensors & Software Noggin Ground Penetrating Radar unit with a 250 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the

subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the complete findings of our investigation were marked on the ground cover at the site using spray chalk, were reported directly to the client, and are further documented with site photographs of the proposed boreholes (Figures 2-54).

Items detected in the vicinity of the boreholes are highlighted in the accompanying photographs using coordinated standard colors including red for electric, orange for communication, blue for water, yellow for gas, green for sewer and drain, and white for pipes of unknown utility type. Please review the site photographs for the locations and orientations of all items found within the vicinity of the boreholes.

At the conclusion of the survey, all boreholes were either clear as where originally positioned by the client or were moved slightly to provide adequate clearance from detected obstructions. In their final locations, each location was marked in white with a yellow "SSS" to indicate that they had been checked by company personnel.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which such might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limited GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing or vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data generated on this project are in confidential file in this office, and are available for review by authorized persons at any time. The opportunity to participate in this investigation is very much appreciated. Please call, if there are questions.

Survey Design – The survey site was located at Canoga Park High School. The twenty-one offset/step-out boreholes were positioned throughout the school with their exact locations indicated in the field by the client.

For this particular site and survey objectives, the best use of time was achieved by systematically free-traversing with the instruments while monitoring them manually, continuously, and in real-time to determine which responses were significant and due to true subsurface targets, and which were due to other non-target or above-ground features and must be ignored (an example being nearby buildings and rebar reinforced concrete). In these situations, the free-traversing method is advantageous in that it allows for immediate detection of anomalous objects and facilitates the opportunity to investigate them further despite any obstructions and without the need to first download data. Where applicable, and depending on location, the EM devices, magnetic gradiometer, and GPR were traversed systematically over the survey areas in multiple, organized directions. Other traverses were taken for detailing and confirmation where anomalous conditions were found.

In addition, the line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals found in active electrical and communication lines.

A Geonic's model EM61 and a Fischer TW-6 M-Scope was used for the EM sampling. A Sensors & Software Noggin Ground Penetrating Radar unit with a 250 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of

electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the complete findings of our investigation were marked on the ground cover at the site using spray chalk, were reported directly to the client, and are further documented with site photographs of the proposed boreholes (Figures 2-12).

Items detected in the vicinity of the offset/step-out boreholes are highlighted in the accompanying photographs using coordinated standard colors including red for electric, orange for communication, blue for water, yellow for gas, green for sewer and drain, and white for pipes of unknown utility type. Please review the site photographs for the locations and orientations of all items found within the vicinity of the offset/step-out boreholes.

At the conclusion of the survey, all offset/step-out boreholes were either clear as where originally positioned by the client or were moved slightly to provide adequate clearance from detected obstructions. In their final locations, each location was marked in white with a yellow "SSS" to indicate that they had been checked by company personnel.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which such might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limited GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey

can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing or vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data generated on this project are in confidential file in this office, and are available for review by authorized persons at any time. The opportunity to participate in this investigation is very much appreciated. Please call, if there are questions.

Mr. Eric Longenecker
Site Assessment Project Manager
Los Angeles Unified School District
Office of Environmental Health & Safety
333 South Beaudry, 21st Floor (21-224-01)
Los Angeles, CA 90017

Re: Asbestos Containing Construction Material (ACCM) Coring Activities
Canoga Park High School
Los Angeles, California

Dear Mr. Longenecker,

The following is a letter workplan for the coring and management of asphalt at the subject Site that may contain asbestos containing construction material (ACCM). The assumption is that these materials do contain ACCM; therefore, our workplan addresses the requirements for the handling and management of the cores that will be generated during asphalt coring activities. The work will be completed by asbestos trained staff from American Integrated Services (AIS) under the direction of Panacea Environmental, an asbestos abatement certified firm, and Parsons.

Scope of Work:

Removal of ACCM Asphalt via 4-inch coring machine equipped using amended water (wet method) to eliminate potential asbestos emissions in approximately 32 locations within the boundaries of the Canoga Park High School in support of future construction at the Site.

Work to be done as in general compliance with LAUSD, 02 8213 specifications.

1.0 NOTIFICATIONS

A. No notifications are being made other than to OEHS for project purposes.

2.0 LICENSES AND CERTIFICATIONS

A. All work will be done by Asbestos Certified labors and Supervisor as in general compliance with AHERA (40CFR part 763 subpart E) including oversight by a Panacea Environmental Certified Asbestos Consultant.

3.0 WORK AREA PREPARATION

A. AIS' personnel will contain approximately 20 feet around the affected work area using cones and caution tape with Danger Asbestos signs per CAL-OSHA regulations that will be installed around the work areas where the potential for

ACCM is present. This containment will be setup at each location prior to implementation of asphalt coring activities.

B. Electrical power will be needed to power the asphalt coring machine. This power will be provided by AIS via portable generator.

C. AIS will protect all non -movable items inside the affected work area.

D. AIS will provide and maintain appropriate fire extinguisher at each work area, as per L.A. City Fire Department Rule No. 68.

4.0 CONTAINMENT LOCATIONS

A. 32 exterior asphalt areas including parking lots, paved walking areas and cart paths as shown in Figure 1.

5.0 DECONTAMINATION STATION

A. AIS/Panacea will construct one (2) stage decontamination station at the entrance/exit of the work area to prevent the potential for transfer of contamination to other locations.

6.0 DECONTAMINATION SYSTEM FOR EQUIPMENT

A. AIS/Panacea personnel will set up a decontamination area for equipment, located at the entrance of each phase- work area, consisting of demarcation of the area by physical signs, and 10 mil polyethylene sheeting on the floor, all equipment used will be accessing the area through this decontamination area, enough water and rags will be provided to decontaminate the equipment.

