*Teachers will use the code to join the **Group** in Schoology.*

Algebra 1 Intervention Program

This program provides targeted intervention that is linked to the students' instructional needs in Algebra 1. It can be offered within CC Algebra 1 or Algebra 1 Tutorial Lab or before or after school. Intervention is given in real time and students are free to move in and out of the intervention program based on mastery of Algebra 1 concepts.

Process:

- Students receive instruction; and are assessed on learning target from the unit they missed.
- Students participate in center-based sessions.
- Teachers assess students' performance on learning targets using rubric.

Logistics:

- Algebra 1 teachers review which learning targets the students need.
- Intervention teacher assigns the units.
- Once students have mastered the standard, it is reflected in Algebra 1 grades.

Operations:

- Identify students who need intervention and which learning target (s) students need.
- Assign applicable learning targets and provide targeted instruction.
- Students work on learning targets and take formative assessments until targets are met.