7.0 EMPLOYEE PERSONAL PROTECTIVE EQUIPMENT

A. Respiratory Protection: Where respirators are required, these will be provided for protection from particulate contaminants as required by the National Institute of Occupational Safety and Health. The respirators provided shall furnish a protection factor as required by CCR Title 8, Section 1529 for the fiber concentration in the work area. AIS will provide ½-face respirators with a sufficient supply of replacement HEPA filters for their personnel. P-100, Negative and positive flow test will be done prior to work when they are wearing the respirator. At the end of each shift the personnel protective equipment, disposable suits and filters will be collected and placed in DOT approved 55-gallon drums.

B. Protective Clothing: AIS will provide disposable protective clothing as required; full body disposable protective clothing including head, body, gloves, and foot coverings, shall be provided to all workers and authorized visitors in sizes adequate to accommodate movement without tearing. A new suit shall be donned upon each each work day.

C. All used PPE as well as respirators filters will be collected in a 55 DOT approved metal drum and placed in a proper storage area, for further disposal as Asbestos – Hazardous waste, proper paperwork. A manifest will be provided for pre-approval before the disposal is completed.

8.0 REMOVAL OF ACCM ASPHALT

A. Removal will be done using mechanical equipment and hand tools, minimizing material breakage.

B. Removal will be done under full PPE, and wet methods, using a combination of hand tools and a concrete/asphalt coring machine powered by a generator.

C. The ACCM Asphalt will be properly wet with amended water, during the removal and cleanup process.

D. Asphalt will be removed in small 3- or 4-inch diameter cores, trying to maintain the integrity of the soil or base materials beneath the asphalt for future environmental sampling.

E. Generated cores, because they are assumed to be ACCM, will be double bagged and placed in a 55-gallon DOT approved drum for disposal at a later date as non-friable ACCM.

F. Upon completion of removal of the cores at each location, a detail cleanup will be done using vacuums.

G. Upon completion AIS will notify Panacea that each work area is ready for visual inspection.

H. Visual inspection will be requested once the removal, transportation and cleanup is complete, upon satisfactory visual inspection by Panacea the cones, caution tape and signs will be removed.

9.0 TEARDOWN AND DEMOBILIZATION

A. AIS will proceed with the teardown when satisfactory visual inspection is achieved.

10.0 HANDLING AND DISPOSAL PROCEDURES

A. As the work progresses, all generated concrete cores and PPE will be placed in 55-gallon DOT approved drums that will be transported to an approved landfill for disposal.

B. All materials will be double bagged/wrapped in 6-mil polyethylene bags prior to placement in drums for eventual disposal at an appropriate landfill.

11.0 TRANSPORTER COMPANY AND FACILITY OR DISPOSAL NAME

A. Approximately 2 drums of material will be generated during ACCM coring operations: 1 drum of core materials and 1 drum of PPE.

B. Materials will be transported under manifest to the Azusa Land Reclamation Facility in Azusa, California or a landfill that has been approved by the LAUSD for management of ACCM.

12.0 DECONTAMINATION OF WORK AREA

A. AIS will remove all visible accumulations of debris by hand and vacuums.

B. AIS will do the final cleanup of the asphalt if required by Panacea and then request visual inspection by Panacea.

C. Removal of all cones, caution tape and signs after achievement of final visual inspection approval.

13.0 ENCAPSULATION

A. Not Applicable

14.0 DECONTAMINATION PROCEDURES FOR:

A. Equipment: Decontaminate all tools and equipment; these shall be cleaned using a filtered vacuum and wet cleaning methods. Remove the all-visible accumulations contaminated debris.

B. Personnel: Before leaving the regulated area for asbestos work, all personnel shall remove gross contamination from the outside of respirators and protective clothing by vacuuming and/or wet wiping methods.

1) Personnel shall proceed to the decontamination area where they remove all protective equipment except respirators. Deposit disposable clothing into appropriately labeled containers.

2) Still wearing respirator, personnel shall decontaminate hand, face and boots using wet wipe methods.

15.0 RENTAL EQUIPMENT

A. Not Applicable

16.0 AIR MONITORING/SAMPLING PROTOCOL

A. Perform personnel sampling including STEL and PEL in 29 CFR 1910 and 1926 to demonstrate appropriate worker PPE; engineering controls and work procedures, samples will be sent to independent laboratory and analyzed using NIOSH 7400 Method.

B. Negative exposure assessments are on file at Los Angeles Corporate Office for similar work tasks.

17.0 PROCEDURES FOR DEALING WITH HEAT STRESS

A. If any of the workers feel sick or do not feel good due to heat stress, they will notify the lead men and the lead men will immediately notify the onsite contact from Parsons.

B. All activities will be stopped, personnel will be decontaminated and moved to an

area that is cool and shaded. The supervisor will call 911, if necessary.

C. To prevent any type of problems AIS will provide proper shade and cold water outside the containment and 15-minute breaks if necessary, depending on the temperature of the work area.

18.0 SEQUENCE OF WORK ACTIVITIES

A. Work will begin at the locations designated by Parsons as having the potential for ACCM.

B. Setup will begin with cording off the work area with cones, caution tape and signage.

C. Coring work will be initiated with approval of the setup by Panacea including air monitoring.

D. Coring work will be completed, the debris will be double bagged and drummed.

E. The work area will be cleaned up with vacuums

F. Panacea will give clearance that the work was completed correctly.

G. Start the process over at a new location.

19.0 LAUSD REQUIREMENTS

A. All work perform by AIS will be in general accordance with all applicable Federal, State, and Local regulations, standards, and codes governing asbestos abatement and any other work performed in conjunction with the LAUSD Asbestos Abatement Specification Section 02 8213.

B. Comply with the provisions of the California Labor Code, Division 5, Part 1, as it pertains to safety in employment and the applicable provisions of Title 8, Chapter 4, and Subchapters 1 through 21, California Code of Regulations (CCR) as it pertains to Occupational Safety and Health, and Subchapter 7, Section 5208 Article 4, and Section 1529, Asbestos regulations.

C. See attach drawing for asphalt coring locations that may contain ACCM.

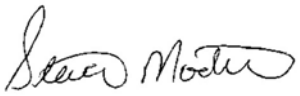
SUBJECT: Asphalt Coring Performed at the Exterior Locations
Canoga Park Senior High (8571)
at 6850 Topanga Boulevard, California 91303

This letter summarizes the work activity performed by Panacea, Inc. (Panacea) on June 16, 2023, involving the coring of asphalt material at various exterior locations at the above-reference school. The purpose of the asphalt coring was to allow access for soil sampling performed by Parsons and Rice General.

In lieu of sample results, the asphalt was assumed to be asbestos-containing material (ACM). Hence, Panacea, Inc. (Panacea) staff used work practices in accordance with Los Angeles Unified School District (LAUSD) asbestos-related work specifications and/or policies. Necessary precautions were taken during the coring process, and the asphalt cores were carefully put back to their original locations.



Since asphalt was assumed to contain asbestos, the coring work was performed using wet removal method by continuously applying water to the coring area to prevent generation of dust particles. This method effectively suppresses the release of asbestos fibers into the air and is widely recognized as an industry standard practice.

Throughout the coring process, Panacea's asbestos Certified Site Surveillance Technicians (CSST) wore appropriate personal protective equipment (PPE), including disposable coveralls, respirators, gloves, and protective eyewear. The asbestos-related work was performed under the direction of Panacea's Certified Asbestos Consultant (CAC).

Once the required soil core samples were obtained, the asphalt cores were put back to their original locations, patched with a new asphalt material, and the area was restored to its pre-drilling condition to the extent practical. The staff confirmed that no debris or residue was left behind, and the work area was thoroughly cleaned and inspected to meet the required standards.

If you have any questions or concerns, please feel free to contact me at (562) 860-2869.

Very truly yours,
PANACEA, INC.

MONITORING FORM

1. PROJECT INFORMATION

Sampled By:	Shalamar Buchanan and Steven Jacobo	Sample Date:	04/04/2023 through 06/13/2023
Project Name:	Canoga Park Senior High	Project No.:	C23-981ATM
Site Address:	6850 Topanga Blvd., Canoga Park, California		
Project Work Description/Objective:	Area air monitoring to evaluate airborne fiber/asbestos concentrations during asphalt coring.		
Abatement Performed:	Temporarily remove core of asbestos-containing asphalt in order to sample soil then re-insert core and patch hole.		

2. REMEDIATION COMPANY INFORMATION

Remediation Company:	America Integrated Services
Contact Name:	Jeff Spellman
Address:	2550 E. Miraloma Way
Phone:	(310) 987-0790

3. AIR SAMPLE EVALUATION CRITERIA

ANALYTICAL METHOD(S):	EVALUATION CRITERIA:
■ PCM – NIOSH 7400 (Onsite Analysis)	■ 0.01 F/CC (PCM ANALYSIS)
☐ TEM – NIOSH 7402	☐ 0.01 S/CC (TEM ANALYSIS)
☐ TEM – YAMATE LEVEL II	☐ 70 S/MM^2
☐ TEM – AHERA	☐ 0.1 F/CC (OSHA PEL)
	☐ 1.0 F/CC (OSHA EXCURSION LIMIT)

4. NOTES AND ABBREVIATIONS (Where Applicable)

CAC = Certified Asbestos Consultant.

CSST = Certified Site Surveillance Technician.

F/CC = Fibers per cubic centimeter of air (PCM analysis); S/CC = Structure per cubic centimeter of air (TEM analysis); S/MM2 = Structures per millimeter of filter area (TEM analysis); < = Less than or below detection limit of the analysis used.

F/100 = Fibers per 100 fields for blank filter analysis.

N/A = Not Applicable.

Pass*: Yes = Sample concentration below the evaluation criteria; Pass*: No = Sample concentration above the evaluation criteria.

PCM = Phase contrast microscopy.

TEM = Transmission electron microscopy.

5. AIR SAMPLE RESULTS

Air samples were collected during the abatement (removal) process for asbestos-containing gaskets and analyzed by staff onsite using PCM.

SAMPLE NO.	DATE	PCM RESULTS (F/CC)	LOCATION	PASS*
20230404SB-A-1	04/04/2023	<0.0032	Ground floor, Exterior, northern portion, outside containment	Yes
20230404SB-A-2	04/04/2023	<0.0032	Ground floor, Exterior, eastern portion, outside containment	Yes

20230405SB-A-2	04/05/2023	<0.0089	Ground floor, Interior, eastern portion, outside containment	Yes
20230405SB-A-3	04/05/2023	<0.0089	Ground floor, Interior, southern portion, outside containment	Yes
20230613SJ-A-1	06/13/2023	<0.0030	Ground floor, throughout, western portion, outside containment	Yes
20230613SJ-A-2	06/13/2023	<0.0030	Ground floor, throughout, southwestern portion, outside decontamination unit	Yes
20230613SJ-A-3	06/13/2023	<0.0030	Ground floor, throughout, southern portion, outside containment	Yes
20230613SJ-A-4	06/13/2023	<5.5 F/100	Field Blank	N/A

6. ASBESTOS VISUAL OBSERVATIONS

Asbestos visual observations were conducted by the onsite staff during asphalts coring process.

DATE	OBSERVED BY	COMMENTS
4/04/2023	Shalamar Buchanan	The work conducted on the exterior by AIS involved coring of the ACM asphalt and preparing for future soil sampling.
4/05/2023	Shalamar Buchanan	The work conducted on the exterior by AIS involved coring of the ACM asphalt and preparing for future soil sampling.
6/13/2023	Steven Jacobo	The work conducted on the exterior by Panacea involved coring of the ACM asphalt and preparing for future soil sampling.

7. VISUAL OBSERVATION RESULTS

Regulated work area established?	No
Negative air filtration device used?	No, wet methods used, ACM removed intact.
HVAC unit turned on during sampling?	No (openings sealed)
Sample collected during normal business hour?	N/A
Sample collected during normal business activities?	No (vacant building)
Significant dust or debris observed or remained?	No

8. CONCLUSION

Based on the in-house analytical result(s), current regulatory guidelines, state-of-the-industry practices, and the professional judgment of Panacea personnel, it is our opinion that:

- The air samples collected and analyzed during the coring of the asbestos-containing asphalt indicated the airborne fiber concentrations were below and meet the evaluation criteria.

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0009

Date Received: 04-03-23 Received by: Greta G

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify)**:**

Sample Container Temperature: __5.5__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The samples were subcontracted to AIH Laboratory for EPA-600R-93/116. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Samples Received

AETL received the following samples on 04/03/2023 with the following specifications

Client ID: SB-26-D0.5 **Sample Date:** 04/3/2023 12:17

Lab ID: BED0009-01 **Matrix:** Soil **Quantity of Containers:** 4

Method	Analyte	Units	TAT
EPA 600R-93/116	Asbestos by Polarized Light Microscopy Analysis	Percent	5
EPA 6010B	Nickel, total by ICP	mg/kg	5
EPA 6010B	Lead, total by ICP	mg/kg	5
EPA 6010B	Cadmium, total by ICP	mg/kg	5
EPA 6020	Arsenic, total by ICP/MS	mg/kg	5
EPA 7199	Chromium Hexavalent by Ion Chromatography	mg/kg	5
EPA 7471A	Mercury Cold-Vapor Technique	mg/kg	5
EPA 8081A	Organochlorine Pesticides by GC/ECD	ug/kg	5
EPA 8082	Polychlorinated Biphenyls (PCBs)	ug/kg	5
EPA 8270C-SIM	PAH Compounds by GC/MS SIM (Modified 8270C)	mg/kg	5

Client ID: SB-26-D0.5-Dup **Sample Date:** 04/3/2023 12:22

Lab ID: BED0009-02 **Matrix:** Soil **Quantity of Containers:** 4

Method	Analyte	Units	TAT
EPA 600R-93/116	Asbestos by Polarized Light Microscopy Analysis	Percent	5
EPA 6010B	Cadmium, total by ICP	mg/kg	5
EPA 6010B	Lead, total by ICP	mg/kg	5
EPA 6010B	Nickel, total by ICP	mg/kg	5
EPA 6020	Arsenic, total by ICP/MS	mg/kg	5
EPA 7199	Chromium Hexavalent by Ion Chromatography	mg/kg	5
EPA 7471A	Mercury Cold-Vapor Technique	mg/kg	5
EPA 8081A	Organochlorine Pesticides by GC/ECD	ug/kg	5
EPA 8082	Polychlorinated Biphenyls (PCBs)	ug/kg	5
EPA 8270C-SIM	PAH Compounds by GC/MS SIM (Modified 8270C)	mg/kg	5

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
M	The spike recovery for this QC sample is outside of established control limits possibly due to sample matrix interference. Laboratory Control Samples(LCS/LCSD) recovery were acceptable.
R	The RPD was outside of QC acceptance limits due to possible matrix interference.
S6	Surrogate recovery is outside control limits due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Pasadena, CA 91124	Attention:	Justin King		
	Project Name:	Canoga Park High School	Reported:	04/11/2023 12:39

ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

RE: BED0009

Attention: Hailley Coleman

Enclosed are the results for sample(s) received on April 04, 2023 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

Ferdinand Paul Lugtu
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 7199:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 10ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

Comments:

Laboratory Control Spike (LCS) / Laboratory Control Spike Duplicate (LCSD) **6020**

Laboratory Sample #: IR0405231 **Date of Extraction:** 04/05/23 10:00

Analyte	LCS Date of Analysis	LCSD Date of Analysis		SPC CONC	LCS	LCSD	% LCS	% LCSD	RPD	ACP %LCS	ACP RPD	Qualifiers
Arsenic	04/06/23 12:21	04/06/23 12:24	--	20.0	20.8	21.0	104	105	1	80-120	20	--

Data Qualifier Definitions

Qualifier

M3 = The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to spike level. The associated blank spike recovery was acceptable.

27819-001	6020 Soil	Arsenic	MS/MSD

Definition of terms:

R	Result of unspiked laboratory sample used for matrix spike determination.
SP CONC (or Spike Conc.)	Spike concentration added to sample or blank
MS	Matrix Spike sample result
MSD	Matrix Spike Duplicate sample result
%MS	Percent recovery of MS: {(MS-R1) / SP CONC} x100
%MSD	Percent recovery of MSD: {(MSD-R1) / SP CONC} x 100
RPD (for MS/MSD)	Relative Percent Difference: {(MS-MSD) / (MS+MSD)} x 100 x 2
LCS	Laboratory Control Sample result
LCSD	Laboratory Control Sample Duplicate result
%LCS	Percent recovery of LCS: {(LCS) / SP CONC} x100
%LCSD	Percent recovery of LCSD: {(LCSD) / SP CONC} x 100
RPD (for LCS/LCSD)	Relative Percent Difference: {(LCS-LCSD) / (LCS+LCSD)} x 100 x 2
ACP %LCS	Acceptable percent recovery range for Laboratory Control Samples.
ACP %MS	Acceptable percent recovery range for Matrix Spike samples
ACP RPD	Acceptable Relative Percent Difference
D	Detectable, result must be greater than zero
Qual	A checked box indicates a data qualifier was utilized and/or required for this analyte see attached explanation.
ND	Analyte Not Detected

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0009

Date Received: 04-03-23 Received by: Greta G

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.5__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The samples were subcontracted to AIH Laboratory for EPA-600R-93/116. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
S6	Surrogate recovery is outside control limits due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 3ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

Subject: RE: Samples for STLC 6020-4/12/23

Miriam,

Please cancel the STLC-6020 analysis. The client decided that we could run the STLC by 6010 which we do in-house. Please proceed with the total 6020-As on the other samples.

Thank you!

Hailley Coleman
Project Manager

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0009

Date Received: 04-03-23 Received by: Greta G

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.5__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The samples were subcontracted to AIH Laboratory for EPA-600R-93/116. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
B1	This analyte was found in the method blank, which was possibly contaminated during sample preparation. The batch was accepted since this analyte was either not detected or more than 10 times of the blank value for all the samples in the batch.
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.

Pasadena, CA 91124	Attention:	Justin King		
	Project Name:	Canoga Park High School	Reported:	04/25/2023 13:09

MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

RE: BED0009.02

Attention: Hailley Coleman

Enclosed are the results for sample(s) received on April 14, 2023 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

Ferdinand Paul Lugtu
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

Lab Order: N055984

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

CLIENT: American Environmental Testing Laborator
Project: BED0009.02

ASSET Laboratories

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	4/14/2023	Workorder:	N055984
Rep sample Temp (Deg C):	6.2	IR Gun ID:	1
Temp Blank:	☐ Yes ☑ No		
Carrier name:	Walk-In		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☐	No ☑	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☐	No ☑	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☐	No ☐	NA ☑
15. Did the bottle labels indicate correct preservatives used?	Yes ☐	No ☐	NA ☑
16. Were there Non-Conformance issues at login?	Yes ☑	No ☐	NA ☐
Was Client notified?	Yes ☑	No ☐	NA ☐

Comments: See correspondence.

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0011

Date Received: 04-04-23 Received by: Joe Sevrean

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.8__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The samples were subcontracted to AIH Laboratories for EPA 600R-93/116. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
BS	The recovery of this analyte in LCS and/or LCSD was outside control limit. Sample was accepted based on the remaining LCSand/or LCSD.
D	Sample was analyzed under dilution due to matrix interference.
DIL	Result for the compound reported from diluted analysis.
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
M	The spike recovery for this QC sample is outside of established control limits possibly due to sample matrix interference. Laboratory Control Samples(LCS/LCSD) recovery were acceptable.
R	The RPD was outside of QC acceptance limits due to possible matrix interference.
S6	Surrogate recovery is outside control limits due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 6ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

QA/QC Report
for
Metals

Reference #: AETL 27824 Reporting units: ppm

Matrix Spike (MS) / Matrix Spike Duplicate (MSD) **6020**

Laboratory Sample #: 27824-001 **Date of Extraction:** 04/06/23 16:00

Analyte	MS Date of Analysis	MSD Date of Analysis	R1	SPC CONC	MS	MSD	% MS	% MSD	RPD	ACP %MS	ACP RPD	Qualifiers
Arsenic	04/10/23 12:21	04/10/23 12:26	12.0	20.0	30.8	30.2	94	91	2	75-125	20	--

Laboratory Control Spike (LCS) / Laboratory Control Spike Duplicate (LCSD) **6020**

Laboratory Sample #: IR0406231 **Date of Extraction:** 04/06/23 16:00

Analyte	LCS Date of Analysis	LCSD Date of Analysis		SPC CONC	LCS	LCSD	% LCS	% LCSD	RPD	ACP %LCS	ACP RPD	Qualifiers
Arsenic	04/10/23 12:09	04/10/23 12:13	--	20.0	22.2	20.9	111	104	6	80-120	20	--

Definition of terms:

R	Result of unspiked laboratory sample used for matrix spike determination.
SP CONC (or Spike Conc.)	Spike concentration added to sample or blank
MS	Matrix Spike sample result
MSD	Matrix Spike Duplicate sample result
%MS	Percent recovery of MS: {(MS-R1) / SP CONC} x100
%MSD	Percent recovery of MSD: {(MSD-R1) / SP CONC} x 100
RPD (for MS/MSD)	Relative Percent Difference: {(MS-MSD) / (MS+MSD)} x 100 x 2
LCS	Laboratory Control Sample result
LCSD	Laboratory Control Sample Duplicate result
%LCS	Percent recovery of LCS: {(LCS) / SP CONC} x100
%LCSD	Percent recovery of LCSD: {(LCSD) / SP CONC} x 100
RPD (for LCS/LCSD)	Relative Percent Difference: {(LCS-LCSD) / (LCS+LCSD)} x 100 x 2
ACP %LCS	Acceptable percent recovery range for Laboratory Control Samples.
ACP %MS	Acceptable percent recovery range for Matrix Spike samples
ACP RPD	Acceptable Relative Percent Difference
D	Detectable, result must be greater than zero
Qual	A checked box indicates a data qualifier was utilized and/or required for this analyte see attached explanation.
ND	Analyte Not Detected

RE: BED0011

Attention: Hailley Coleman

Enclosed are the results for sample(s) received on April 05, 2023 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

for

Ferdinand Paul Lugtu
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

CLIENT: American Environmental Testing Laborator
Project: BED0011
Lab Order: N055812

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 7199:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery for Hexavalent Chromium in QC samples N055812-001A-MS/MSD possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

CLIENT: American Environmental Testing Laborator

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	4/5/2023	Workorder:	N055812
Rep sample Temp (Deg C):	5.8	IR Gun ID:	1
Temp Blank:	☐ Yes ☑ No		
Carrier name:	Walk-In		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☐	No ☑	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☐	No ☐	NA ☑
15. Did the bottle labels indicate correct preservatives used?	Yes ☐	No ☐	NA ☑
16. Were there Non-Conformance issues at login?	Yes ☑	No ☐	NA ☐
Was Client notified?	Yes ☐	No ☐	NA ☑

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0011

Date Received: 04-04-23 Received by: Joe Sevrean

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.8__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The samples were subcontracted to AIH Laboratories for EPA 600R-93/116. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
R	The RPD was outside of QC acceptance limits due to possible matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Parsons	AETL Job Number:	BED0011	Site:	6850 CA-27
100 West Walnut Street	Project Number:	[none]		Canoga Park, CA 91303
Pasadena, CA 91124	Attention:	Justin King		
	Project Name:	Canoga Park High School	Reported:	04/25/2023 15:09

MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 6ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

Comments:

Matrix Spike (MS) / Matrix Spike Duplicate (MSD) **6020**

Laboratory Sample #: 27824-001 **Date of Extraction:** 04/06/23 16:00

Analyte	MS Date of Analysis	MSD Date of Analysis	R1	SPC CONC	MS	MSD	% MS	% MSD	RPD	ACP %MS	ACP RPD	Qualifiers
Arsenic	04/10/23 12:21	04/10/23 12:26	12.0	20.0	30.8	30.2	94	91	2	75-125	20	--

Laboratory Control Spike (LCS) / Laboratory Control Spike Duplicate (LCSD) **6020**

Laboratory Sample #: IR0406231 **Date of Extraction:** 04/06/23 16:00

Analyte	LCS Date of Analysis	LCSD Date of Analysis		SPC CONC	LCS	LCSD	% LCS	% LCSD	RPD	ACP %LCS	ACP RPD	Qualifiers
Arsenic	04/10/23 12:09	04/10/23 12:13	--	20.0	22.2	20.9	111	104	6	80-120	20	--

Definition of terms:

R	Result of unspiked laboratory sample used for matrix spike determination.
SP CONC (or Spike Conc.)	Spike concentration added to sample or blank
MS	Matrix Spike sample result
MSD	Matrix Spike Duplicate sample result
%MS	Percent recovery of MS: {(MS-R1) / SP CONC} x100
%MSD	Percent recovery of MSD: {(MSD-R1) / SP CONC} x 100
RPD (for MS/MSD)	Relative Percent Difference: {(MS-MSD) / (MS+MSD)} x 100 x 2
LCS	Laboratory Control Sample result
LCSD	Laboratory Control Sample Duplicate result
%LCS	Percent recovery of LCS: {(LCS) / SP CONC} x100
%LCSD	Percent recovery of LCSD: {(LCSD) / SP CONC} x 100
RPD (for LCS/LCSD)	Relative Percent Difference: {(LCS-LCSD) / (LCS+LCSD)} x 100 x 2
ACP %LCS	Acceptable percent recovery range for Laboratory Control Samples.
ACP %MS	Acceptable percent recovery range for Matrix Spike samples
ACP RPD	Acceptable Relative Percent Difference
D	Detectable, result must be greater than zero
Qual	A checked box indicates a data qualifier was utilized and/or required for this analyte see attached explanation.
ND	Analyte Not Detected

RE: BED0011

Attention: Hailley Coleman

Enclosed are the results for sample(s) received on April 05, 2023 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

Ferdinand Paul Lugtu
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

CLIENT: American Environmental Testing Laborator
Project: BED0011
Lab Order: N055812

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 7199:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery for Hexavalent Chromium in QC samples N055812-001A-MS/MSD possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	4/5/2023	Workorder:	N055812
Rep sample Temp (Deg C):	5.8	IR Gun ID:	1
Temp Blank:	☐ Yes ☑ No		
Carrier name:	Walk-In		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☐	No ☑	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☐	No ☐	NA ☑
15. Did the bottle labels indicate correct preservatives used?	Yes ☐	No ☐	NA ☑
16. Were there Non-Conformance issues at login?	Yes ☑	No ☐	NA ☐
Was Client notified?	Yes ☐	No ☐	NA ☑

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0011

Date Received: 04-04-23 Received by: Joe Sevrean

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.8__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The samples were subcontracted to AIH Laboratories for EPA 600R-93/116. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.

NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

Workorder No.: N056032

RE: BED0011.01

Attention: Hailley Coleman

Enclosed are the results for sample(s) received on April 18, 2023 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

for

Ferdinand Paul Lugtu
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

CLIENT: American Environmental Testing Laborator
Project: BED0011.01
Lab Order: N056032

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 6020:

Matrix Spike (MS) is outside recovery criteria for Arsenic in QC sample N056032-001A-MS possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	4/18/2023	Workorder:	N056032
Rep sample Temp (Deg C):	5.8	IR Gun ID:	1
Temp Blank:	☐ Yes ☑ No		
Carrier name:	Walk-In		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☐	No ☑	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☐	No ☐	NA ☑
15. Did the bottle labels indicate correct preservatives used?	Yes ☐	No ☐	NA ☑
16. Were there Non-Conformance issues at login?	Yes ☑	No ☐	NA ☐
Was Client notified?	Yes ☐	No ☐	NA ☑

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0011

Date Received: 04-04-23 Received by: Joe Sevrean

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify)**:**

Sample Container Temperature: __5.8__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The samples were subcontracted to AIH Laboratories for EPA 600R-93/116. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 2ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

Definition of terms:

R	Result of unspiked laboratory sample used for matrix spike determination.
SP CONC (or Spike Conc.)	Spike concentration added to sample or blank
MS	Matrix Spike sample result
MSD	Matrix Spike Duplicate sample result
%MS	Percent recovery of MS: {(MS-R1) / SP CONC} x100
%MSD	Percent recovery of MSD: {(MSD-R1) / SP CONC} x 100
RPD (for MS/MSD)	Relative Percent Difference: {(MS-MSD) / (MS+MSD)} x 100 x 2
LCS	Laboratory Control Sample result
LCSD	Laboratory Control Sample Duplicate result
%LCS	Percent recovery of LCS: {(LCS) / SP CONC} x100
%LCSD	Percent recovery of LCSD: {(LCSD) / SP CONC} x 100
RPD (for LCS/LCSD)	Relative Percent Difference: {(LCS-LCSD) / (LCS+LCSD)} x 100 x 2
ACP %LCS	Acceptable percent recovery range for Laboratory Control Samples.
ACP %MS	Acceptable percent recovery range for Matrix Spike samples
ACP RPD	Acceptable Relative Percent Difference
D	Detectable, result must be greater than zero
Qual	A checked box indicates a data qualifier was utilized and/or required for this analyte see attached explanation.
ND	Analyte Not Detected

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0016

Date Received: 04-05-23 Received by: Lily N.

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.5__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to AIH Laboratory for EPA-600R-93/116. Please see attached report for results.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020-As. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Samples Received

(Continued)

AETL received the following samples on 04/05/2023 with the following specifications

Client ID: SB-14-D0.5 — **Sample Date:** 04/5/2023 11:33

Lab ID: BED0016-48 — **Matrix:** Soil — **Quantity of Containers:** 2

Method	Analyte	Units	TAT
EPA 6010B	Lead, total by ICP	mg/kg	5
EPA 6020	Arsenic, total by ICP/MS	mg/kg	5
EPA 8081A	Organochlorine Pesticides by GC/ECD	ug/kg	5

Client ID: SB-14-D2.0 — **Sample Date:** 04/5/2023 11:37

Lab ID: BED0016-49 — **Matrix:** Soil — **Quantity of Containers:** 1

Method	Analyte	Units	TAT
Archive	Sample On Hold	N/A	0

Client ID: SB-14-D3.0 — **Sample Date:** 04/5/2023 11:41

Lab ID: BED0016-50 — **Matrix:** Soil — **Quantity of Containers:** 1

Method	Analyte	Units	TAT
Archive	Sample On Hold	N/A	0

Client ID: SB-41-D0.5 — **Sample Date:** 04/5/2023 12:37

Lab ID: BED0016-51 — **Matrix:** Soil — **Quantity of Containers:** 2

Method	Analyte	Units	TAT
EPA 6010B	Lead, total by ICP	mg/kg	5

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.

Qualifiers and Definitions

Item	Qualifiers
BS	The recovery of this analyte in LCS and/or LCSD was outside control limit. Sample was accepted based on the remaining LCSand/or LCSD.
D	Sample was analyzed under dilution due to matrix interference.
DIL	Result for the compound reported from diluted analysis.
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
R	The RPD was outside of QC acceptance limits due to possible matrix interference.
S6	Surrogate recovery is outside control limits due to matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Parsons	AETL Job Number:	BED0016	Site:	6850 CA-27
100 West Walnut Street	Project Number:	[none]		Canoga Park, CA 91303
Pasadena, CA 91124	Attention:	Justin King		
	Project Name:	Canoga Park High School	Reported:	04/14/2023 10:51

mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

LABORATORY REPORT FORM

ORANGE COAST ANALYTICAL, INC.

3002 Dow Suite 532 Tustin, CA 92780

(714) 832-0064

Laboratory Certification (ELAP) No.:2576
Expiration Date: 2023
Los Angeles County Sanitation District Lab ID# 10206

Laboratory Director's Name:
Mark Noorani

Client:	American Environmental Testing Laboratory
Laboratory Reference:	AETL 27831
Project Name:	BED0016
Project Number:	BED0016
Date Received:	4/6/2023
Date Reported:	4/12/2023
Chain of Custody Received:	☑
Analytical Method:	6020,

Mark Noorani, Laboratory Director

Lab Reference #: AETL 27831
Project Name: BED0016
Project #: BED0016

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 3ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

Comments:

None

Definition of terms:

R	Result of unspiked laboratory sample used for matrix spike determination.
SP CONC (or Spike Conc.)	Spike concentration added to sample or blank
MS	Matrix Spike sample result
MSD	Matrix Spike Duplicate sample result
%MS	Percent recovery of MS: {(MS-R1) / SP CONC} x100
%MSD	Percent recovery of MSD: {(MSD-R1) / SP CONC} x 100
RPD (for MS/MSD)	Relative Percent Difference: {(MS-MSD) / (MS+MSD)} x 100 x 2
LCS	Laboratory Control Sample result
LCSD	Laboratory Control Sample Duplicate result
%LCS	Percent recovery of LCS: {(LCS) / SP CONC} x100
%LCSD	Percent recovery of LCSD: {(LCSD) / SP CONC} x 100
RPD (for LCS/LCSD)	Relative Percent Difference: {(LCS-LCSD) / (LCS+LCSD)} x 100 x 2
ACP %LCS	Acceptable percent recovery range for Laboratory Control Samples.
ACP %MS	Acceptable percent recovery range for Matrix Spike samples
ACP RPD	Acceptable Relative Percent Difference
D	Detectable, result must be greater than zero
Qual	A checked box indicates a data qualifier was utilized and/or required for this analyte see attached explanation.
ND	Analyte Not Detected

Workorder No.: N055842

RE: BED0016

Attention: Hailley Coleman

Enclosed are the results for sample(s) received on April 06, 2023 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

Ferdinand Paul Lugtu
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	4/6/2023	Workorder:	N055842
Rep sample Temp (Deg C):	4.6	IR Gun ID:	1
Temp Blank:	☐ Yes ☑ No		
Carrier name:	Walk-In		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☐	No ☑	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☐	No ☐	NA ☑
15. Did the bottle labels indicate correct preservatives used?	Yes ☐	No ☐	NA ☑
16. Were there Non-Conformance issues at login?	Yes ☑	No ☐	NA ☐
Was Client notified?	Yes ☐	No ☐	NA ☑

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0016

Date Received: 04-05-23 Received by: Lily N.

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.5__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to AIH Laboratory for EPA-600R-93/116. Please see attached report for results.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020-As. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
B1	This analyte was found in the method blank, which was possibly contaminated during sample preparation. The batch was accepted since this analyte was either not detected or more than 10 times of the blank value for all the samples in the batch.
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
R	The RPD was outside of QC acceptance limits due to possible matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

100 West Walnut Street	Project Number:	[none]		Canoga Park, CA 91303
Pasadena, CA 91124	Attention:	Justin King		
	Project Name:	Canoga Park High School	Reported:	04/25/2023 15:23

MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 3ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

Analyte	LCS Date of Analysis	LCSD Date of Analysis		SPC CONC	LCS	LCSD	% LCS	% LCSD	RPD	ACP %LCS	ACP RPD	Qualifiers
Arsenic	04/12/23 09:20	04/12/23 09:24	--	20.0	21.7	21.9	109	109	1	80-120	20	--

Definition of terms:

R	Result of unspiked laboratory sample used for matrix spike determination.
SP CONC (or Spike Conc.)	Spike concentration added to sample or blank
MS	Matrix Spike sample result
MSD	Matrix Spike Duplicate sample result
%MS	Percent recovery of MS: {(MS-R1) / SP CONC} x100
%MSD	Percent recovery of MSD: {(MSD-R1) / SP CONC} x 100
RPD (for MS/MSD)	Relative Percent Difference: {(MS-MSD) / (MS+MSD)} x 100 x 2
LCS	Laboratory Control Sample result
LCSD	Laboratory Control Sample Duplicate result
%LCS	Percent recovery of LCS: {(LCS) / SP CONC} x100
%LCSD	Percent recovery of LCSD: {(LCSD) / SP CONC} x 100
RPD (for LCS/LCSD)	Relative Percent Difference: {(LCS-LCSD) / (LCS+LCSD)} x 100 x 2
ACP %LCS	Acceptable percent recovery range for Laboratory Control Samples.
ACP %MS	Acceptable percent recovery range for Matrix Spike samples
ACP RPD	Acceptable Relative Percent Difference
D	Detectable, result must be greater than zero
Qual	A checked box indicates a data qualifier was utilized and/or required for this analyte see attached explanation.
ND	Analyte Not Detected

RE: BED0016

Attention: Hailley Coleman

Enclosed are the results for sample(s) received on April 06, 2023 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

Ferdinand Paul Lugtu
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

Lab Order: N055842

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

CLIENT: American Environmental Testing Laborator
Project: BED0016
Lab Order: N055842

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	4/6/2023	Workorder:	N055842
Rep sample Temp (Deg C):	4.6	IR Gun ID:	1
Temp Blank:	☐ Yes ☑ No		
Carrier name:	Walk-In		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☐	No ☑	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☐	No ☐	NA ☑
15. Did the bottle labels indicate correct preservatives used?	Yes ☐	No ☐	NA ☑
16. Were there Non-Conformance issues at login?	Yes ☑	No ☐	NA ☐
Was Client notified?	Yes ☐	No ☐	NA ☑

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0016

Date Received: 04-05-23 Received by: Lily N.

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.5__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to AIH Laboratory for EPA-600R-93/116. Please see attached report for results.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020-As. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

RE: BED0016.01

Attention: Corey Jones

Enclosed are the results for sample(s) received on April 18, 2023 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562) 219-7435 if I can be of further assistance to your company.

Sincerely,

Ferdinand Paul Lugtu
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - California.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 6020:

Matrix Spike (MS) is outside recovery criteria for Arsenic in QC sample N056032-001A-MS possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	4/18/2023	Workorder:	N056034
Rep sample Temp (Deg C):	5.8	IR Gun ID:	1
Temp Blank:	☐ Yes ☑ No		
Carrier name:	Walk-In		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☐	No ☑	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☐	No ☐	NA ☑
15. Did the bottle labels indicate correct preservatives used?	Yes ☐	No ☐	NA ☑
16. Were there Non-Conformance issues at login?	Yes ☑	No ☐	NA ☐
Was Client notified?	Yes ☐	No ☐	NA ☑

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0016

Date Received: 04-05-23 Received by: Lily N.

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.5__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to AIH Laboratory for EPA-600R-93/116. Please see attached report for results.

The samples were subcontracted to Orange Coast Analytical, Inc. for EPA 6020-As. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
B1	This analyte was found in the method blank, which was possibly contaminated during sample preparation. The batch was accepted since this analyte was either not detected or more than 10 times of the blank value for all the samples in the batch.
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°F	Degrees Fahrenheit
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
Cresols	3-methylphenol/4-methylphenol coelute and cannot be chromatographically separated. Due to this coeluting isomer pair phenomenon, the laboratory uses a single cresol (4-methylphenol) as calibration standard for 3-methylphenol/4-methylphenol.
CRM	Certified Reference Material
DPD	Department of Planning and Development
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GC/FID	Gas Chromatography Flame Ionization Detection
GRO	Gasoline Range Organics
HC	Hydrocarbon
HEM	Hexane Extractable Material
HMU	Hazardous Material Unit
ICP/MS	Inductively Coupled Plasma Mass Spectrometry
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
ml/L/hr	Milliliter per Liter per Hour
MRO	Motor oil Range Organics

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
ORO	Oil Range Organics
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
ppb v	Parts per billion by volume
ppmC	Parts per million Carbon
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SM	Standard Method
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 2ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

COOLER RECEIPT FORM

Client Name: Parsons

Project Name: Canoga Park High School Project No.:

AETL Job Number: BED0024

Date Received: 04-06-23 Received by: Chantal A.

Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐Others:

Samples were received in: ☑ Cooler (__2_____) ☐ Other (Specify):

Sample Container Temperature: __5.9__ °C IR Gun S/N: 51941911MV

Type of sample containers: ☐ VOA, ☐ Glass bottles, ☑Wide mouth jars, ☐HDPE bottles, ☐ Metal sleeves, ☐ Acetate sleeves, ☐ 5035 Kit: ☐ AETL or ☐ Client, ☐ Tedlar Bags, Summa Canister: ☐ 6L, ☐ 3L, ☐ 1L, Others (Specify): _____

How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No	N/A	Note or Comment
1. Are the COCs Correct?	✔			
2. Are Sample labels legible & indelible ink?	✔			
3. Do samples match the COC?	✔			
4. Are the required analyses clear?	✔			
5. Is there enough samples for required analysis?	✔			
6. Does cooler or samples have custody seal(s)?			✔	
7. Are sample containers in good condition?	✔			
8. Are samples preserved?	✔			
9. Are samples preserved properly for the intended analysis?	✔			
10. Are the VOAs free of headspace? See footnote.			✔	
11. Are the jars free of headspace?			✔	

* = see note below. N/A = Not Applicable

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

◯ Example maximum headspace bubble size; acceptance criteria not to exceed 5-6 mm in diameter.

For headspace bubbles exceeding 6 mm in diameter, sample receiving will tag the VOA and notify the Project Manager. The Project Manager will contact client for Analyze or Resample instructions.

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Qualifiers are noted in the report.

The samples were subcontracted to AIH Laboratory for EPA-600R-93/116. Please see attached report for results.

The samples were subcontracted to Orange Coast Analytical for EPA 6020-As. Please see attached report for results.

The samples were subcontracted to Asset Laboratories for EPA 7199. Please see attached report for results.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.
